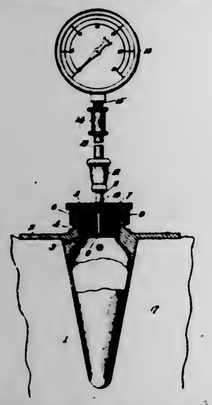
2,005,590
TELEPHONE SYSTEM
John Meszar, Bogota, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1934, Serial No. 746,035
5 Claims. (Cl. 179—41)

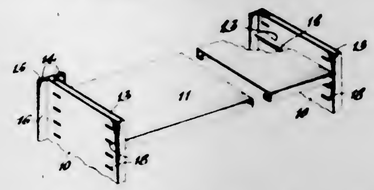
1. In a signaling system, an outward operator's position, a line extending therefrom and terminating at a plurality of different operators' positions, line signals at each of said distant positions, a source of alternating signaling current at each end of the line, means at the outward position for connecting its associated source of current to the line as a connect signal, means at the other end of the line responsive to said transmitted connect signal to operate the line signal at one of said positions and to connect the signal current source thereat to the line as an answer-back signal, means at the outward position responsive to said answer-back signal to dis-



connect said connect signal current from the line, and operator controlled means at the outward position adapted to accelerate disconnection of the connect signal in response to the answer-back signal whereby the connect signal is shortened, and means at the distant end of the line responsive to said shorter connect signal impulse to prevent the line signal from operating at said one position and to operate the line signal at the other position.

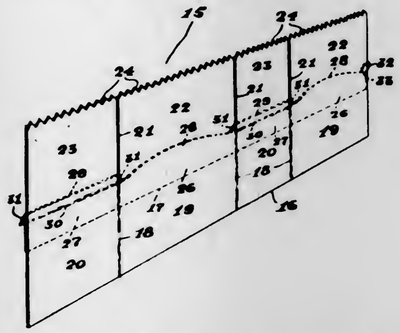
2,005,591
METHOD OF MAKING DIES
George R. Meyercord, Chicago, Ill., assignor, by mesne assignments, to Reconstruction Finance Corporation, a Federal corporation
Application May 27, 1933, Serial No. 673,175
16 Claims. (Cl. 76—107)

1. The method of producing working face plates for complementary forming dies, which comprises the casting of rough complementary metal blocks of the proper shape, and forcing said blocks together under heavy pressure while having between their die faces a stack of sheets comprising upper and lower sheets of soft metal, such as lead, and intermediate sheets including sheets of hard ductile metal in contact with the lead sheets.



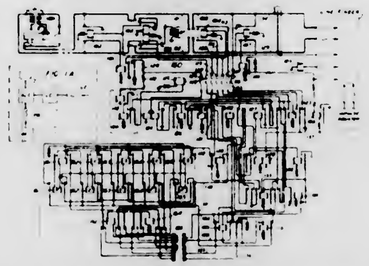
2,005,592
METHOD AND APPLIANCE FOR DETERMINING DEGREE OF DOUGH FERMENTATION
Francis X. Nedler, Arkansas City, Kans., assignor of one-half to Martha Nedler, Arkansas City, Kans.
Application January 19, 1934, Serial No. 707,296
4 Claims. (Cl. 73—51)

1. An appliance for determining the gas pressure developed by a batch of dough which comprises an air-tight container having a marginal flange limiting embedment of the container in the dough mass, the container having an opening for ingress of a piece of dough, a cap for sealing the opening, and means for indicating pressure of gases of fermentation arising from the piece of dough.



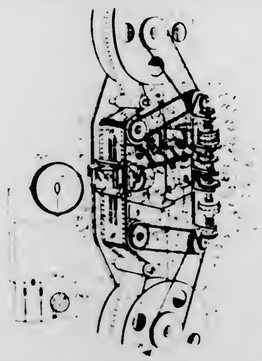
4. A process of determining the desired degree of fermentation in a dough batch regardless of a loss of temperature by the batch and the time of fermentation, which comprises confining a sample of the batch, maintaining a heat transmitting relation between the batch and sample so that the latter shall always stand at the temperature of the former regardless of its variations in temperature, and determining the degree of fermentation of the sample by measuring the gases evolved by said sample.

2,005,593
SHELVING
Herbert J. Onions and Robert E. Sandberg, Warren, Pa., assignors to De Luxe Metal Furniture Company, a corporation of Pennsylvania
Application July 11, 1933, Serial No. 679,928
5 Claims. (Cl. 211—136)



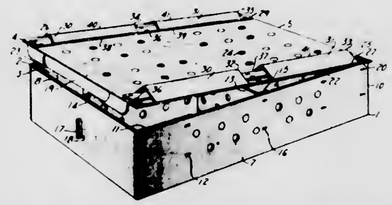
2. In a shelving unit, the combination of a pair of uprights having openings therein, shelf-supporting members applied to the opposing faces of said uprights and each having upstanding portions thereon engaging said openings in interlocking relation therewith, each of said members having a recess in its rear edge forming an opening between the same and the adjoining upright-wall, and shelves disposed between said supporting members and each having a depending flange at each end thereof engaging in the recess of the companion supporting member.

2,005,594
LINER FOR FRUIT BOXES
Carl E. Ridgway, Seattle, Wash.
Application October 15, 1932, Serial No. 637,941
9 Claims. (Cl. 217—3)



1. A liner for a fruit box comprising a liner sheet, a reinforcing collar attached to said liner sheet, and means carried by said collar for supporting the liner sheet within the fruit box while the same is being packed.

2,005,595
TELEPHONE SYSTEM
Frank A. Roome and Hans W. Haffter, Antwerp, Belgium, assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 26, 1933, Serial No. 690,970
In Belgium October 21, 1932
10 Claims. (Cl. 179—18)

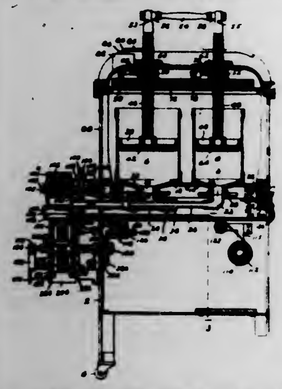


1. In an automatic or semi-automatic telephone system, subscribers' lines entitled to different classes of service, and a discriminating circuit for said lines comprising means responsive to the initiation of a call by one of said lines for connection with said line, and means for determining the class of service to which said calling line is entitled.

2,005,596
SOUND REPRODUCTION PROJECTOR
Gordon Brown Scheibell, Newark, N. J.
Application April 11, 1930, Serial No. 443,398
31 Claims. (Cl. 179—100.3)

1. In a sound reproducing apparatus, a reversible reel mechanism carrying a film, said film having sound recorded thereon in adjacent channels with the sound record in one channel extending in one direction and the sound record in the adjacent channel extending in the opposite direction, a light source disposed on one side of said film, a photo-electric cell on the opposite side of said film, a pair of prism members independently aligned with said sound records, a light aperture for directing light rays from said light source through one or the other of said prisms and incident upon said photoelectric cell in accordance with the sound channel being reproduced, and means controlled at the limit of travel of said film in one direction for shifting said light aperture from a position registering with one of said sound channels in alignment with one of said prisms and to a position registering with the other of said sound channels in alignment with the other of said prisms.

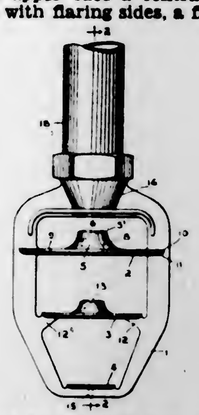
2,005,597
CONTAINER
Edward H. Siler, Lawrence, Kans., assignor to The Lawrence Paper Company, Lawrence, Kans., a corporation of Kansas
Application December 6, 1933, Serial No. 701,114
5 Claims. (Cl. 229—6)



1. A container of the character described including an apertured portion having lateral extensions on the side edges thereof and folded to form rail portions for spacing an object that may be placed on the container in spaced relation with said apertures, an attaching strip integral with said rail portions and having ends extending beyond the rail portions, and means for securing said ends of the attaching strip to the apertured portion.

2,005,598
DEVICE FOR INTRODUCING DRY GRANULAR MATERIALS INTO THE SOIL
August L. Smith, Harrison, N. Y.
Application January 3, 1935, Serial No. 198
14 Claims. (Cl. 111—96)

1. A device of the character described comprising a body portion having a connected discharge tube, a closure member at the discharge end of said tube normally closing the same and being projectable therefrom to open the tube, and cleaning means within the tube operative to remove material therefrom when the closure member is in open position.

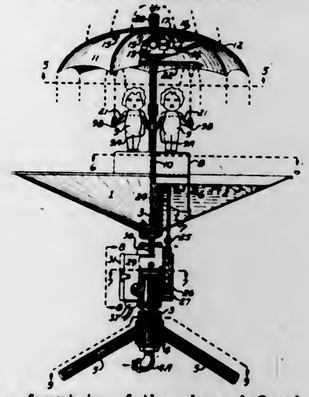


2,005,599
AUTOMATIC FOOD MOLDING AND WRAPPING MACHINE
William Stricker, Kansas City, Mo.
Application October 13, 1933, Serial No. 693,430
13 Claims. (Cl. 93—7)

1. In a machine of the character described, a rotary carrier, mechanism for rotating said carrier step by step, trays spaced apart and operably mounted upon said carrier for the reception of wrappers and articles to be wrapped therein, the distance between trays being equal to each step of the carrier, folding devices operably mounted upon the carrier for folding the wrappers longitudinally around the respective articles, means for operating said folding devices while the carrier is in motion, pairs of blades reciprocably mounted upon the carrier for partially folding the ends of said wrappers around the ends of the respective articles, reciprocatory members having means for successively moving said blades outwardly a limited distance to partially fold the ends of the respective wrappers as specified and while the carrier is in motion, mechanism for moving said reciprocatory members outwardly, while the carrier is at rest, to effect greater outward movement of the blades and thereby further fold the ends of the respective wrappers and then restoring said reciprocatory members to their inward position to return the blades to their partially outward position, a trough for cooperating with the blades in folding the ends of the wrappers as said blades travel through said greater outward movement, cooperating means on each pair of blades and the respective trays for drawing the latter outwardly as said blades travel through said greater outward movement, resilient means for restoring the respective trays to their inward position as the blades move inwardly, means for depositing the partially wrapped articles into the trough as the respective trays return to their inward position, and means for completing the end folding operation of the wrappers.

2,005,600
DISTRIBUTOR NOZZLE
Alexander Bennell Tappen, Briarcliff Manor, N. Y., assignor to The Cooling Tower Co. Inc., New York, N. Y., a corporation of New York
Application July 28, 1932, Serial No. 625,332
5 Claims. (Cl. 299—121)

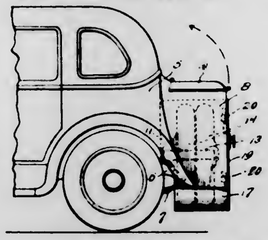
1. In a device of the character described, means for spraying water comprising a source of supply having a delivery port and a plate positioned below and spaced from said port, said plate having on its upper face a centrally apertured raised section with flaring sides, a flat horizontal



annular surface surrounding said raised section and having a sharp marginal edge.

2,005,601
PICKLING OF FERROUS METALS
William P. ter Horst, Bay Village, Ohio, assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application November 17, 1934, Serial No. 753,511
21 Claims. (Cl. 148—8)

1. In the pickling of ferrous metals, the method of inhibiting corrosion of the metal being pickled comprising pickling in the presence of spin bath solution that has been employed in the viscose process of manufacturing artificial silk.

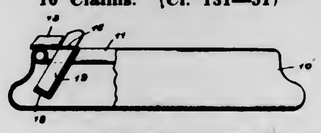


2,005,602
COMBINATION FOUNTAIN AND BIRD BATH
Frederick Thomson, Port Huron, Mich.
Application May 28, 1934, Serial No. 727,867
7 Claims. (Cl. 299—4)

1. In a fountain of the class defined, a bowl supported by a vertically arranged tube, the upper end of said tube extending within said bowl to such a point as to form an overflow for water in said bowl, a hub with legs attached thereto, the lower end of said tube threadedly engaging said hub, a water outlet secured to the bottom of said hub.

2,005,603
[WITHDRAWN]

2,005,604
TOOL CHEST AND SPARE WHEEL CARRIER FOR AUTOMOBILES
Emily Thrine, Battle Creek, Mich.
Application May 9, 1933, Serial No. 670,158
1 Claim. (Cl. 296—37)

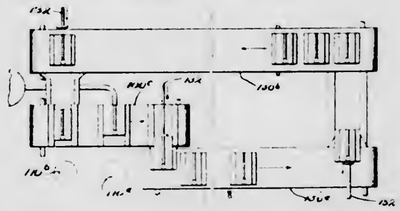


In combination with an automobile, a tool chest and spare wheel carrier including a receptacle built on the rear of the automobile body as an integral rearward extension thereof and with the upper front wall of the receptacle constituting part of the rear wall of the automobile body, the lower front portion of said receptacle being offset rearwardly to provide a substantially horizontal front wall portion resting upon the side frame members of the automobile chassis, an angular plate extending across the receptacle against the front wall of the latter at the offset and secured at its ends upon the side frame members of the automobile chassis, a spare wheel supporting shaft rigid with and projecting rearwardly from said angular plate intermediate its ends and within the receptacle, and a door for the rear of said receptacle permitting access to and removal of the spare wheels carried by said supporting shaft.

2,005,605
PROCESS AND BATH FOR PICKLING METALS
Vanderveer Voorhees, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application November 28, 1931, Serial No. 577,859
7 Claims. (Cl. 148—8)

1. A pickling bath comprising a dilute acid and a relatively small quantity of organic bases separated from shale oil.

2,005,606
SAFETY ASH TRAY
Byron T. Wall, Raymond, Alberta, Canada
Application November 15, 1934, Serial No. 753,193
In Canada November 17, 1933
10 Claims. (Cl. 131—51)

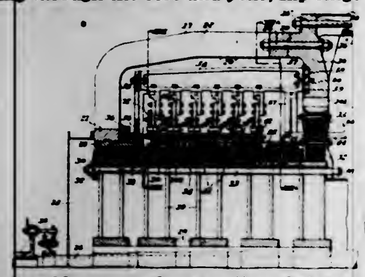


1. In a safety ash tray, a rest for cigars or cigarettes, a hood member, a heat responsive member arranged to be influenced from the combustion of a lighted cigar or cigarette to move the hood member into position with the cigar or cigarette to smother and stop combustion.

2,005,607
COUPLING FOR BOGIE AXLES
Pierre Marcel Bourdon, Paris, France, assignor to Michelin et Cie, Clermont-Ferrand, France, a corporation of France
Application April 3, 1934, Serial No. 718,864
In France April 13, 1533
6 Claims. (Cl. 105—194)

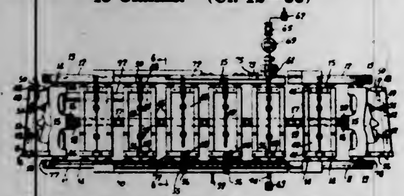
1. In a bogie, a frame having a pair of carrier axles and a pair of pilot axles vertically movable therein, a spring mounted intermediately upon each carrier axle, anchors between the remote ends of the springs and the frame, a rocking arm mounted intermediately on the frame between the carrier axles, shackles between the opposite ends of the rocking arm and the adjacent ends of the springs for yieldably suspending the carrier axles in the frame, springs for the pilot axles and a leverage system between the carrier axles and the springs of the pilot axles to transmit motion from one axle to the other axles.

2,005,608
APPARATUS FOR USE IN MAKING FOOTWEAR
William H. Bresnahan, Lynn, Mass., assignor, by mesne assignments, to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application October 5, 1928, Serial No. 310,594
38 Claims. (Cl. 12—36)



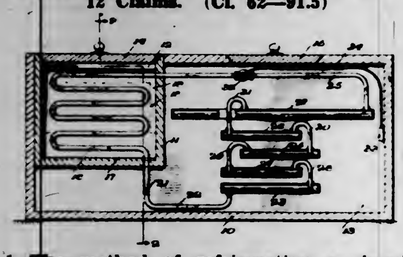
27. Sole pressing apparatus comprising a plurality of presses each having shoe supporting means and a pressure pad, elongate conveyor means on which said presses are mounted, means for moving said conveyor means in a path including a rectilinear traverse, said path having a loading station at one portion thereof, and means at said station for increasing the pressure between a pressure pad and a shoe, the path of said conveyor means being sufficiently long to enable work in each press to set between successive arrivals of such press at the loading station.

2,005,609
DYNAMO-ELECTRIC MACHINE
James V. Caputo, Crafton, Pa.
Application September 8, 1933, Serial No. 688,642
63 Claims. (Cl. 171—212)



1. In a homopolar generator, a magnetic yoke, an annular core coaxial therewith mounted for rotation relative to said yoke, a plurality of field windings distributed axially of said core, induc-

tors embedded in said core for cutting the flux passing through the core and yoke, slip rings car-

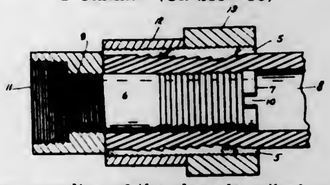


ried on said core, and connections between said inductors and said slip rings.

2,005,610
SOLE AFFIXING MACHINE
William C. Card, Jr., Waverly, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application June 27, 1929, Serial No. 373,973
45 Claims. (Cl. 12—36)

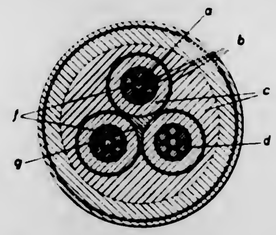
1. In a machine of the class described, in combination, a movable flexible elongate carrier, a plurality of shoe presses mounted on said carrier and adapted to be moved through a circuitous path thereby, each of said presses including an inflatable pressure pad and means for clamping a shoe thereagainst; means including an air supply source at a predetermined position along said circuitous path for thereafter increasing the pressure of the pad against the shoe, means for subsequently decreasing the pad pressure, and means for positively releasing said clamping means.

2,005,611
DRY ICE REFRIGERATING SYSTEM
William W. Carson, Jr., Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a corporation of Delaware
Application June 6, 1933, Serial No. 674,573
12 Claims. (Cl. 62—91.5)



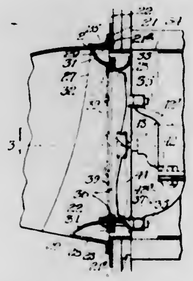
1. The method of refrigerating a chamber which includes the steps of condensing a vaporizable liquid in heat interchanging relation with solid carbon dioxide or the like, flowing the condensed liquid by gravity to an evaporator in said chamber, absorbing heat from said chamber at a series of vertically distributed levels in said chamber by evaporating some of said liquid at each of said levels while raising unevaporated liquid to the next higher level by the vapor formed at each level until the main portion of said liquid reaches a main evaporator disposed adjacent the upper portion of the chamber to be refrigerated, evaporating the liquid in said upper evaporator to maintain the desired temperature within said chamber, and returning the vapor evolved from said main evaporator to said coil for recondensation.

2,005,612
FOUNDATION GARMENT
Katherine E. Cunningham, New Haven, Conn., assignor to I. Newman & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application November 23, 1933, Serial No. 699,462
7 Claims. (Cl. 2—30)



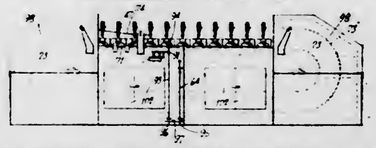
1. A foundation garment of the character described including a corset body open at the front, lacing for drawing said opening together, an elastic vest arranged beneath the front portion of the corset body and extending across said opening, said body having a second opening extending from the top downwardly, and a slide fastener for drawing said second opening together and bringing said elastic vest under tension, said lacing acting to pull the corset body to relieve said tension.

2,005,613
HOSE COUPLING
George Davis and Jack H. Davis, Dallas, Tex.
Application July 6, 1934, Serial No. 734,050
1 Claim. (Cl. 285—86)



A hose coupling of the class described comprising a member having its major portion of cylindrical shape and of the same exterior diameter throughout, the rest of the member being reduced and of non-circular shape in cross section, said reduced part having a threaded bore therein, the inner portion of which is of considerable less diameter than the interior diameter of the major portion, said major portion being externally screw threaded and having longitudinally extending slits therein terminating short of the inner end thereof, the interior faces of the segments formed by the slits having teeth thereon, the toothed parts gradually increasing in thickness toward the outer end of the member, a nipple having one end threaded in the inner portion of the bore of the non-circular portion with the rest of the nipple extending into a hose placed between the same and the first mentioned member, said nipple having its major portion forming an uninterrupted cylinder with teeth of annular form on the major portion of the exterior thereof for cooperating with the teeth of the first mentioned member for holding a portion of a hose between the two members and a nut threaded on the outer portion of the member.

2,005,614
RUBBER INSULATED CABLE
Josef Fassbender, Cologne-Nippes, Germany, assignor to Land und Seekabelwerke A. G., Cologne-Nippes, Germany
Application January 6, 1932, Serial No. 585,085
In Germany January 15, 1931
6 Claims. (Cl. 173—264)

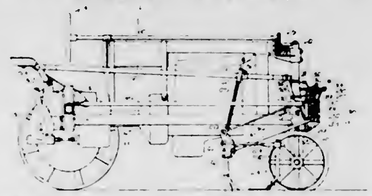


1. A cable having metallic parts, a layer of a vulcanized rubber mixture constituting the actual insulation and a layer of gutta-percha between the metallic parts and the rubber insulation, which layer of gutta-percha is thin as compared with the thickness of the rubber insulation and serves to fill up the hollow spaces between the metallic parts and the rubber insulation and to cement the metallic parts with the rubber insulation during the vulcanization of the cable.

2,005,615
VENTILATING MEANS
Robert G. Ferris, Harvard, Ill., assignor to Starline, Inc., Harvard, Ill., a corporation of Illinois
Application July 31, 1933, Serial No. 683,079
8 Claims. (Cl. 98—43)

4. In combination with a building a wall of which contains an opening communicating with the interior of the building, a structure at said opening and containing a circular opening therethrough and having a constricted portion, a series of hingedly supported louvers in said circular opening at said constricted portion, and means for forcing air through said opening.

2,005,616
SOLE-AFFIXING MACHINE
Eric T. Franzen, Maplewood, and Arthur J. Weiss, West Orange, N. J., assignors to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application December 18, 1929, Serial No. 414,849
21 Claims. (Cl. 12—36)

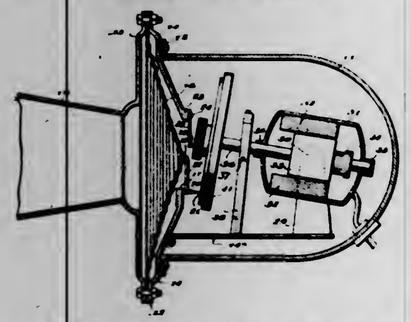


1. In combination, a shoe press having a pad, means for clamping a shoe thereagainst, and supporting means for said press comprising a flexible elongate conveyor means for holding said press in loading position with its face downwardly inclined toward the operator, a portion of said angle of inclination being due to an inclined surface on the supporting means and the remainder thereof being due to the formation of the press.

2,005,617
PROCESS FOR SIMULTANEOUS PRODUCTION OF AVAILABLE PHOSPHORIC ACID AND AVAILABLE LESS COMMON ELEMENTS
Frederick William Genz, Richmond, Va., assignor to Virginia-Carolina Chemical Corporation, Richmond, Va., a corporation of Virginia
No Drawing. Application September 12, 1932, Serial No. 632,866
3 Claims. (Cl. 71—7)

1. Process for the simultaneous production in a single reaction of a mixed fertilizer of available phosphoric acid, and available compounds of elements in the following group, manganese, zinc, copper and magnesium, comprising mixing phosphate rock and a carbonate of an element or elements selected from the said group in which carbonate or carbonates the content of the said selected element or elements is sufficient to give a proportion by weight of said element or elements of 3.58% of the reaction mixture, and treating the mixture with a re-agent commonly effective in combining both constituents of the mixture into plant available compounds.

2,005,618
TRACTOR CULTIVATOR
William S. Graham, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application October 18, 1934, Serial No. 748,798
11 Claims. (Cl. 97—47)

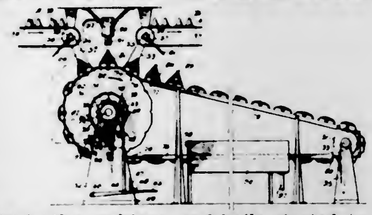


1. The combination of a tractor having fixed supporting means extending forwardly on the front end of the tractor, a transversely extending member loosely carried on said supporting means for translative movement horizontally with respect thereto and projecting beyond each side of the tractor, means on the tractor for shifting said member axially, a thrust member

connected to each projecting portion of the transverse member by a vertical pivot and similarly connected to the rear portion of the tractor, tillage tools having dragbars trailing from the projecting portions of the transverse member, and means whereby the horizontal translative movement of the transverse member is limited.

2,005,619
ESTERS OF ACIDS OF PHOSPHORUS
George De Witt Graves, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 10, 1934, Serial No. 752,465
22 Claims. (Cl. 260—99.20)

1. A mixture of esters of an acid of phosphorus obtainable by reacting one molecular proportion of an esterifying derivative of an acid of phosphorus with a mixture of alcohols containing at least one molecular proportion of primary monohydric a-cyclic alcohols of at least 8 carbon atoms and at least one molecular proportion of at least one member of the group consisting of phenols and primary monohydric a-cyclic alcohols different from one of the first mentioned alcohols.



2,005,620
VEHICLE HORN
Joseph E. Griffin, Savannah, Ga.
Application August 29, 1932, Serial No. 630,918
4 Claims. (Cl. 177—7)

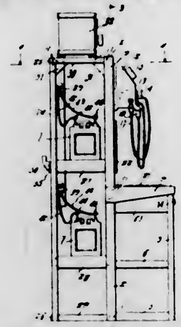
3. A signal comprising a casing section having a central opening and comprising a support, a bearing on said support, a diaphragm mounted on one side of the section and having a stylus extending through the opening to the other side of the section and resting on the bearing, a second stylus mounted on the support, a turntable having a record with a sound groove engageable with the diaphragm and stylus, securing means to fasten the record on the turntable having a matching groove engageable with the second stylus, an armature-shaft assemblage carrying the turntable, a motor having field coils for revolving the assemblage, said assemblage being shiftable with respect to said coils, and a mounting with respect to which the motor is movable.

2,005,621
APPARATUS FOR SUBJECTING SHOES AND OTHER ARTICLES TO PRESSURE
Otto Habicht, Frankfort-on-the-Main, Germany, assignor to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application November 1, 1928, Serial No. 316,515
Renewed November 9, 1934
24 Claims. (Cl. 12—36)

9. An apparatus for subjecting articles to pressure, comprising a conveyer chain composed of movably connected links, expansible cushions on said links, means for supplying a medium under pressure to said cushions, movable members arranged to engage said articles on the side op-

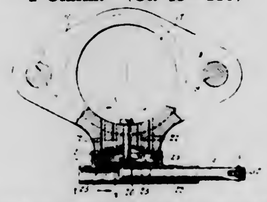
posite to the cushions, and balls pivoted to said links and arranged to engage said members, to hold articles mounted on said links, against the pressure exerted by the expanded cushions.

2,005,622
HOSE SUPPORTER
Michael Hawie, Greens Farms, Conn.
Application March 11, 1935, Serial No. 10,516
2 Claims. (Cl. 24—245)



1. Attaching means for a hose supporter comprising a rigid loop member and a flexible tab member cooperable therewith, said tab member consisting of a piece of flexible textile tape provided at one end with a transverse rubber abutment having interlocking connection with the upper portion of the loop and provided at its opposite end with a rubber button adapted to interlock with the lower portion of the loop member, the button and abutment being secured to the tape and being connected together by the tape only.

2,005,623
STORAGE BATTERY CHARGING RACK AND DISPLAY STAND
Benjamin F. W. Heyer, Bloomfield, N. J., assignor to Atlas Supply Company, Newark, N. J., a corporation of Delaware
Application July 22, 1931, Serial No. 552,530
4 Claims. (Cl. 136—173)

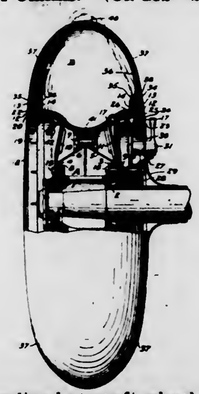


1. A combined storage battery charging rack and display stand comprising a vertically disposed imperforate panel, rear uprights of substantially the same height as the panel arranged at one side thereof, superposed horizontal shelf members rigidly connected to the panel and rear uprights, a battery charger element supported by one of said shelf members, non-corrosive trays supported by said shelf members and containing rigid non-corrosive grids on which batteries may rest during charging, each tray having an endless boundary wall of substantially the same height as the grids electric conductors leading from said element to points adjacent to the grids adapted to be attached to batteries to be charged,

shorter uprights positioned forwardly of the panel and rigidly connected to the latter, a table member supported by the shorter uprights and

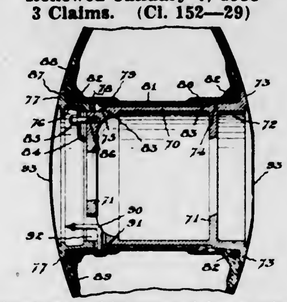
panel and adapted to support a battery while the latter is being tested, and battery display shelves arranged beneath the table member and connected to the panel and shorter uprights.

2,005,624
GAS AND AIR MIXING DEVICE
Marion F. Kowalski, New York, N. Y.
Application July 18, 1934, Serial No. 735,874
1 Claim. (Cl. 48—180)



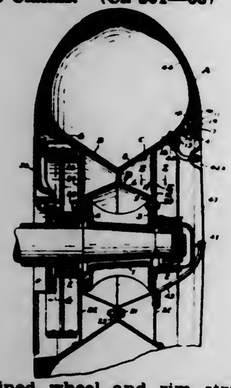
A gas and air mixing device comprising a part having means for securing it in place and provided with an open mixing passage for mixing vaporized liquid fuel and air, said part having a plurality of air passages therein communicating with said mixing passage, a tubular member, complemental cups on said first part and the tubular member respectively, and together forming a chamber, means to detachably secure the cups to each other, said air passages communicating with said chamber, said tubular member having a plurality of air inlet ports therein communicating with said chamber, and a valve member slidable in said tubular member to open and close said air passages and ports, to control the inflow of air through said tubular member, ports, chamber and passages into said mixing passage.

2,005,625
SALIVA EJECTOR
Anthony M. La Riche, Cleveland, Ohio, assignor to Detroit Dental Manufacturing Co., Detroit, Mich., a corporation of Michigan
Application October 5, 1931, Serial No. 566,928
Renewed January 30, 1935
10 Claims. (Cl. 32—33)



2. In a saliva ejector for use in dental work, a siphon having a downwardly directed end with a suction opening formed therein, and a removable guard for the suction opening of said siphon, said guard having resilient members integrally formed therewith for detachably gripping the sides of the end of said siphon and forming a snap-fastener therewith.

2,005,626
AIRCRAFT LANDING WHEEL
Alger G. Maranville, Akron, Ohio, assignor to General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application August 25, 1933, Serial No. 686,743
4 Claims. (Cl. 152—29)

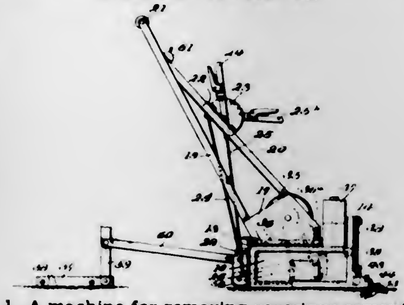


1. A streamlined aircraft wheel and pneumatic tire assembly comprising a pneumatic tire of ovate cross sectional form when inflated having side walls which diverge from the tread to the base of the tire, and a wheel body supporting said tire and provided with side covering closure walls which have external side faces shaped to merge with and form continuations of the external surfaces of the side walls of the inflated tire and which complete the streamline form of the entire wheel and tire assembly.

2,005,627
AIRPLANE LANDING WHEEL
Alger G. Maranville, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application February 6, 1930, Serial No. 426,333
Renewed January 7, 1935
3 Claims. (Cl. 152—29)

1. A wheel assembly comprising a stream-line pneumatic tire having a relatively narrow tread portion and elongated side walls diverging from the tread portion, a hub having means at the opposite ends thereof for clamping the tire, said hub having end faces forming continuations of the side walls of the tire.

2,005,628
VEHICLE WHEEL
Alger G. Maranville, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application February 11, 1933, Serial No. 592,317
9 Claims. (Cl. 301—63)

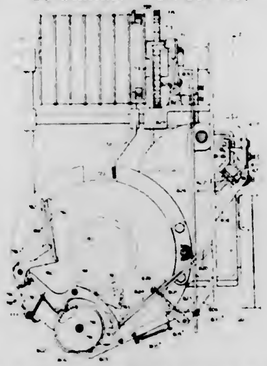


5. A combined wheel and rim structure for pneumatic tires for aircraft use comprising a hub having axially spaced radial flanges, and a wheel and rim body including a pair of annular stamped metal wheel halves, each half having a radial portion intermediate the inner and outer peripheries thereof abutting and being secured to the corresponding radial portion of the other wheel half, a radially inner portion of frusto-conical shape having a radially inwardly extending flange secured to one of said radial flanges of said hub, and a radially outer portion of frusto-conical shape diverging laterally and radially outwardly away from the corresponding portion of the other wheel half and from said radially inner frusto-conical portion and terminating in a tire engaging bead flange, said radial outer frusto-conical portion being of substantially greater axial width than the axial width of the said inner frusto-conical portion, and the axial distance between the bead flanges of said radially outward portions being materially greater than the axial distance between said flanges of said hub, each of said wheel halves also having an annular element bridging the space between said radially inner and outer frusto-conical portions and being secured to the radially inner frusto-conical portion adjacent the inner edge thereof and to said radially outer frusto-conical portion intermediate the radial portion and radial bead flange thereof.

2,005,629
STACKING OR ARRANGING SUBSTANTIALLY FLAT ARTICLES SUCH AS BISCUITS
Leonard Marsden, Newton-le-Willows, England, assignor to T. and T. Vicars Limited, Earlestown, Newton-le-Willows, England, a British company
Application December 7, 1933, Serial No. 701,399
In Great Britain December 17, 1932
3 Claims. (Cl. 198—33)

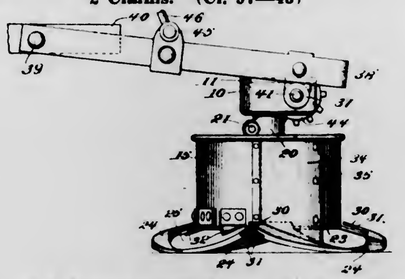
1. In an apparatus for arranging flat rectangular articles such as biscuits, the combination of a single conveyor for presenting the articles indiscriminately arranged in a flat position and delivering the articles in definite arrangement, means intermediate the ends of said conveyor for turning the indiscriminately arranged articles from a flat position to a position on edge, the major and minor axes remaining indiscriminately arranged, means for holding said articles on said conveyor in their position on edge, means for selectively changing the positions of the articles on said conveyor so that all the articles are caused to have their major axes lying in the direction of movement, and means for again causing the articles to assume a flat position on said conveyor while maintaining their major axes in the direction of movement.

2,005,630
MACHINE FOR REMOVING FLOOR COVERINGS
Walter E. Overell, Flintridge, Calif.
Application February 28, 1935, Serial No. 8,782
14 Claims. (Cl. 164—83)



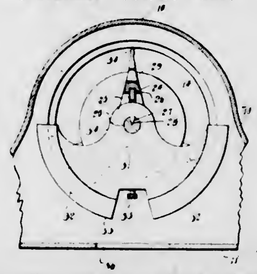
1. A machine for removing coverings cemented to floors, comprising a supporting base, a cutter head carried thereby, vertical cutters mounted on said head for severing the covering into strips, and a cutting blade mounted on said head and extending between said vertical cutters for severing the cement bond between the floor and the covering.

2,005,631
PIPE COUPLING
Jefferson D. Pace, Alexandria, La., assignor of one-half to O. O. Latimer, Alexandria, La.
Application September 5, 1934, Serial No. 742,812
1 Claim. (Cl. 285—146)



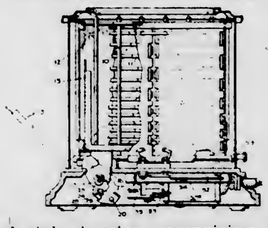
A string of drill pipe for oil wells comprising a plurality of detachably connected sections of uniform bore, each section being upset at its extremities to enlarge it only externally thereat throughout its circumference, the enlarged portion at one end of each section being internally threaded and at the other end externally threaded, so that the sections may be coupled in end to end relation, the threaded zones defining conical frustums of which the smaller bases are of greater diameter than the bores of the sections, whereby the coupled sections provide a continuous run of drill pipe having a bore of uniform diameter throughout its length.

2,005,632
KNITTING MACHINE
Frank R. Page, Brooklyn, N. Y., assignor to Scott & Williams, Incorporated, New York, N. Y., a corporation of Massachusetts
Application August 2, 1933, Serial No. 683,378
10 Claims. (Cl. 66—50)



1. In a knitting machine having a plurality of yarn guides and pattern jacks cooperating with the knitting instrumentalities, a pattern drum controlling the operation of said yarn guides, means for operating said drum, an auxiliary pattern drum controlling the operation of said pattern jacks, and means controlled by said auxiliary pattern drum controlling the operation of said pattern drum operating means.

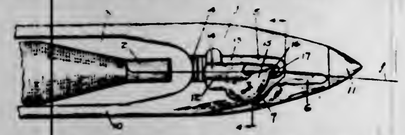
2,005,633
FARMING IMPLEMENT
George W. Peck, Muscatine, Iowa
Refiled for abandoned application Serial No. 655,815, February 8, 1933. This application March 25, 1935, Serial No. 13,011
2 Claims. (Cl. 97—43)



1. In a farming implement of the character described, a stationary head, a rotary cutter movably supported at the lower side of the head and having spaced peripheral sickle-shaped cutters, stationary cutting blades on the head and intersecting the movable cutters, a support for said head, means for imparting rotation to the rotary cutter, and a deflector located on the head and tangentially disposed with respect thereto.

2,005,634
INCLINOMETER
Edward C. Potterf, Noti, Oreg.
Application January 17, 1935, Serial No. 2,288
5 Claims. (Cl. 33—215)

1. In an inclinometer, a casing having a straight edge member, a pointer member mounted for rotation in said casing, dial plates on opposite sides of said casing and having arcuate slots therein, pointer arms mounted on said pointer member and having their extremities extended through said slots, weighted arms on said pointer member, a counterweight mounted for rotation with said pointer member, and means to adjust said counterweight relatively to the pointer member to correct the positions of said pointer arms relatively to the dials.

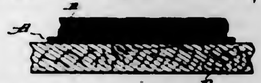


2,005,635
ELECTRIC TOASTER
Charles P. Randolph, Oak Park, Ill., assignor to Edison General Electric Appliance Company, Chicago, Ill., a corporation of New York
Application August 17, 1931, Serial No. 557,509
15 Claims. (Cl. 219—19)

1. An electric toaster comprising stationary heating elements spaced apart one from the other, a slice holder, means mounting said holder for movement to and from a toasting position between said elements, timing mechanism operating to control said heating elements to reduce their rate of heat generation after a predetermined period, an operating handle, a driving connection between said handle and said slice holder for operating said slice holder to and from a toasting position between said elements upon movement of said handle between predetermined limits, said driving connection providing for continued movement of said handle beyond one of said limits independently of said slice holder, a driving connection between said handle and said timing mechanism effective to initiate operation of said timing mechanism upon movement

of said handle independently of said slice holder, and means dependent upon the operation of said timing mechanism for preventing a subsequent movement of said handle beyond said one of said limits until after the expiration of said predetermined period but permitting the movement of said slice holder from said toasting position by said operating handle.

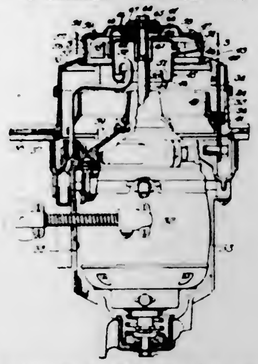
2,005,636
AUTOMATICALLY THREADING SHUTTLE
Isaac Snow, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application July 30, 1934, Serial No. 737,553
4 Claims. (Cl. 139—223)



1. An automatically threading loom shuttle comprised of a shuttle body, a threading block in said shuttle body having a longitudinally extending thread passage, said threading block being provided with a horn which extends rearwardly over said thread passage, a thread guard comprised of a member curving downwardly, outwardly and forwardly from the rearward free end of said horn, said member extending into a groove provided therefor in said shuttle body, and a thread supporting bridge adjacent to but outwardly of said horn and member, said bridge extending transversely of said groove above the bottom thereof and lower than the under surface of said horn to provide a support for the partially threaded filling which prevents the latter from unthreading about said member.

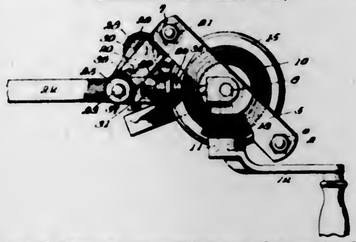
2,005,637
IMPREGNATION OF TEXTILE MATERIALS
Philip Schidrowitz, London, England, assignor, by mesne assignments, to Filastic Holding S. A., Binningen, near Basel, Switzerland, a Swiss company
No Drawing. Application May 22, 1933, Serial No. 672,357. In Great Britain April 5, 1933
1 Claim. (Cl. 91—68)

A process for the manufacture of textile materials impregnated with rubber which comprises subjecting a textile material in the form of a yarn easily permeable to liquid first to treatment with a wetting agent, then to vacuum, then to immersion in a bath of vulcanized rubber latex at ordinary atmospheric temperature and under a fluid pressure of the order of 100 pounds per square inch and subsequently maintaining the impregnated yarn in a humid atmosphere containing ammonia gas, the impregnated yarn being moved in the said atmosphere so as to prevent drainage therefrom of excess of the rubber dispersion.



2,005,638
RUG HOLDER
Elmer Clarence Schacht, Troy, N. Y., assignor to Beha-Manning Corporation, Troy, N. Y., a corporation of Massachusetts
Application December 21, 1932. Serial No. 648,251
39 Claims. (Cl. 154—49)

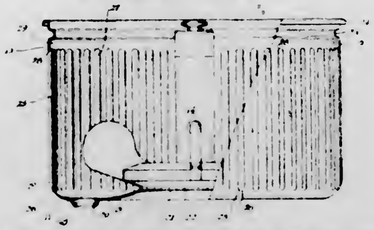
33. An article of manufacture for preventing the slippage of rugs, floor coverings or similar materials, on polished floors or other surfaces, which consists of a separate layer adapted to be placed between the rug and the floor and com-



prising a base of sheet material coated with a binder containing resin and comminuted cork particles forming a frictional contact surface.

2,005,639
OIL COMBUSTION APPARATUS
Oscar C. Schroeder and Stanley Perry, Chicago, Ill.; said Perry assignor to Automatic Burner Corporation, Chicago, Ill., a corporation of Illinois
Original application January 30, 1933, Serial No. 654,356. Divided and this application July 12, 1933, Serial No. 680,144
9 Claims. (Cl. 158—77)

1. In oil-burner apparatus, the combination of a rotatable vertical shaft, oil-distributing means rotatable with said shaft, air-delivering means adjacent the discharge from said oil-distributing means and having openings in the plane of said discharge and through which the air discharges, and shutter means for said openings, for the purpose set forth.

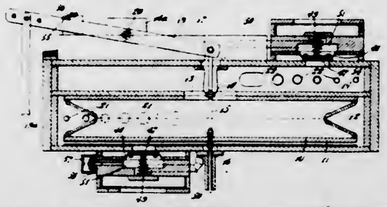


2,005,640
HAND SEAMER FOR CANS
Matthew M. Sedwick, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application September 26, 1933. Serial No. 691,054
1 Claim. (Cl. 113—23)

A hand seamer comprising a frame including spaced standards, a cross bar connecting said standards at the top, a chuck journaled on said cross bar for rotation, a can support carried by the frame and cooperating with the chuck, an

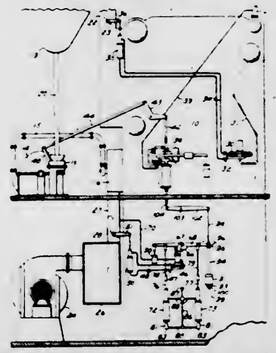
arm carried by said frame and extending substantially at right angles thereto, a bracket attached to the outer end of said arm, a rod attached to the cross bar at the axis of rotation of the chuck, means for adjustably connecting the rod to the bracket whereby the arm may be set at different angular positions relative to the cross bar, a hand-operated lever pivotally mounted for oscillation on the outer end of said arm, seaming rolls carried by said lever and disposed so that by the swinging of the lever said seaming rolls may be brought into operation, a stop member for limiting the swinging movement of the lever, said seaming rolls when operating upon the container being movable across the line passing through the pivotal point of the lever and the axis of the chuck.

2,005,641
SHEET METAL RECEPTACLE
Jacques Stanitz and George D. Boyer, Warren, Ohio, assignors to The Youngstown Pressed Steel Company, Warren, Ohio, a corporation of Ohio
Application July 24, 1933, Serial No. 681,832
10 Claims. (Cl. 220—72)



1. In a sheet metal receptacle having integral bottom and side walls with a curved corner wall therebetween, a series of spaced continuous grooves in said side walls forming continuous ribs therein, said grooves beginning at and extending upwards in said side walls from an intermediate portion of said curved corner wall, and the upper ends of said grooves merging into said side walls at points spaced below the top of said side walls.

2,005,642
COMBINED CLOSING AND OUTLET CAP FOR COLLAPSIBLE TUBES
Harry A. Thornton, Elkhart, Ind.
Application June 4, 1934, Serial No. 728,983
19 Claims. (Cl. 221—60)

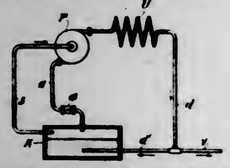


1. A combined closing and outlet cap for collapsible tubes of that type including a neck having a discharge slot for the contents of the tube, a hollow resilient body open at its inner end and having its outer end in the form of a thin disc provided with a diametrically disposed normally closed slot automatically opening on the application of pressure against the inner face of the disc to provide an outlet for the contents of the tube, and automatically closing on the relieving of pressure on the inner face of the disc, said body including a part for encompassing and permanent connection to the neck to the tube and a part extended outwardly from the said other part and merging into the disc, said parts providing the walls of the cap, the said outer part in connection with the disc providing a chamber for the reception of material expelled from the tube on the collapsing of the latter, that part of said body connected with the neck having means to provide for the automatic closing of said outlet on the relieving of pressure against the inner face of said disc.

2,005,643
SWELL LOUVER ACTION FOR ORGANS
Henry Willis and Aubrey Thompson-Allen, London, England
Application February 2, 1934, Serial No. 709,527
In Great Britain September 8, 1933
17 Claims. (Cl. 84—347)

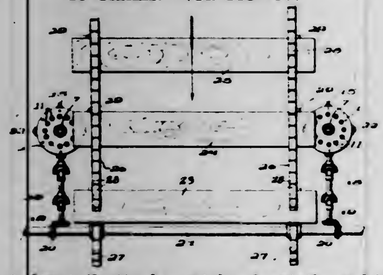
1. An action for effecting movement of swell louvers in organs, comprising a wind chest, a wind motor, a series of ducts admitting wind from the wind chest to the wind motor, valves respectively controlling the passage of wind through each duct, and individually controlled means for opening and closing the said valves in a successive order.

2,005,644
FUEL BURNING APPARATUS
Albert G. Blodgett, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application August 29, 1934, Serial No. 741,969
17 Claims. (Cl. 236—26)



1. Fuel burning apparatus comprising a furnace, a pulverizer to deliver pulverized fuel thereto, a feeding device to supply coarse fuel to the pulverizer, means to control the feeding device in accordance with the demand for heat, a regulatable device to control the flow of air to the furnace, and a regulator to control the regulatable device, the regulator being arranged to respond rapidly to changes in air supply and slowly to changes in the demand for heat.

2,005,645
PROCESS OF OXIDIZING ALIPHATIC ALCOHOLS TO ALDEHYDES
Harlan A. Bond, Metuchen, and Lee B. Smith, Woodbridge, N. J., assignors, by mesne assignments, to E. I. du Pont de Nemours and Company, a corporation of Delaware
No Drawing. Application April 15, 1930, Serial No. 444,602
11 Claims. (Cl. 260—138)



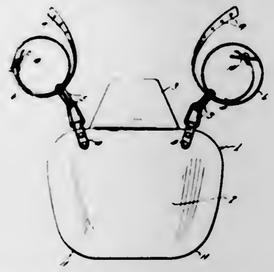
1. A process for producing an aliphatic aldehyde comprising reacting a mixture of a lower aliphatic alcohol and a molecular oxygen containing gas in the presence of porous, compacted, reduced silver as a catalyst produced by forming a compact body of silver oxide without an inert diluent or carrier and reducing the mass to metallic silver.

2,005,646
BOILER PLANT
Norbert Brunsel, Vitkovice-Zelezarny, Czechoslovakia
Application September 17, 1932, Serial No. 633,661
In Germany September 18, 1931
4 Claims. (Cl. 122—488)

1. The process of removing water and impurities from steam in a boiler plant including a boiler and superheater in series and connections for returning steam from the superheater to the boiler, comprising raising the pressure of the steam by a centrifugal action prior to its passage into the superheater, and utilizing said centrifugal action for separating water and impurities from said steam.

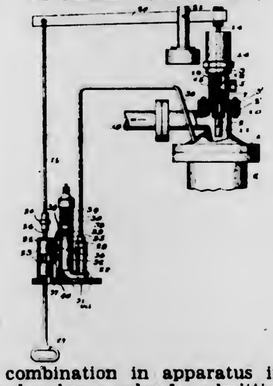
2,005,647
DOVETAIL ATTACHMENT FOR DOVETAIL MACHINES
Richard H. Creech, Pulaski, Va.
Application June 17, 1933, Serial No. 676,376
15 Claims. (Cl. 144—87)

1. A dovetail attachment for dovetail machines including material feeding means, cutter-heads carrying a plurality of cutters adapted to form both male and female sections of a dovetail joint, means mounting the cutter-heads for adjustment of the cutters to different positions relative to the feeding means for cutting male and female sections.



15. A dovetail attachment for a dovetail machine having material feeding means, cutter-heads carrying a plurality of cutters arranged for cutting either male or female sections of a dovetail joint, and means mounting the cutterheads for bodily swinging adjustment thereof relative to the feeding means between an approximately vertical position, where the female sections are cut, and an approximately horizontal position, where the male sections are cut.

2,005,648
PROCESS OF AND APPARATUS FOR THE HEAT TREATMENT OF SUBSTANCES IN ROTARY-TUBE FURNACES
Carl Paul Debuch and Ernst Markworth, Frankfort-on-the-Main, Germany, assignors to American Lurgi Corporation, New York, N. Y., a corporation of New York
Application March 9, 1934, Serial No. 714,875
In Germany March 27, 1933
16 Claims. (Cl. 263—33)



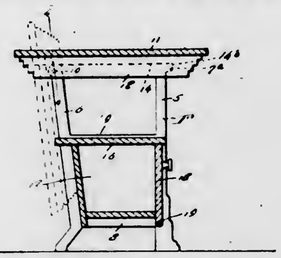
1. A rotary furnace having a heat exchange device located in the gas chamber thereof, an inlet pipe communicating with one end of the heat exchange device and an outlet pipe communicating with the other end, the inlet pipe and the outlet pipe extending through the furnace casing, and means for conducting a fluid heat carried through the inlet pipe, the heat exchange device and the outlet pipe.

2,005,649
BUCK MASK
Thomas Jefferson Dragoo, Jr., Spofford, Tex.
Application April 26, 1933, Serial No. 667,969
1 Claim. (Cl. 119—104)

In a device of the class described for the forehead of a horned animal, a transversely curved and forwardly tapered head plate of a width less than the distance between the outer sides of the horns at the bases thereof for disposition with its concave surface contacting the forehead, the side margins of the plate extending down toward the eyes and the frontal margin extending somewhat below and forwardly of the eyes when the device is installed, a stop flap extending from the rear of the plate narrower than the distance between the horns at their bases and disposable between the horns to prevent the device tilting over backward, and flexible connections disposed on opposite sides of said flap extending rearwardly from said plate for attachment to the horns.

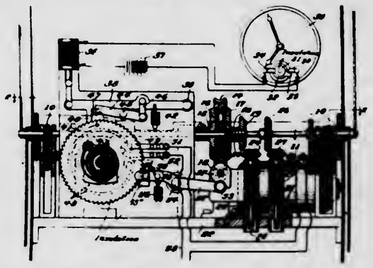
2,005,650
APPARATUS FOR AUTOMATICALLY CONTROLLING DISCHARGE OF FLUIDS UNDER PRESSURE INTO A PRESSURE CHAMBER
Ernest Du Bois, Itterbeek, Chateau De Pierrefonds, Belgium, assignor to International Carbonic Engineering Company, Kennett Square, Pa., a corporation of Delaware
Application September 14, 1931, Serial No. 562,811
In Belgium April 27, 1931
24 Claims. (Cl. 62—121)

1. In combination in apparatus including a pressure chamber, a valve for admitting fluid under pressure into said chamber, a spring normally forcing said valve to closed position; mechanism for maintaining said valve in open position against the force of said spring, and means solely controlled by fluid pressure in the pressure chamber for actuating said mechanism to release the valve for closing at a predetermined pressure in said chamber.



2,005,651
METHOD OF MAKING LOCK NUTS
I. C. Emery, Baltimore, Md., assignor to The Lock Nut Corporation of America, Chicago, Ill., a corporation of Delaware
Application November 21, 1932, Serial No. 643,759
17 Claims. (Cl. 10—96)

1. In the process of making metal lock nuts of the type having superposed wings joined by a neck, the steps of forming two holes in a flat blank, one in the center of each of the subsequently formed wings, forming a transverse groove in one face of the blank between said holes, heating the metal at the bottom of the groove, bending the two wings away from the groove and toward each other into spaced relation, squaring up the bent blank and flattening the metal on the outside of the neck thus formed, and cooling the heated part of the metal, thereby hardening the same.

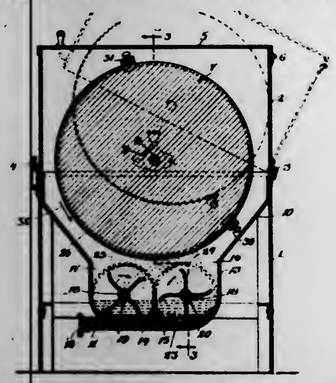


2,005,652
TABLE SEAT
Eugene Fischoff, South Bend, Ind.
Application June 22, 1934, Serial No. 731,956
1 Claim. (Cl. 155—43)

A table chair of the class described comprising a pair of side frames having upper rails, a panel, cleats on the panel having grooves to receive the rails so that the cleats may slide thereon, and pins extending through the rails and into grooves formed in the side walls of the first men-

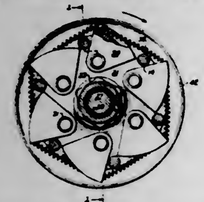
tioned grooves of the cleats, said cleats having sockets therein at one end of the first mentioned grooves, and lugs on one end of the rails to engage in the sockets as and for the purpose specified.

2,005,653
TIME CONTROLLED MECHANISM
John L. Franklin, Atlanta, Ga.
Application May 9, 1933, Serial No. 670,200
7 Claims. (Cl. 58—26)



5. Mechanism for the purpose indicated comprising a large clock movement embodying minute and hour hands and operative connections between the two to effect relative angular or turning movement in definite relation to each other, a shaft operatively connected with said movement, a driving motor operatively connected with said shaft, a ratchet wheel embodying a circuit closer controlling the circuit of said motor, means for effecting angular or turning movement of the ratchet wheel in one direction, clock controlled means releasing said wheel in a step by step movement to effect circuit closing position, and motor actuated means for effecting movement of the ratchet wheel in the opposite direction to effect circuit opening position of its circuit closer.

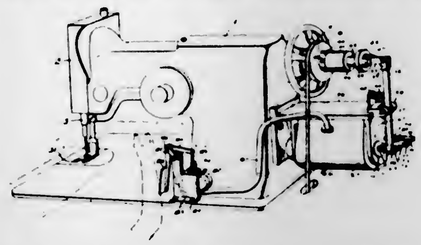
2,005,654
LITHOGRAPHIC PLATE GRAINING DEVICE
Rudolf Fritsche, New York, N. Y.
Application January 9, 1934, Serial No. 705,945
2 Claims. (Cl. 51—9)



2. In a graining machine for graining lithographic plates, a drum against which a plate is adapted to be fitted flatwise, a ring secured to said drum at each end, said rings projecting beyond the drum so as to present end flanges, a clamping bar extending longitudinally across the drum, said bar at the ends having hooks adapted

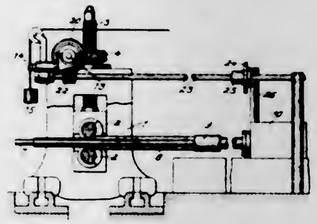
to be hooked over said flanges, means for clamping said hooks against said flanges, and a plu-

rality of plate clamping means carried by said bar.



2,005,655
DRIVING MECHANISM
Clinton H. Havill, South Orange, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application February 25, 1933, Serial No. 658,618
9 Claims. (Cl. 64—96)

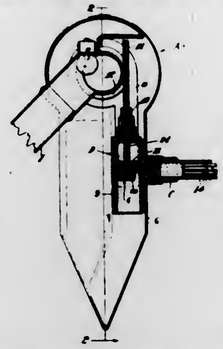
1. In a device of the class described, a rotatable part to be driven, a driving member, an oscillatory part drivably connecting said driving member and part to be driven, and supplementary connecting means deflectable by said oscillatory part into a position of greater length wherein it becomes more effective to supplement said oscillatory part as a driving connection between said driving member and part to be driven, and means for mounting said oscillatory part, said mounting means comprising a pin having an axis at a fixed radial distance from the axis of the driving member.



2,005,656
FEED REVERSING MECHANISM FOR SEWING MACHINES
Stephen Lasztocay, Bergenfield, N. J., assignor to Freydberg Brothers, Inc., New York, N. Y., a corporation of New York
Application December 19, 1931, Serial No. 582,147
10 Claims. (Cl. 112—210)

1. Apparatus for instantly reversing the feed mechanism of sewing machines while the machines are operating comprising a member operatively associated with said mechanism, a lever to move said member, means normally urging said lever in one direction of movement and adapted to hold said lever and member in a predetermined position establishing operation of said feed mechanism in a predetermined direction, electrically controlled means for moving said lever and member to establish operation of said mechanism in a

reverse direction, and a manually operated switch for operating said electrically controlled means.

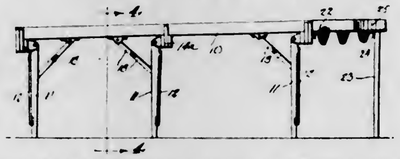


2,005,657
PILGER ROLLING MILL
Richard Ludwig, Dusseldorf-Unterrath, Germany
Application January 25, 1930, Serial No. 423,449
In Germany February 7, 1929
20 Claims. (Cl. 80—14)

3. A Pilger rolling mill which comprises in combination a tapered mandrel arranged to support a tubular bloom co-axially thereon, rolls carried by the mill, means for feeding said mandrel and bloom between at least one pair of said rolls, a rotatable screw threaded spindle having a thread of relatively large pitch, a nut arranged in engagement therewith and adapted to be moved by the feeding means so as to rotate the said spindle, and means operated by said spindle to move the rolls relatively to one another during the rolling operation.

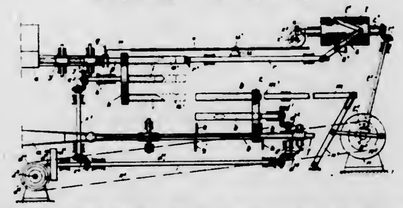
2,005,658
STOP AND TURN SIGNAL
Fusajiro Mamiya, Los Angeles, Calif.
Application July 5, 1933, Serial No. 679,058
4 Claims. (Cl. 116—39)

1. In a traffic signal, a movable signal member, a cylinder having ports therein, a piston in said cylinder arranged to cover and uncover certain of said ports, means of operative connection between said piston and said signal member including a piston rod having an atmospheric air intake passage, said piston having a passage therein communicating with said intake passage and opening on the upper and lower sides of the piston, said piston passage having a portion thereof horizontally disposed and provided with opposed valve seats, valve means in said piston passage controlling the entrance of atmospheric air into the cylinder, and means operative through said ports for creating a differential in fluid pressures in said cylinder, said valve means comprising two ball valves located in said horizontal portion of said passage and cooperating with said seats, which latter are on opposite sides



of the point of communication of the piston passage with the rod passage.

2,005,659
FLOOR MAT
Edward C. Matteson, Miami, Fla., assignor of one-fourth to Wm. F. A. Buehner and one-fourth to A. M. Woore, both of Miami, Fla.
Application July 26, 1932, Serial No. 624,858
6 Claims. (Cl. 40—140)



1. A floor mat comprising, a body portion having openings therethrough, and blocks fitted interchangeably in the openings to have a portion exposed as a part of the surface of the body portion, said mat being made of resilient material and said blocks and the body portion within said openings having interfitting rib and groove formations to hold the blocks against casual displacement in either direction.

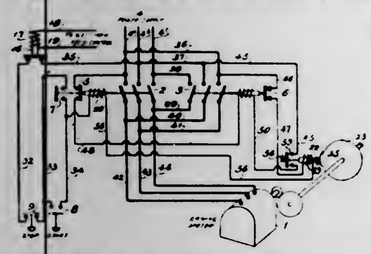
2,005,660
HAND POOL GAME
John N. Maxwell, Pittsburgh, Pa.
Application September 22, 1932, Serial No. 634,429
1 Claim. (Cl. 273—123)

In a hand pool game device, an inclined game board having a runway at each longitudinal side and a cross groove at its lower end, a series of supporting legs for the board hinged thereto with pairs of legs at each end of the board, the higher end of the game board being rabbeted transversely, a horizontally disposed ball receiving pocket section having a straight edge seated in the board rabbet with the upper surface of the board and rabbet sections lying in the same plane, means for detachably connecting the board and pocket section and a floor engaging leg carried by the outer end of the pocket section and bodily movable therewith.

2,005,661
PROCESS AND APPARATUS FOR THE MANUFACTURE OF CIGARETTES WITH A SHORT MOUTHPIECE OF WADDING, CREPE PAPER OR THE LIKE
Carl Wilhelm Müller, Dresden-Weisser Hirsch, Germany
Application February 16, 1933, Serial No. 657,140
In Germany March 8, 1932
12 Claims. (Cl. 131—5)

1. An apparatus for the manufacture of cigarettes with short mouthpieces of wadding, crepe paper or the like, comprising means for feeding a continuous length of shell, a shell spoon for receiving a shell, a filling spoon for receiving a tobacco charge, and means for executing feed movements for the spoons in opposite directions so that in one position the spoons are situated opposite the shell and the tobacco charge respectively and in another position the spoons are situated opposite each other in axial alignment.

2,005,662
HAIR CURLER
René Mussy, Hempstead, N. Y.
Application November 28, 1934, Serial No. 755,194
8 Claims. (Cl. 132—41)



1. A hair curling device comprising a tube, a pivoted retaining clip carried by the tube, a wire bail adapted to swing over the convolutions of the completely wound hair, an axle pivotally connected with one end of the tube, resilient retaining means for holding the axle in adjusted position, the free ends of the arms of said bail being pivotally connected with said axle.

2,005,663
ELECTRIC DRIVE FOR LOOMS, WEAVING MACHINES, AND THE LIKE
Fernand Phily, Lyon, France
Application July 13, 1933, Serial No. 680,321
In Germany July 18, 1932
6 Claims. (Cl. 172—239)

1. In an electric rotary drive system, a source of electric power, a reversible electric motor, an electrically actuatable main line switch connect-

ed for connecting said source to said motor in such manner as to cause forward rotation of said motor, an electrically actuatable reversing switch connected for connecting said source to said motor in such manner as to cause reverse rotation of said motor, interlocking means respectively actuatable by the closing of said main switch and said reversing switch and connected respectively to the actuating circuits of said main switch and

said reversing switch in such manner that only one of said switches can close at one time, and shaft-operated electric switch means connected in the actuating circuit of said reversing switch and actuatable by rotation of the shaft of said motor in such manner that the actuating circuit of said reversing switch is open only when said shaft occupies a particular determined angular position and is closed in all other positions of said shaft.

2,005,664

MANUFACTURE OF VISCOSE ARTIFICIAL SILK

Harold Sagar, Whitworth, Emile Van Weyenbergh, Rochdale, and Richard Owen Jones, Manchester, England, assignors to Breda-Visada Limited, Littleborough, England, a British company

No Drawing. Application April 6, 1931, Serial No. 528,238. In Great Britain May 9, 1930
8 Claims. (Cl. 106—40)

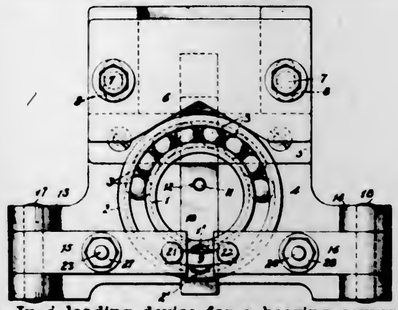
1. Unripened viscose having emulsified therein a small proportion of a difficultly hydrolyzable ester of a hydrogenated phenol and a carboxylic acid.

2,005,665

MEANS FOR OPENING CONTAINERS OF ALL KINDS

Etienne Saignier, Paris, France

Application May 9, 1934, Serial No. 724,790
In France March 1, 1934
1 Claim. (Cl. 229—51)



An opening device for paper closures of containers comprising a rectangular strip of paper, an adhesive applied to and covering one face of said strip, a tearing thread placed longitudinally across the adhesive covered face of said strip, one edge of said strip being folded over said thread and attached to a portion of the adhesive face thereof for forming a sheath for the thread and the remaining portion of the adhesive face of said strip being exposed whereby it may be applied to the container or the closure therefor.

2,005,666

LOADING DEVICE

John W. Smith, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a corporation of Connecticut

Application June 5, 1933, Serial No. 674,381
18 Claims. (Cl. 29—84)

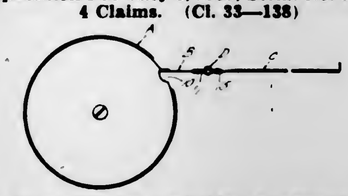
1. In a loading device for a bearing comprising a pair of hardened bearing rings each having a grooved raceway at least one of which is provided with a filler groove, means to hold said rings in spaced relation, a spreader ball to engage directly and simultaneously each of said rings at a point at one side of and adjacent to said filler groove for temporarily spreading the rings in the location of said filler groove to permit a bearing ball to be passed through said filler groove and into the raceways of said rings, and means to apply force in a direction to cause the spreader ball to enter partially between said rings to spread them for the purpose described.

2,005,667

STABLE SOLUTION OF MORPHINE

Adolf Steinbrenck, Frankfort-on-the-Main, Germany, assignor to Merz & Co., Frankfort-on-the-Main, Germany

No Drawing. Application March 7, 1932, Serial No. 597,411. In Germany March 28, 1931
2 Claims. (Cl. 167—67)



1. A stable solution of morphine hydrochloride for injection purposes, comprising an aqueous solution of about 5 grams of sodium sulphite in which 1 gram morphine hydrochloride is dissolved together with about 72 cu. cms. N/10 hydrochloric acid and phenyl-dimethyl pyrazolone giving the composition a pH value of about 7.

2,005,668

COILABLE MEASURING RULE

Frederick A. Volz, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a corporation of Connecticut

Application February 8, 1933, Serial No. 655,685
4 Claims. (Cl. 33—138)

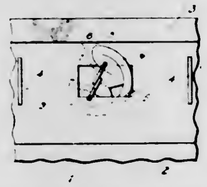
1. In combination, a holder, a measuring tape adapted to be coiled therein and having a knuckle on one end thereof, a resilient strip within said holder for coiling said tape and having a pair of spaced apart knuckles on its free end, the knuckle on said tape being adapted to be received by the space between said knuckles on said strip, a pin passing through said knuckles, and resilient means for maintaining said pin within said knuckles.

2,005,669

METHOD OF MAKING UPHOLSTERY PANELS AND APPLYING FASTENERS THERETO

Rollo F. Walters, Detroit, Mich., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application November 6, 1930, Serial No. 493,810
4 Claims. (Cl. 45—138)



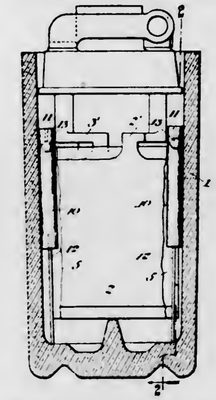
1. The method of making a trim panel and applying thereto a fastener having a U-shaped base provided with a cutting edge, a piercing end on said base adjacent to the cutting edge and a shank extending from said base which comprises pressing the piercing end into the panel structure and rotating the fastener so that the cutting edge forms a slit in the panel to permit entrance of the base into the panel structure, said cutting edge, upon completion of rotation of the fastener, forming a slit in the panel structure which is large enough with relation to the shank of the fastener that the fastener may shift longitudinally relative to the panel structure.

2,005,670

UPHOLSTERY COVERING STRUCTURE

Walter I. Jones, Arlington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application May 9, 1933, Serial No. 670,136
3 Claims. (Cl. 45—138)



1. An upholstery and like covering structure including a cardboard and like backing, a relatively rigid fastener-holding means presented at one face of the backing and having a portion with a hole therethrough spaced from said backing, said backing being imperforate beneath the hole through the fastener-holding means, a snap fastener member having a base of larger area than the aperture in said fastener-holding means and bearing at one side against the backing and at the other side against the apertured portion of the fastener-holding means and said base having means constructed and arranged to permit passage of said base through said aperture only by rotary movement of said fastener.

2,005,671

SPECIFIC GRAVITY INDICATOR

Frederick E. E. Booss, Lancaster, N. Y., assignor to Gould Storage Battery Corporation, Depew, N. Y., a corporation of Delaware

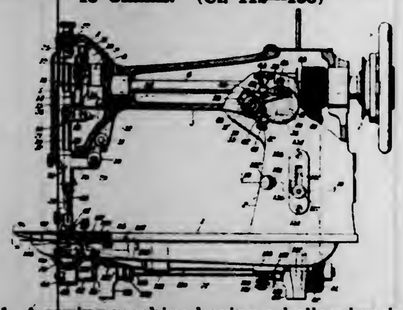
Application June 11, 1931, Serial No. 543,723
3 Claims. (Cl. 265—45)

1. A specific gravity indicator for storage batteries, comprising a transparent tube adapted to be immersed in the battery electrolyte in permanent position and extending vertically between the plates and jar of the battery, said tube being open at its top and bottom for permitting circulation of the electrolyte, a cross bar spanning the open top of the tube, and an elongated strip extending into the lower end of the tube and designed to support the tube upon the bottom of the battery, and a ball of predetermined density freely movable within the tube and having its movement limited by said cross bar and strip.

2,005,672

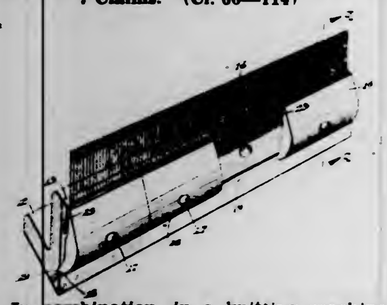
SELF-TAPPING SCREW

Raymond O. Chaffee, Belmont, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts



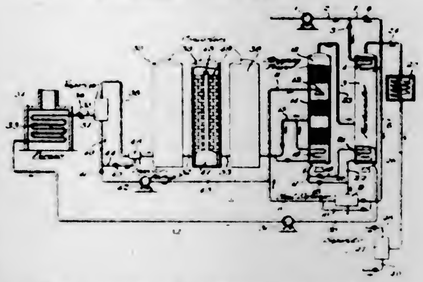
Application July 8, 1933, Serial No. 679,544
1 Claim. (Cl. 85—46)

A self-tapping screw for securing a plurality of sheet metal members together, said screw having an enlarged head, a threaded shank portion and an unthreaded pilot end, the shank being formed with double ratchet type threads extending from the head to the pilot end, the leading face of each thread being substantially at a forty-five degree angle to the shank throughout its length and the rear face thereof being substantially perpendicular to the axis of the shank, the root diameter of the thread being substantially equal to the diameter of the shank and the threads being hardened and full formed and of tapering depth diminishing in depth toward and merging with the pilot end, the double threads of the shank portion providing opposed cutting edges to facilitate balanced entering in an aperture and progressive and concentric tapping into



the sheet metal members, the perpendicular faces of the thread acting to hold the metal members securely against the head of the screw.

2,005,673
SEWING MACHINE
George M. Eames, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 3, 1933, Serial No. 691,938
18 Claims. (Cl. 112—158)



1. A sewing machine having a hollow bracket-arm terminating at its free end in a head, a vibratory needle-bar gate mounted in said bracket-arm head, a yoked pitman disposed externally at the rear side of said bracket-arm and extending toward said head, operative connections between said pitman and needlebar gate including a pivotal support for the end of the pitman adjacent to said head, a cam disposed externally of the rear wall of said bracket-arm in operative engagement with a yoke at the other end of said pitman to impart lateral vibratory movements thereto about said pivotal support, a rotary shaft disposed crosswise of said bracket-arm and carrying said cam, means for rotating said shaft, and means for translating the lateral vibratory movements of the pitman into endwise needle-bar vibrating movements including, a pitman-guide disposed externally of the rear wall of the bracket-arm, and a manually operable adjusting member at the front side of said bracket-arm operatively connected to said pitman guide.

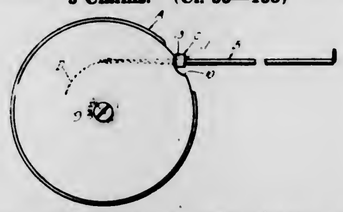
2,005,674
MOUNTING MEANS FOR NEEDLES AND THE LIKE
Gustav Gastrich, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application July 31, 1934, Serial No. 737,741
7 Claims. (Cl. 66—114)

3. In combination, in a knitting machine, a bank of needle-like elements, means for supporting the same including a backing portion extending over lengths of the stems thereof, and means including a yieldable pad providing a cushion for the needle-like elements and containing a substance protecting said elements against moisture between said backing portion and said stem lengths from which working portions of the elements project.

2,005,675
PROCESS FOR CRACKING HYDROCARBON OILS
Frank W. Hall and Harris A. Smith, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application April 27, 1931, Serial No. 533,042
3 Claims. (Cl. 196—61)

1. The process of treating hydrocarbon oil which comprises passing a clean relatively heavy oil through a heating zone wherein it is raised to a vaporizing temperature, separating the resulting heated oil into vapors and a liquid residue, passing said vapors through a converter zone in contact with highly preheated solid refractory material wherein said vapors are raised to a cracking temperature controlled independently of said vaporizing temperature and are subjected to conversion by the contained heat of said preheated refractory material, removing resulting cracked products and introducing them into a separating zone wherein vapors separate from liquid residue, removing vapors from the separating zone and passing them directly into a fractionating zone independent of said heating zone, wherein desired constituents separate as vapors from undesirable heavy products as reflux condensate, removing the fractionated vapors and condensing them to form a desired product, removing reflux condensate so formed and passing it through said heating zone as said clean oil first mentioned and introducing fresh relatively heavy charging stock into said separating zone in contact with the introduced cracked products to cause at least partial vaporization of said charging stock, and removing liquid residue from said separating zone.

2,005,676
ADHESIVE TAPE AND GAUZE DRESSING PACKAGE
Bert H. Hanover, Chicago, Ill., assignor to The Kendall Company, Chicago, Ill., a corporation of Massachusetts
Application October 31, 1933, Serial No. 696,058
6 Claims. (Cl. 206—63.2)

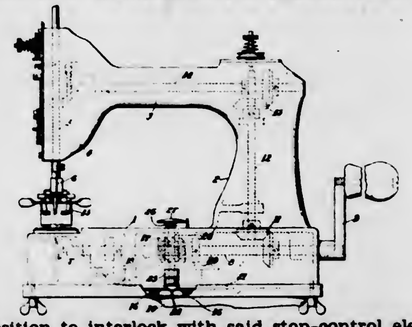


1. A package of adhesive-coated articles comprising a carrier member, said articles being pressed upon said member and removably adhering thereto, each said article having a removable protective coating over an unattached

portion thereof, whereby the same may be grasped and the article pulled off of said carrier member,

and means for enclosing said carrier member and the articles mounted thereon.

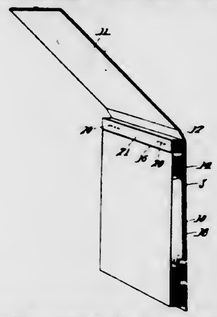
2,005,677
COILABLE MEASURING RULE
Earl V. Higbee, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a corporation of Connecticut
Application February 8, 1933, Serial No. 655,695
3 Claims. (Cl. 33—138)



1. In combination, a casing having an entrance slot and a tongue adjacent said slot, a measuring tape adapted to be coiled within said casing and to pass through said slot, said tape being so formed as to normally spring outwardly toward said tongue, winding means within the casing for coiling said tape, and an element secured to said tape and having a portion spaced from said tape, whereby a socket is provided which is adapted to be automatically moved by said tape to a position in which it receives said tongue to prevent movement of the tape into the casing.

2,005,678
ESTERIFICATION OF CELLULOSE
Georg Jayme, Hawkesbury, Ontario, Canada, assignor to Canadian International Paper Company, Hawkesbury, Ontario, Canada
No Drawing. Application September 4, 1931, Serial No. 561,307. In Canada June 30, 1931
2 Claims. (Cl. 260—101)

1. A process of acetylating wood pulp, which comprises subjecting 100 parts of the pulp to treatment with 250 to 500 parts by weight of acetic acid containing 5 to 20 parts by weight of sulphuric acid for a period of 1 to 20 days at a temperature up to 60° C., washing the pulp with acetic acid to free the fibres from dissolved impurities and treating the pulp with acetylating reagents to form substantially pure cellulose acetate.

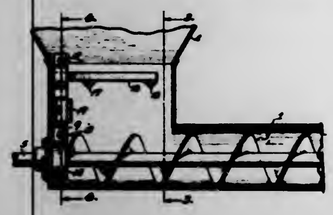


2,005,679
STOP-MOTION DEVICE FOR SEWING MACHINES
Michael McCann, Ozone Park, Long Island, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 18, 1934, Serial No. 748,920
4 Claims. (Cl. 112—219)

1. In a sewing machine, a frame, stitch-forming mechanism including a reciprocatory needle, a work-clamp, a main-shaft connected to drive the stitch-forming mechanism, a feed-cam connected at all times to be driven by said main-shaft and making one revolution for a plurality of stitch-forming cycles, said feed-cam having a stop-control element, a cooperating element mounted on the machine frame and movable to a

position to interlock with said stop-control element, manually operated means for disengaging said elements to unlock the machine, and automatic means for relatively moving said elements out of register immediately upon their manual disengagement and while said feed-cam remains stationary.

2,005,680
RENEWABLE PAD AND SUPPORT THEREFOR
Ephraim Edgar Miles, South Lancaster, Mass.; Walter Emery Miles and Martha V. Miles executors of said Miles, deceased
Application February 27, 1933, Serial No. 658,797
2 Claims. (Cl. 281—19)



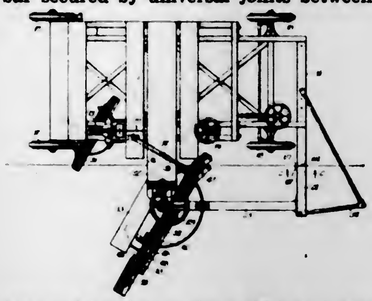
1. A refillable notebook comprising a permanent cover and a renewable filler pad, said pad having a relatively firm back to which the leaves of the pad are secured, and said back having a portion of sheet material secured to the rear face thereof and initially provided with a gummed outer surface by which said pad is attachable to an inside surface of said cover.

2,005,681
COAL STOKER AGITATOR
Victor C. Norquist, Kansas City, Mo., assignor to Butler Manufacturing Company, Kansas City, Mo., a corporation of Missouri
Application January 19, 1934, Serial No. 707,270
1 Claim. (Cl. 259—39)

In a coal stoker, a coal duct having a hopper thereabove, a feed screw in the duct, an eccen-

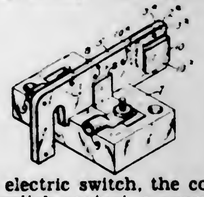
tric on the feed screw, an arm mounted on and extending upwardly from the eccentric, means for supporting an intermediate portion of said

arm against lateral movement, a second arm mounted on said first arm and extending outwardly therefrom, and an arm mounted transversely of and supported by said second arm.



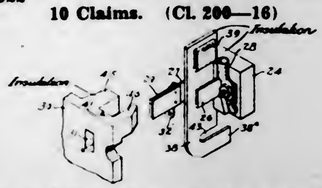
2,005,682
SEPARABLE ELECTRICAL CONTACT DEVICE
Essex J. Pool, Chicago, Ill., assignor to Cinch Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Application December 13, 1932, Serial No. 646,991
4 Claims. (Cl. 173—332)

1. In a separable electrical connector, in combination, a part having a plurality of male contact members substantially circularly arranged thereon, said part having a snap fastener member secured thereon within the circle of male contact members; and a second part comprising a pair of insulating discs apertured for passage of said male contact members therethrough, a plurality of female contact members secured between said discs in alignment with said apertures to receive said male contact members, said second part having on its forward side a snap fastener member located to engage said first-named snap fastener member and having on its opposite side a lug member, and having fastening means securing in assembled relation said snap fastener, said insulating plates with the contacts secured therebetween and said lug, said snap fastening means connecting said parts between the points of support of said male contact members and the points of contact of the latter with said female contact members.



2,005,683
ROAD GRADING MACHINE
Kenneth W. Porter, Effingham, Ill., assignor to Morris-Bennett Corporation, Effingham, Ill., a corporation of Illinois
Application February 23, 1932, Serial No. 594,573
16 Claims. (Cl. 37—155)

1. A grader having a carriage adapted to travel on a hard road surface, a side projection therefrom, a mold board adjustably supported on said side projection, and an adjustable couple bar secured by universal joints between the



carriage and a point on the mold board near the end thereof closest to the hard road surface.

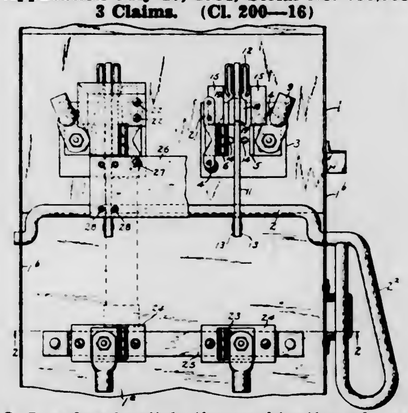
2,005,684
ELECTRIC SWITCH
Joseph Sachs, West Hartford, Conn.
Application June 10, 1932, Serial No. 616,406
5 Claims. (Cl. 200—144)

1. In an electric switch, the combination of a stationary switch contact, a composite insulating plate movable in a fixed path adjacent the stationary contact, and a movable switch contact carried by the said plate at one side thereof and adapted to cooperate with the stationary contact, the said composite plate comprising a sheet of insulating material resistant to breakage or deformation and a sheet of different insulating material serving as a facing for the first said sheet at the surface thereof adjacent the said contacts and having arc resisting characteristics superior to those of the first said material.

2,005,685
ELECTRIC CIRCUIT CONTROLLING APPLIANCE
Joseph Sachs, West Hartford, Conn.
Original application September 6, 1931, Serial No. 563,149, now Patent No. 1,947,276. Divided and this application March 7, 1933, Serial No. 659,922
10 Claims. (Cl. 200—16)

1. In an appliance of the type disclosed, the combination of a rear insulating supporting means, two stationary opposed switch contacts on the supporting means and perpendicular thereto, a pair of coacting fuse receiving contacts one of which is fixedly mounted on the forward portion of one of the said switch contacts, an insulating retainer at the front of the switch contacts and directly behind the position of a fuse in the said fuse contacts, the said retainer being removable with the last said fuse contact remaining in place, and a switching member rectilinearly movable behind the retainer and between the stationary switch contacts and comprising a movable contact with oppositely disposed faces adapted to engage or disengage the said stationary contacts, the said switching member being normally guided at the front by the retainer and being freely removable from the appliance after removal of the retainer.

2,005,686
ELECTRIC CIRCUIT CONTROLLING APPLIANCE
Joseph Sachs, West Hartford, Conn.
Application July 17, 1934, Serial No. 735,564
10 Claims. (Cl. 200—114)

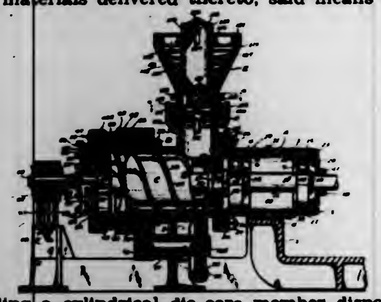


6. In a fused switch, the combination of a rear insulating supporting means, a pair of stationary opposed switch contacts on the supporting means and perpendicular thereto, an element on one switch contact extending transversely toward the other, a switching member rectilinearly movable between the stationary switch contacts and comprising a movable contact with oppositely disposed faces adapted to engage or disengage the said stationary contacts, a pair of coacting fuse receiving contacts one of which is fixedly mounted on the forward portion of one of the said switch contacts, and an insulating retainer located at the front of the switching member and behind the said transversely extending element, the said retainer normally serving as a front guide for the switching member and being removable longitudinally so as to permit removal of the switching member in a forward direction without disturbing the mounting of the said fuse contact on the said switch contact.

2,005,687
CURRENT RESPONSIVE ELEMENT AND METHOD OF MANUFACTURE THEREFOR
Joseph Sachs, West Hartford, Conn.
Application June 20, 1933, Serial No. 676 618
4 Claims. (Cl. 200—113)

3. A method of manufacture for longitudinally slotted unitary current-carrying bi-metallic strips adapted to serve as the current-responsive elements of automatic circuit breakers, which method comprises varying the total lengths of the slots in accordance with the required time lag characteristics while maintaining the external dimension of the strips unchanged.

2,005,688
ELECTRIC CIRCUIT CONTROLLING APPLIANCE
Joseph Sachs, West Hartford, Conn.
Application July 17, 1934, Serial No. 735,565
3 Claims. (Cl. 200—16)

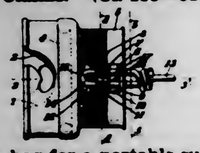


3. In a fused switch, the combination of a rear insulating supporting means, two stationary opposed switch contacts on the supporting means and perpendicular thereto, a switching member rectilinearly movable between the stationary switch contacts and comprising a movable contact with oppositely disposed faces adapted to engage or disengage the said stationary contacts, a pair of coacting fuse receiving contacts one of which is fixedly mounted on the forward portion of one of the said switch contacts, two removable insulating blocks separate from the supporting means and located to provide opposite insulating walls closely adjacent the paths of movement of the faces of the movable contact, and an insulating retainer located at the front of the switching member and at the front of the said insulating blocks and directly behind the axis of a fuse in the said fuse contacts, the said retainer normally serving to hold the said insulating blocks in place and also normally serving as a front guide for the switching member and the said retainer being removable so as to permit removal of the switching member or of the said blocks without disturbing the mounting of the said fuse contact on the said switch contact.

2,005,689
FORMING MACHINE FOR COMPRESSED FEEDS
Claude C. Hall, Portland, Oreg.
Application January 16, 1934, Serial No. 706,818
10 Claims. (Cl. 107—14)

10. In apparatus of the class described, in combination with any machine producing compressed feeds, a volume control and pre-compression mechanism comprising a hopper in communication with and rotatably disposed in cooperative relationship to said machine, means for rotating said hopper, means disposed within said hopper for controlling the rate of flow of materials entering therein said means including a plurality

of screw worms extending inwardly from the inner wall of the hopper to form spiral passageways therein, means positioned with respect to the last mentioned means for pre-compressing the materials delivered thereto, said means in-



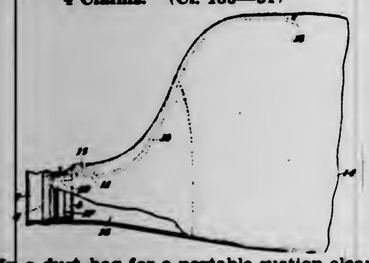
cluding a cylindrical die-core member disposed centrally of the hopper adjacent said screw worms, said die-core member having a series of die slots formed at one end thereof, and means for raising or lowering said die-core member.

2,005,690

DUST BAG SUPPORT FASTENING FOR PORTABLE SUCTION CLEANERS

Hjalmar Hertz, New York, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application December 30, 1933, Serial No. 704,711
3 Claims. (Cl. 183—51)



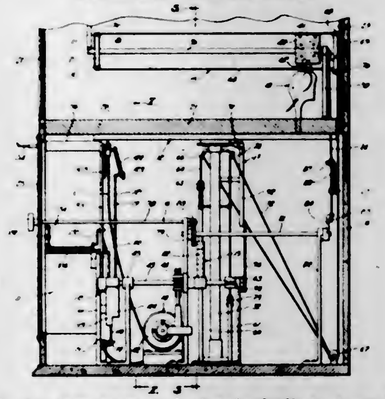
1. In a dust-bag for a portable suction cleaner, a tubular sheet-metal dust-bag connector having a plurality of spaced circumferentially extending slots disposed side-by-side and affording a plurality of bands, one of said slots being curved to provide an intermediate portion which is depressed below the inner cylindrical wall of said connector to form a seat, and a dust-bag supporting rod having an end-portion gripped by said bands and received in said seat.

2,005,691

DUST-BAG SUPPORT FOR PORTABLE SUCTION CLEANERS

Hjalmar Hertz, New York, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application December 30, 1933, Serial No. 704,712
4 Claims. (Cl. 183—51)



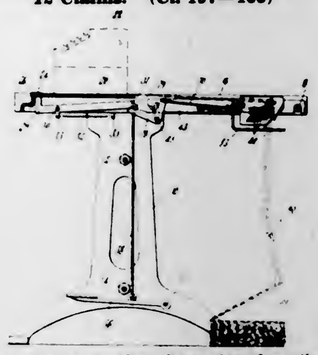
1. In a dust-bag for a portable suction cleaner, a tubular dust-bag connector adapted for attachment to the dust-outlet of the cleaner, a dust-bag attached to said connector, and a one-piece dust-bag-supporting rod attached at one end only to said connector and having a relatively short helical portion adjacent said connector and a relatively long straightaway portion beyond said helical portion.

2,005,692

AMUSEMENT DEVICE

Mordicha Margolith, Hawthorne, Calif., assignor to National Merchandising Company Ltd., Santa Monica, Calif., a corporation

Application August 25, 1933, Serial No. 686,744
18 Claims. (Cl. 273—138)



1. An amusement device including, a support for carrying articles, a part supported for movement across said support substantially in parallelism therewith to push articles therefrom, and coin controlled power means for moving said part.

2,005,693

ALIGNING DEVICE FOR MANIFOLDING TYPEWRITERS

Arthur G. Pierce, Quincy, Mass., assignor to Atlantic Register Company, Waltham, Mass., a corporation of Massachusetts

Application October 11, 1934, Serial No. 747,875
12 Claims. (Cl. 197—133)

1. In a device of the character described, the combination of a support, a plurality of aligning leaves pivotally mounted in said support in spaced relation permitting a paper strip to travel between each two adjacent leaves from a source

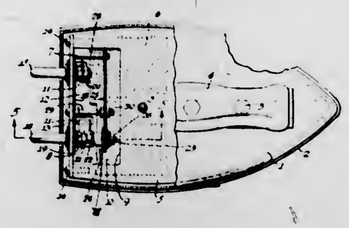
of supply, a pair of stops for limiting the pivotal movement of said leaves in both directions, normally operative means for holding said leaves in a retracted position against one of said stops and means for turning said leaves forwardly against the other of said stops when said holding means is released.

2,005,694

HEDGE SHEARS

Peter S. Vosbikian and Thomas S. Vosbikian, Philadelphia, Pa., assignors to Keystone Tool Manufacturing Company, a corporation of Pennsylvania

Application February 6, 1934, Serial No. 709,907
3 Claims. (Cl. 30—11)



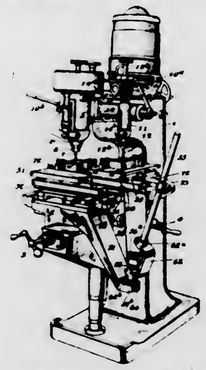
2. Hedge shears, comprising handle receiving shanks, having cooperating bearing portions, a pair of cutting blades pivotally connected with each other at their rear ends, a fastening device passing through said bearing portions and the rear ends of said blades in advance of their pivotal connection, and each of said bearing portions having a forward extension having a pin and slot connection with a juxtaposed blade intermediate the free ends of such blade and said fastening device.

2,005,695

SAFETY DEVICE FOR SADIRONS

Abe Caruthers, Jr., Nashville, Tenn.

Application July 19, 1933, Serial No. 681,131
1 Claim. (Cl. 219—25)



In a sad iron including a casing, and a pair of contact members extending through said casing and a heating element having one terminal connected to one of said contact members, and having the other terminal bent to form an upstanding flexible support, a thermostatic switch comprising a contact head connected to said flexible support terminal of said heating element, a laterally flexible contact carrier carrying said contact head into and out of engagement with the other of said contact members, said flexible contact carrier being formed of strips of metal having different coefficients of expansion, means for fixedly supporting said contact carrier at its opposite end, and a regulator controlling the temperature at which said switch operates, said regulator also supporting said contact carrier and being positioned on said carrier nearer to its free end than to its secured end.

2,005,696

MACHINE TOOL

George Gorton, 3d, Peter M. Henkes, and George Horner, Racine, Wis., assignors to George Gorton Machine Company, Racine, Wis., a corporation of Wisconsin

Application January 13, 1934, Serial No. 706,540
23 Claims. (Cl. 90—13.2)

1. In combination, a cutter head; a tracer stylus head arranged in relatively normally fixed relation to said cutter head; a relatively longitudinally movable cutter carried by the cutter head; a relatively longitudinally movable stylus carried by the stylus head; a hand operated feed means for simultaneously moving the cutter and stylus longitudinally toward and from operative positions and for holding the same in operative and withdrawn positions; and means under the control of the operator for holding the work and pattern in fixed relative relationship and for simultaneously moving the same laterally, while maintaining said relationship, into operative relations with the cutter and stylus, respectively, said last mentioned means including a sensitive work and pattern carrier universally laterally movable, and an actuating and holding handle having power multiplying operative connection with said carrier, said handle being arranged with respect to said feed means for operation by one hand of the operator while his other hand is applied to said feed means.

15. A three dimensional duplicating apparatus wherein a cutter and a tracer stylus are maintained in normal laterally spaced relation, and wherein the work and the pattern are arranged opposite the cutter and the tracer, respectively; including manually controlled means for causing relative depth cutting and tracing and return movements between the cutter and tracer and the work and pattern to bring the cutter and the work and the tracer and the pattern to and hold the same in operative depth cutting and depth tracing association; and manually-actuated means for causing universal lateral cutting and tracing movements between the cutter and the tracer and the work and pattern, embodying a member provided with a supporting mounting by which said member is rendered freely and universally movable laterally and is held against substantial relative vertical movements, and a

member-propelling and controlling handle provided with operative power-multiplying and controlling connection with said member.

2,005,697
MANUFACTURE OF IRON BLUES
Samuel Felten Greve, Swarthmore, Pa., assignor to Henry Bower Chemical Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application August 31, 1933, Serial No. 687,727
23 Claims. (Cl. 23—77)

1. An improvement in making iron blues by a process involving reaction together in solution of a ferrous salt and an alkali ferrocyanide, with a resultant ferrous alkali ferrocyanide precipitate, and oxidation of this precipitate; which improvement comprises subjecting the precipitate, before the oxidation thereof, to the influence in the solution of the ions of a metal of the group consisting of magnesium and calcium, which does not itself react with the other ingredients aforementioned, nor with the desired product and afterwards eliminating a component containing these ions from the product.

13. An improvement in making iron blues by a process involving reaction together in solution of ferrous sulphate and an alkali ferrocyanide, with a resultant ferrous alkali ferrocyanide precipitate and oxidation of such precipitate; which improvement comprises bringing the ferrous salt and the alkali ferrocyanide together in an amount of water such as to be thickened into a slurry at a comparatively early stage of the reaction, and gradually adding more water as the reaction proceeds.

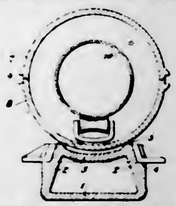
21. An improvement in making iron blues by a process involving reaction together in solution of a ferrous salt and an alkali ferrocyanide, with a resultant ferrous alkali ferrocyanide precipitate, and oxidation of this precipitate; which improvement comprises subjecting the precipitate, before the oxidation thereof, to the influence of magnesium sulphate in the solution, and afterward eliminating the magnesium sulphate from the product.

2,005,698
MANUFACTURE OF IRON BLUES
Samuel Felten Greve, Swarthmore, Pa., assignor to Henry Bower Chemical Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Continuation of application Serial No. 629,582, August 19, 1932. This application October 3, 1933, Serial No. 692,036
9 Claims. (Cl. 23—77)

1. An improvement in the making of iron blues, which improvement comprises bringing into reaction together, in water, a dissolved ferrous salt and a suspended sparingly soluble double ferrocyanide of an alkali and a metal which will replace the iron of said ferrous salt.

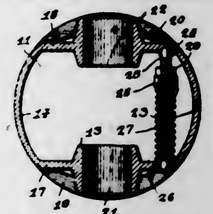
2,005,699
CONDUIT AND LIKE CONSTRUCTION
Christian Gottwald, Cleveland Heights, Ohio., assignor to The Ric-wiL Company, Cleveland, Ohio, a corporation of Ohio
Application March 1, 1934, Serial No. 713,453
7 Claims. (Cl. 137—75)

1. A conduit comprising sections each consisting of upper and lower portions, the edges of the upper and lower portions being formed with undercut recesses extending therealong, the ends of the lower section being provided with undercut recesses opening to the interior of the



section and the end of the upper portion being provided with undercut recesses opening to the exterior of the section.

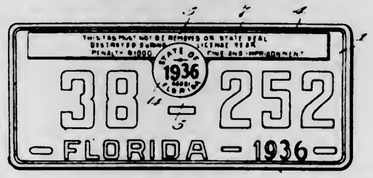
2,005,700
PROCESS OF EXTRACTING SEX HORMONES AND A COMPOUND OF A SEX HORMONE WITH AN ALKALOID
Fritz Johannessohn, Mannheim-Feudenheim, and Erich Rabald, Mannheim, Germany, assignors to Rare Chemicals, Inc., Nepera Park, N. Y., a corporation of New York
No Drawing. Application October 14, 1933, Serial No. 693,670. In Germany October 22, 1932
18 Claims. (Cl. 260—131)



15. A follicular sex hormone combination consisting of the hormone combined with an alkaloid base.

2,005,701
CONDUIT CONSTRUCTION
Morton L. Spackman, Cleveland, Ohio, assignor to The Ric-wiL Company, Cleveland, Ohio, a corporation of Ohio
Application August 12, 1931, Serial No. 556,630
14 Claims. (Cl. 137—75)

1. A base drain comprising a series of tiles each being an integral piece having two pair of ribs, one pair along its top, and the other pair along its sides.



2,005,702
PISTON
Gerritt Wagner, Orange City, Iowa
Application August 12, 1933, Serial No. 684,905
1 Claim. (Cl. 309—12)

A piston having a wall including separable resilient portions, one of said portions being perforated and the other having a recess in its inner

face, a screw having an end mounted for rotation in said recess and a grooved end mounted for reciprocation and rotation in said perforation, a nut threaded upon the screw and a spring surrounding the screw and having an end bearing against the nut and an end bearing against the perforated face of a resilient portion.

2,005,703
AUTOMOBILE LICENSE PLATE HOLDER
Karl Endlich, Miami, Fla., assignor of one-half to William F. A. Buehner, Miami, Fla.
Application March 28, 1935, Serial No. 13,519
7 Claims. (Cl. 40—125)

1. In combination with a license plate having openings and a mounting bracket there for having openings, mounting bolts fitted through the openings of the bracket and plate, clamp nuts fitted on said mounting bolts and provided with guideway portions, a locking bar provided with flange portions received in the guideway portions of the clamp nuts to retain the same against removal from the mounting bolts, and seal means engaging the locking bar and the license plate to prevent unauthorized removal of the locking bar.

2,005,704
CONDUIT
Christian Gottwald, Cleveland Heights, and Harvey R. Hawgood, Cleveland, Ohio, assignors to The Ric-wiL Company, Cleveland, Ohio, a corporation of Ohio
Application March 25, 1933, Serial No. 662,771
2 Claims. (Cl. 137—75)

2. A ceramic article comprising a tubular body of substantially uniform thickness throughout the major portion of its extent, two excrescences each including a pair of axially extending ribs arranged diametrically opposite each other, each pair of ribs defining a recess, and two axially extending excrescences intermediate said ribs, the ribs and second mentioned excrescences being substantially equal in cross-section, the second mentioned excrescences being arranged diametrically opposite each other substantially midway between the recesses.

2,005,705
PREPARATION OF CARBON COMPOUNDS CONTAINING FLUORINE
Herbert W. Daudt and Mortimer A. Youker, Wilmington, Del., assignors, by mesne assignments, to Kinetic Chemicals, Incorporated, Wilmington, Del., a corporation of Delaware
Application September 20, 1930, Serial No. 483,289
27 Claims. (Cl. 260—162)

1. The process of preparing di-fluoro-dichloro methane which comprises passing carbon-tetra-chloride and hydrogen fluoride simultaneously into a penta-valent antimony halide.

2,005,706
ORGANIC FLUORINE COMPOUND
Herbert Wilkens Daudt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals Inc., Wilmington, Del., a corporation of Delaware
Application August 10, 1932, Serial No. 628,154
27 Claims. (Cl. 260—166)

1. In a process of preparing organic fluorine compounds, the step which comprises reacting together in vapor phase hydrogen fluoride and a compound containing an acyclic carbon atom having attached thereto a halogen other than fluorine, in the presence of a catalyst comprising essentially carbon.

13. Penta-fluoro-chloro-ethane.

2,005,707
PRODUCTION OF ORGANIC FLUORINE COMPOUNDS
Herbert Wilkins Daudt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals Inc., Wilmington, Del., a corporation of Delaware
Application August 31, 1932, Serial No. 631,162
26 Claims. (Cl. 260—166)

1. In a process of preparing organic fluorine compounds, the step which comprises reacting together hydrogen fluoride and a compound containing an acyclic carbon atom having attached thereto a halogen other than fluorine in the presence of a metal halide on activated carbon.

2,005,708
PRODUCTION OF HALOGENATED ETHANE DERIVATIVES CONTAINING FLUORINE
Herbert Wilkens Daudt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
Application August 24, 1933, Serial No. 686,618
29 Claims. (Cl. 260—162)

1. In a process of preparing fluorinated ethane derivatives, the step which comprises passing hydrogen fluoride and a halogenated acyclic hydrocarbon containing two carbon atoms and halogen other than fluorine into an antimony halide, and maintaining the reaction zone at a temperature above 95° C. under superatmospheric pressure.

2,005,709
PRODUCTION OF ORGANIC FLUORINE COMPOUNDS
Herbert Wilkens Daudt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
Application October 7, 1933, Serial No. 692,696
11 Claims. (Cl. 260—162)

1. In a process of producing organic fluorine compounds involving a fluorination in the presence of a volatile antimony fluorinating catalyst and removal from the reaction zone of evolved vapors containing fluorinated compounds and volatilized catalyst as well as other substances, the step which comprises passing the evolved vapors through at least two scrubbing baths in series of a halogenated acyclic hydrocarbon, the temperature of each bath being lower than that of the preceding one.

2,005,710
PREPARATION OF FLUORINE COMPOUNDS
Herbert Wilkens Dandt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
Application March 26, 1934, Serial No. 717,514
In Canada May 20, 1931
55 Claims. (Cl. 260—162)

1. In a process of producing carbon compounds containing fluorine, the step which comprises reacting together hydrogen fluoride and a compound containing at least one acyclic carbon atom having attached thereto at least one halogen atom other than fluorine.

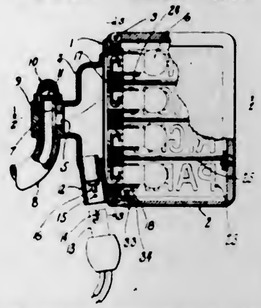
50. In a process of producing halogenated acyclic hydrocarbons containing fluorine, the step which comprises simultaneously bringing gaseous hydrogen fluoride and a halogenated acyclic hydrocarbon containing a halogen other than fluorine into contact with a heavy metal halide carried on a support and maintained at a temperature within the range of about 250° C. to about 550° C.

2,005,711
PREPARATION OF ORGANIC FLUORINE COMPOUNDS
Herbert Wilkens Dandt and Mortimer Alexander Youker, Wilmington, Del., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application June 15, 1934, Serial No. 730,842. In Canada May 20, 1931
12 Claims. (Cl. 260—162)

1. In a process of producing fluorinated derivatives of methane, containing two atoms of hydrogen, the step which comprises reacting together hydrogen fluoride and methylene chloride in the presence of a heavy metal halide.

11. In a process of producing fluorinated derivatives of methane containing two atoms of hydrogen, the step which comprises reacting methylene chloride with a pentavalent antimony fluorohalide.

2,005,712
ORGANIC FLUORINE COMPOUNDS AND PROCESS FOR THE PRODUCTION THEREOF
Lee Cone Holt, Edgemoor, and Edwin Lorenzo Mattison, Richardson Park, Wilmington, Del., assignors to Kinetic Chemicals Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application August 31, 1932, Serial No. 631,123
30 Claims. (Cl. 260—160)



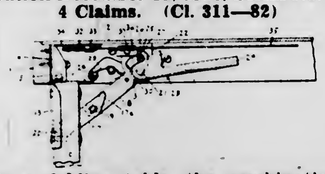
1. In a process of producing organic fluorine compounds, the step which comprises reacting a fluorinating agent with a compound containing at least one acyclic carbon atom, having attached thereto an aromatic radical and at least one halogen atom other than fluorine, in the presence of a phosphorus halide.

20. In a process of producing organic fluorine compounds, the step which comprises reacting together in liquid phase hydrogen fluoride and a halogenated hydrocarbon containing at least one acyclic carbon atom having attached thereto at least one halogen atom other than fluorine and an aromatic radical, in the presence of a small amount of an antimony fluorinating catalyst.

2,005,713
PRODUCTION OF FLUORINATED ACYCLIC HYDROCARBONS
Lee Cone Holt, Edgemoor, Del., and Edwin Lorenzo Mattison, Pennsgrove, N. J., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application February 2, 1933, Serial No. 654,970
11 Claims. (Cl. 260—162)

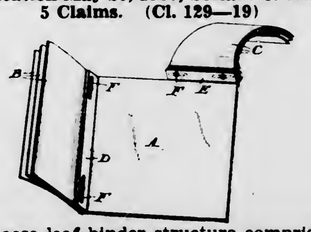
1. In a process of producing fluorinated acyclic hydrocarbons, the step which comprises passing hydrogen fluoride into a mixture of liquid halogenated acyclic hydrocarbon not containing fluorine and about 2.0% to about 25.0%, based on the weight of the halogenated acyclic hydrocarbon, of a pentavalent antimony halide.

2,005,714
SIGNALING DEVICE
Bornett L. Bobroff, Racine, Wis.
Application August 8, 1929, Serial No. 384,319
3 Claims. (Cl. 177—329)



1. A signal device comprising a casing having metal parts, an insulating panel carried within said casing and provided with openings, sockets carried within said openings, and insulated from the metal parts of said casing, a grounding strip carried by said panel and contacting with the metal parts of said casing and center contact fingers secured to said grounding strip and having free ends located adjacent the openings in said panel, each of said sockets being electrically distinct from every other socket.

2,005,715
FOLDING CHAIR
John Kovats, Fairfield, Conn., assignor to The Leg-O-Matic Company, Bridgeport, Conn., a corporation of Connecticut
Application April 21, 1931, Serial No. 531,663
2 Claims. (Cl. 155—148)



1. A foldable chair comprising a seat member; a back member pivoted to said seat member for movement into either a folded position or an extended position; front legs pivoted to said seat member; a pair of toggle links pivoted respectively to the seat member and front legs and pivoted together intermediate these pivots; rear legs pivoted to said seat member; secondary pivots on said back member and on said rear legs; and actuator links connected to and extending from said back member secondary pivot, one to the pair of toggle links and the other to the secondary pivot on the rear legs to move the front legs and rear legs into folded and extended positions automatically when the back member is moved into folded or extended positions respectively.

2,005,716
FOLDING ARTICLE OF FURNITURE
John Kovats, Fairfield, Conn., assignor to The Leg-O-Matic Company, Bridgeport, Conn., a corporation of Connecticut
Application December 19, 1933, Serial No. 703,050
4 Claims. (Cl. 311—82)

3. In a folding table, the combination of a table top; a plurality of legs; means for hinging the legs on the table top for movement to and from extended and folded positions; toggle links connecting each leg to the table top; means yieldingly directly and independently acting on each pair of toggle links for causing the latter to automatically complete the movement of the leg into either folded or extended positions as the legs approach either the one or the other of said positions respectively; and means acting on said toggle links for interconnecting the legs for simultaneous movement of all by one.

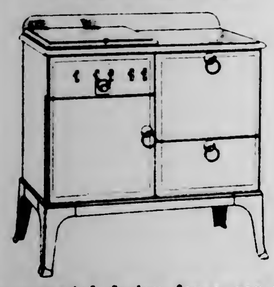
2,005,717
BOOK STRUCTURE AND BINDER FOR LEAVES
Melvin H. Coulston, Washington, D. C.
Application May 20, 1930, Serial No. 454,132
5 Claims. (Cl. 129—19)

1. A loose leaf binder structure comprising, in combination a pair of longitudinally hinged cover members, a flange hinged along a longitudinal side margin of one of the cover members, remote from the cover hinge, and another flange hinged along a transverse margin of the second cover member.

DESIGNS

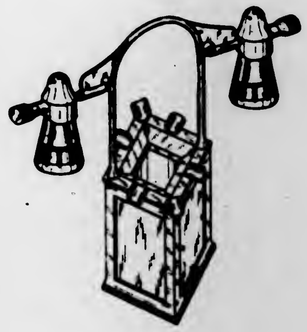
JUNE 18, 1935

95,944
DESIGN FOR A HAND MIRROR
Harry L. Bernstein, Elmira, N. Y.
Application April 2, 1935, Serial No. 56,184
Term of patent 3½ years



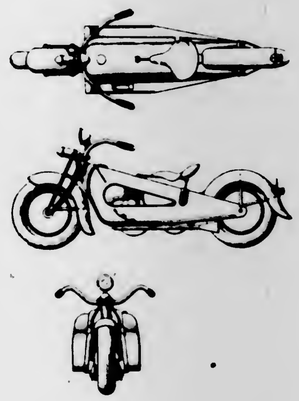
The ornamental design for a hand mirror, as shown.

95,945
DESIGN FOR A TEXTILE FABRIC
Fremont Otto Beesmeck, New York, N. Y.
Application April 10, 1935, Serial No. 56,299
Term of patent 3½ years



The ornamental design for a textile fabric, substantially as shown.

95,946
DESIGN FOR A GAS RANGE
William T. Bradbury, Kankakee, Ill., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application March 29, 1934, Serial No. 51,237
Term of patent 7 years



The ornamental design for a gas range substantially as shown.

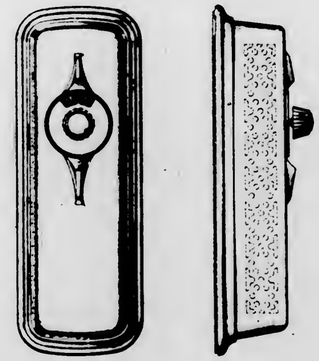
95,947
DESIGN FOR A COMBINATION ASH TRAY AND SALTCELLAR STAND
Monty J. Buchanan, Seattle, Wash.
Application March 25, 1935, Serial No. 56,044
Term of patent 7 years

The ornamental design for a combination ash tray and saltcellar stand, as shown.

95,948
DESIGN FOR A MOTOR-CYCLE
Everett M. De Long, Cleveland, Ohio
Application April 15, 1935, Serial No. 56,381
Term of patent 14 years

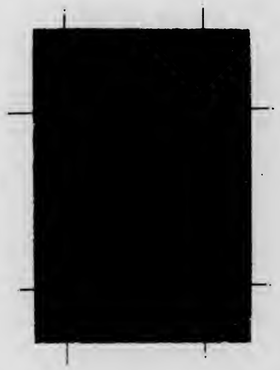
The ornamental design for a motor-cycle, as shown.

95,949
DESIGN FOR AN ICE-CUBE SPOON
Milton S. Dunkelberger, Dayton, Ohio
Application March 16, 1935, Serial No. 55,903
Term of patent 7 years



The ornamental design for an ice-cube spoon, as shown.

95,950
DESIGN FOR A CYCLE SADDLE
Roland W. Faulhaber, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application April 4, 1935, Serial No. 56,213
Term of patent 14 years

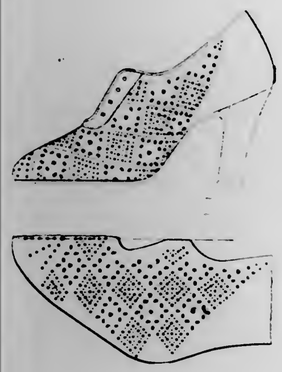


The ornamental design for a cycle saddle substantially as shown.

95,951
DESIGN FOR AN AIR-CONDITIONING CONTROL DEVICE OR SIMILAR ARTICLE
Lucien L. Fries, Baltimore, Md., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application April 10, 1935, Serial No. 56,287
Term of patent 14 years

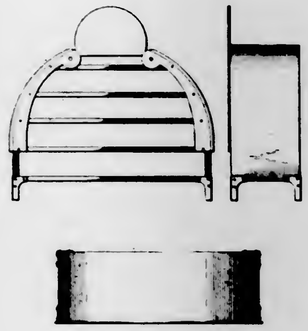
The ornamental design for an air-conditioning control device or similar article, as shown and described.

95,952
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
John F. Gaul, Jr., Clifton, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application January 2, 1935, Serial No. 54,663
Term of patent 14 years



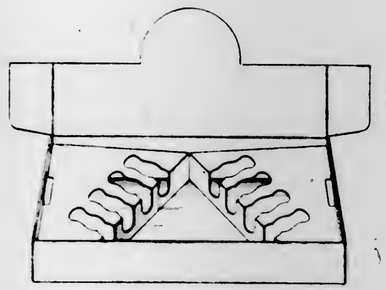
The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

95,953
DESIGN FOR A SHOE
Leo Goodkind, Woodmere, N. Y.
Application May 9, 1935, Serial No. 56,751
Term of patent 3½ years



The ornamental design for a shoe as shown.

95,954
DESIGN FOR A SHOE OR ARTICLE OF ANALOGOUS NATURE
Albert E. Gordon, Boston, Mass.
Application April 26, 1935, Serial No. 56,562
Term of patent 3½ years



The ornamental design for a shoe or article of analogous nature, substantially as shown and described.

95,955
DESIGN FOR A DISPLAY RACK
Norman E. Heil, Paterson, N. J.
Application May 16, 1934, Serial No. 51,811
Term of patent 7 years

The ornamental design for a display rack as shown and described.

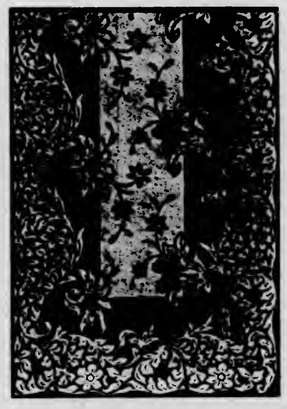
95,956
DESIGN FOR A CHRISTMAS TREE LIGHTING UNIT CARTON
Mitchel E. Holy, Chicago, Ill., assignor to Container Corporation of America, Chicago, Ill., a corporation of Delaware
Application September 28, 1934, Serial No. 53,430
Term of patent 14 years

The ornamental design for a Christmas tree lighting unit carton, substantially as shown and described.

95,957
DESIGN FOR A LACE TABLECLOTH
Howard D. Hooven, Jr., Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,321
Term of patent 3½ years

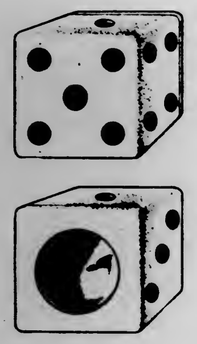
The ornamental design for a lace tablecloth substantially as shown and described.

95,958
DESIGN FOR A LACE TABLECLOTH
Howard D. Hooven, Jr., Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,322
Term of patent 3½ years



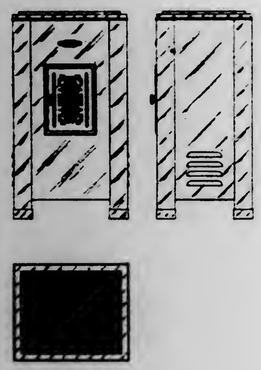
The ornamental design for a lace tablecloth substantially as shown and described.

95,959
DESIGN FOR A LACE TABLECLOTH
Howard D. Hooven, Jr., Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,323
Term of patent 3½ years



The ornamental design for a lace tablecloth substantially as shown and described.

95,960
DESIGN FOR A LACE TABLECLOTH
Howard D. Hooven, Jr., Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,324
Term of patent 3½ years

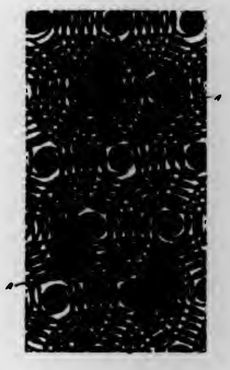


The ornamental design for a lace table cloth substantially as shown and described.

95,961
DESIGN FOR A RADIOCABINET
Nathan George Horwitt, New York, N. Y.
Application May 26, 1934, Serial No. 51,934
Term of patent 3½ years

The ornamental design for a radio cabinet, as shown.

95,962
DESIGN FOR A HEATER CABINET OR THE LIKE
Don F. Jones, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application April 13, 1935, Serial No. 56,260
Term of patent 7 years

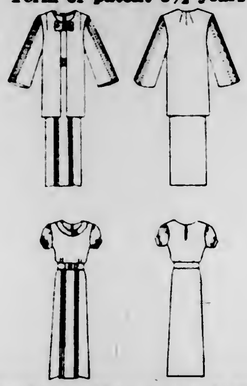


The ornamental design for a heater cabinet, or the like, as shown.

95,963
DESIGN FOR A SANDAL
William H. Joyce, Jr., Pasadena, Calif.
Application May 9, 1935, Serial No. 56,750
Term of patent 3½ years

The ornamental design for a sandal as shown.

95,964
DESIGN FOR A TEXTILE FABRIC
Max U. Juestrich, Ridgefield, N. J., assignor to The American Fabrics Company, Bridgeport, Conn., a corporation of Connecticut
Application February 2, 1935, Serial No. 55,212
Term of patent 3½ years

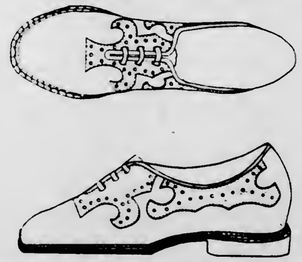


The ornamental design for textile fabric, substantially as shown and described.

95,965
DESIGN FOR A GLASS BOTTLE
Lawrence J. Kihn, Pittsburgh, Pa., assignor to J. T. & A. Hamilton Company, a corporation of Pennsylvania
Application October 16, 1934, Serial No. 53,633
Term of patent 3½ years

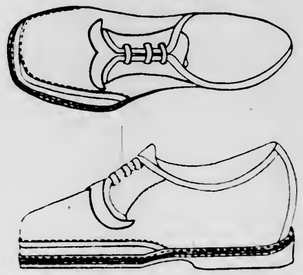
The ornamental design for a glass bottle, substantially as shown and described.

95,966
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 9, 1935, Serial No. 56,280
Term of patent 3½ years



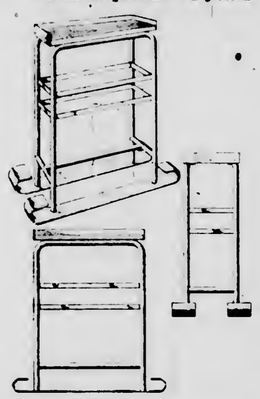
The ornamental design for an ensemble dress, substantially as shown and described.

95,967
DESIGN FOR AN ICE TRAY
Ralph E. Kruck, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application April 3, 1935, Serial No. 56,193
Term of patent 7 years



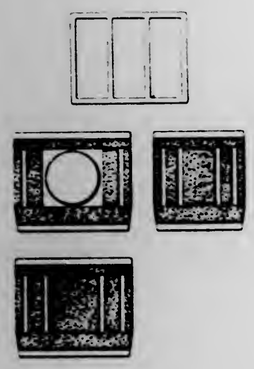
The ornamental design for an ice tray substantially as shown.

95,968
DESIGN FOR A SHOE
Josef Lanz, Salzburg, Austria
Application May 2, 1935, Serial No. 56,664
Term of patent 7 years



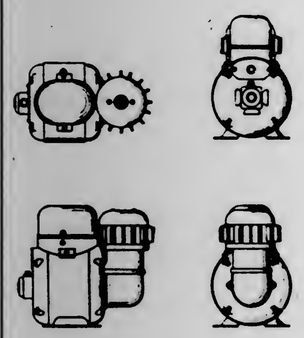
The ornamental design for a shoe, as shown.

95,969
DESIGN FOR A SHOE
Josef Lanz, Salzburg, Austria
Application May 2, 1935, Serial No. 56,665
Term of patent 7 years



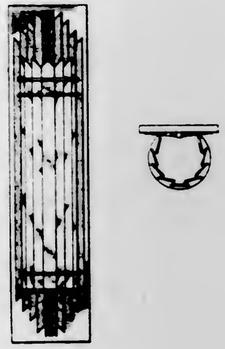
The ornamental design for a shoe, as shown.

95,970
DESIGN FOR A VENDING MACHINE STAND OR SIMILAR ARTICLE
Emma A. Laughery, Chicago, Ill.
Application April 15, 1935, Serial No. 56,398
Term of patent 14 years



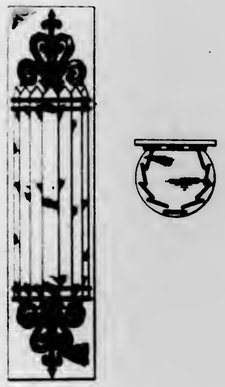
The ornamental design for a vending machine stand or similar article, as shown.

95,971
DESIGN FOR A BATTERY BOX
Raymond Le Clerc, Glendale, Calif., assignor to Western Molded Products, Inc., Los Angeles, Calif., a corporation of Ohio
Application April 17, 1935, Serial No. 56,430
Term of patent 14 years



The ornamental design for a battery box as shown.

95,972
DESIGN FOR A PUMP ASSEMBLY
Lynn G. Lindsay, Minneapolis, Minn., assignor to The Lindsay Ganley Company, Incorporated, St. Paul, Minn., a corporation
Application September 26, 1934, Serial No. 53,402
Term of patent 3½ years

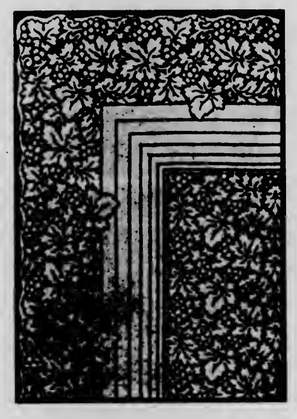


The ornamental design for a pump assembly as shown.

95,973
DESIGN FOR A SURFACE SUPPORTED LIGHTING FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application March 20, 1935, Serial No. 55,969
Term of patent 7 years

The ornamental design for a surface supported lighting fixture substantially as shown.

95,974
DESIGN FOR A SURFACE SUPPORTED LIGHTING FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application March 25, 1935, Serial No. 56,033
Term of patent 7 years

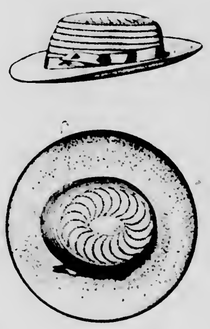


The ornamental design for a surface supported lighting fixture substantially as shown.

95,975
DESIGN FOR A LACE TABLECLOTH
Walter C. Miller, Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,319
Term of patent 3½ years

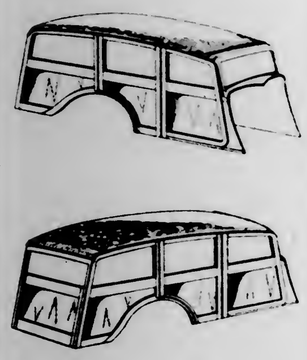
The ornamental design for a lace tablecloth substantially as shown and described.

95,976
DESIGN FOR A LACE TABLECOTH
Walter C. Miller, Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,320
Term of patent 3½ years



The ornamental design for a lace tablecloth substantially as shown and described.

95,977
DESIGN FOR A KNITTED FABRIC
Milton Moskowitz, Brooklyn, N. Y.
Application December 18, 1934, Serial No. 54,468
Term of patent 7 years



The ornamental design for a knitted fabric, as shown.

95,978
DESIGN FOR A HAT
Sam Neger, New York, N. Y.
Application May 27, 1935, Serial No. 57,029
Term of patent 3½ years

The ornamental design for a hat, substantially as shown.

95,979
DESIGN FOR AN AUTOMOBILE BODY
Ames E. Northup, Pleasant Ridge, Mich., assignor to The Murray Corporation of America, Detroit, Mich., a corporation of Delaware
Application August 1, 1934, Serial No. 52,763
Term of patent 3½ years

The ornamental design for an automobile body substantially as shown and described.

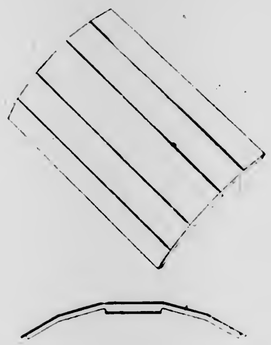
95,980
DESIGN FOR A SIGNAL AND CODE DIAL
Arnold Opler, Riverside, Ill.
Application February 6, 1935, Serial No. 55,278
Term of patent 7 years

The ornamental design for a signal and code dial, substantially as shown.

95,981
DESIGN FOR A LACE TABLECLOTH
Ferdinand P. Otto, Philadelphia, Pa., assignor to Quaker Lace Company Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,317
Term of patent 3½ years

The ornamental design for a lace table cloth. substantially as shown and described.

95,982
DESIGN FOR A LACE TABLECLOTH
Ferdinand P. Otto, Philadelphia, Pa., assignor to Quaker Lace Company, Incorporated, Philadelphia, Pa.
Application April 11, 1935, Serial No. 56,318
Term of patent 3½ years

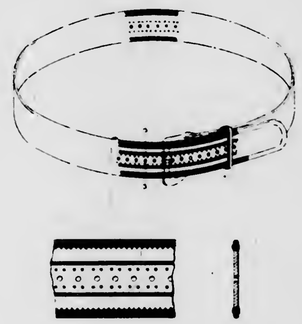


The ornamental design for a lace table cloth substantially as shown and described.

95,983
DESIGN FOR A CRUCIFIXION CROSS OR SIMILAR ARTICLE
Benjamin E. Puciloski, Cicero, Ill.
Application March 30, 1935, Serial No. 56,136
Term of patent 7 years

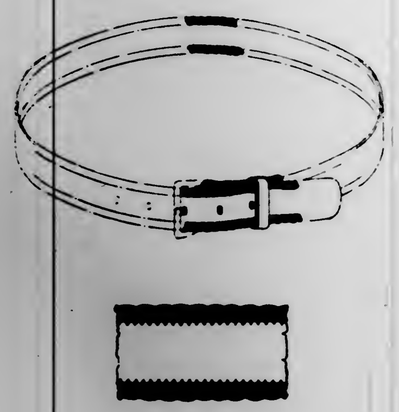
The ornamental design for a crucifixion cross or similar article, substantially as shown.

95,984
DESIGN FOR A CARPET SWEEPER SHELL
Fred W. Pullen, Grand Rapids, Mich., assignor to Bissell Carpet Sweeper Company, Grand Rapids, Mich.
Application September 29, 1934, Serial No. 53,434
Term of patent 14 years



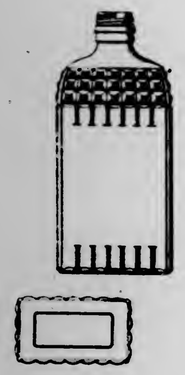
The ornamental design for a carpet sweeper shell, substantially as shown and described.

95,985
DESIGN FOR A BADGE
Alonzo R. Rowles, Washington, D. C.
Application February 12, 1935, Serial No. 55,377
Term of patent 3½ years



The ornamental design for a badge, substantially as shown.

95,986
DESIGN FOR A BELT FOR PERSONAL WEAR
Morris Sachs, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application May 27, 1935, Serial No. 57,026
Term of patent 3½ years

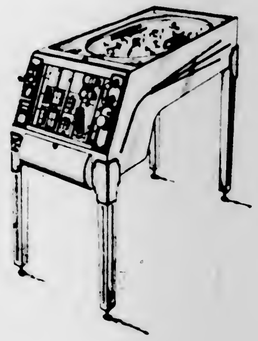


The ornamental design for a belt for personal wear, as shown and described.

95,987
DESIGN FOR A BELT FOR PERSONAL WEAR
Morris Sachs, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application May 27, 1935, Serial No. 57,028
Term of patent 3½ years

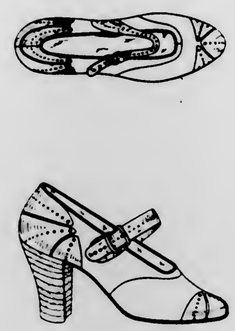
The ornamental design for a belt for personal wear, as shown and described.

95,988
DESIGN FOR A BOTTLE
George Sakier, New York, N. Y., assignor to Schenley Products Company, New York, N. Y., a corporation of New Jersey
Application February 20, 1935, Serial No. 55,523
Term of patent 14 years



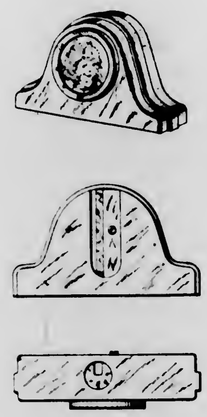
The ornamental design for a bottle as shown.

95,989
DESIGN FOR A BOTTLE
George Sakier, New York, N. Y., assignor to Schenley Products Company, New York, N. Y., a corporation of New Jersey
Application February 20, 1935, Serial No. 55,524
Term of patent 14 years



The ornamental design for a bottle, as shown.

95,990
DESIGN FOR A COMBINED GAME APPARATUS AND VENDING MACHINE
Matt Schu, Chicago, Ill.
Application March 27, 1935, Serial No. 56,074
Term of patent 7 years

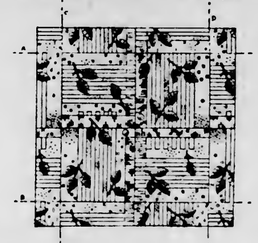


The ornamental design for a combined game apparatus and vending machine as shown.

95,991
DESIGN FOR A SHOE
Paul M. Seigel, Chicago, Ill., assignor to Valley Shoe Corporation, St. Louis, Mo., a corporation of Missouri
Application April 18, 1935, Serial No. 56,446
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

95,992
DESIGN FOR A PENCIL SHARPENER
Albert Shaffer, Brooklyn, N. Y.
Application March 8, 1935, Serial No. 55,785
Term of patent 7 years



The ornamental design for a pencil sharpener as shown.

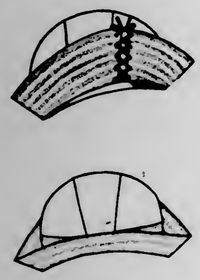
95,993
DESIGN FOR A JAR
Clifford B. Stevens, Milwaukee, Wis., assignor to Holsum Products, Inc., Milwaukee, Wis., a corporation of Wisconsin
Application November 22, 1934, Serial No. 54,125
Term of patent 7 years

The ornamental design for a jar, as shown.

95,994
DESIGN FOR A CARPET
John S. Travis, Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 6, 1935, Serial No. 56,241
Term of patent 7 years

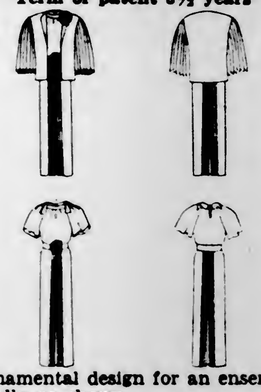
The ornamental design for a carpet substantially as shown and described.

95,995
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 11, 1935, Serial No. 56,787
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown and described.

95,996
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 11, 1935, Serial No. 56,788
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown.

95,997
DESIGN FOR A HAT
Bernard Workman, New York, N. Y.
Application May 11, 1935, Serial No. 56,791
Term of patent 3½ years

The ornamental design for a hat, substantially as shown and described.

95,998
DESIGN FOR AN ENSEMBLE DRESS
Samuel Zahn, New York, N. Y.
Application April 15, 1935, Serial No. 56,373
Term of patent 3½ years

The ornamental design for an ensemble dress, substantially as shown.

95,999
DESIGN FOR A CANDLE LIGHT OR SIMILAR ARTICLE
Joseph Zeitlin, New York, N. Y.
Application December 8, 1934, Serial No. 54,348
Term of patent 7 years

The ornamental design for a candle light or similar article, as shown.

CARNEGIE LIBRARY OF ATLANTA

Patents Nos. 2,005,718 to 2,006,331

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 455—No. 4 TUESDAY, JUNE 25, 1935 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(C. C. A. Ohio) Hopkins patent, No. 1,196,691, for means for distributing liquids, *Held* infringed. *Alliance Securities Co.* v. *De Vilbiss Mfg. Co.*, 76 F.(2d) 503.

(C. C. A. Ill.) Valjean patent, No. 1,512,869, for combustion apparatus, claims 1 to 6 and 9, *Held* not infringed. *Sears, Roebuck & Co.* v. *Valjean*, 76 F.(2d) 592.

(C. C. A. Mich.) Coffey patent, No. 1,706,211, for drop-pit mechanism, claim 30, *Held* invalid. *Whiting Corporation* v. *Manning, Maxwell & Moore*, 76 F.(2d) 457.

(C. C. A. Pa.) McCarthy patent, No. 1,748,489, for photographing apparatus, claims 5, 18, 19, 21, and 27, *Held* invalid. *McCarthy* v. *National Perforator Co.*, 76 F.(2d) 600.

(C. C. A. Mich.) Coffey reissue patent, No. 17,116, for drop-pit mechanism for unwheeling locomotives, claims 1, 2, 9, 31, 40, and 41, *Held* invalid. *Whiting Corporation* v. *Manning, Maxwell & Moore*, 76 F.(2d) 457.

Amendments to Amendments

RULE 74. When an amendatory clause is amended, it must be wholly rewritten, so that no interlineation or erasure shall appear in the clause, as finally amended, when the application is passed to issue. If the numbed or nature of the amendment shall render it otherwise difficult to consider the case or to arrange the papers for printing or copying, the Examiner or Commissioner may require the entire specification to be rewritten.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,889,694, C. G. Passanante, Folding table, decided May 6, 1935, claims 2 and 3.

Pat. 1,957,079, Adolph Roaning, Power driven mowing machine, decided May 29, 1935, claim 1.

Disclaimers

1,789,392.—*John Sneed*, Ferndale, Mich. BRAKE ADJUSTER. Patent dated January 20, 1931. Disclaimer filed June 3, 1935, by the patentee, and the assignee, *The Midland Steel Products Company*, as trustee for *Steeldraulic Brake Corporation*.

Hereby disclaim from the aforesaid patent claims Nos. 1 and 2 which are in the following words, to wit:

"1. In a brake, the combination of a shoe having an inwardly extending flange, an adjuster for changing the effective length of said shoe having a slot in which said flange fits, screw means for moving said adjuster in one direction and spring means for moving said adjuster in the opposite direction when said screw means is released.

"2. In apparatus of the class described the combination of a brake shoe having an inwardly extending flange, an adjusting member adapted to engage said flange and to extend circumferentially beyond one end of said shoe, and screw means adapted when turned in one direction to move said adjusting member to increase the effective length of said shoe and when turned in the opposite direction to allow said adjusting member to be moved to decrease the effective length of said shoe."

1,949,765.—*Jean Delattre Seguy*, Chicago, Ill. HYDROCARBON OIL CONVERSION. Patent dated March 6, 1934. Disclaimer filed June 4, 1935, by the patentee, the assignee, *Universal Oil Products Company*, consenting.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"4. A hydrocarbon oil cracking process which comprises passing the oil in a restricted stream through a heating zone and heating the same therein to cracking temperature under sufficient pressure to maintain a substantial portion thereof in the liquid phase, discharging the heated oil into a separating zone and separating the same into vapors and unvaporized oil therein, simultaneously heating hydrocarbon vapors to vapor phase cracking temperature in a second heating zone maintained at higher temperature than the first-mentioned heating zone, and injecting resultant vapor phase cracked vapors from said second zone in amount and at a temperature sufficient to distill the unvaporized oil to coke."

Condition of Applications Under Examination at Close of Business June 8, 1935

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE RICHARDSON ET AL.

No. 3,423. Decided February 4, 1935

[74 F.(2d) 942]

PATENTABILITY—CHILL-HARDENING ADHESIVE DEPILATORY COATING MATERIAL.

Claims for a chill-hardening adhesive depilatory coating material *Held* properly rejected as not inventively different from the claims of a patent owned by applicant's assignee.

APPEAL from the Patent Office. Affirmed.

Mr. Roy W. Johns for Richardson et al.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming the action of the Examiner in rejecting claims 5, 15, 16, and 18 of appellants' application for a patent on an alleged improvement in chill-hardening adhesives.

The application of the appellants discloses adhesive coating materials which are substantially fluid when hot, and which congeal upon chilling, and are particularly adaptable for use as food carcass depilatories. For such material the appellants propose to use rosin and cottonseed oil, or rosin and asphalt. These are liquefied by heat, then sprayed upon the carcass of a hog or other animal, after which it hardens and forms a coating upon the hair or excrescences of the carcass. This hard coating is then removed, carrying with it the hair and other extraneous material, after which this material is recovered by fusing and straining out the foreign matter. The appellants state that the rosin element may vary from 88 per centum to 93 per centum, with a complement of cottonseed oil. They also give another form consisting of about 25 per centum of rosin with a complement of asphalt.

The rejected claims are as follows:

5. A fusible chill-hardening adhesive depilatory coating material of substantially uniform amorphous consistency adapted for stripping epidermal excrescences from edible carcasses consisting of a relatively large proportion of resinous material with a correspondingly small proportion of unguinous material.

15. A fusible, chill-hardening adhesive depilatory coating material of substantially uniform, amorphous consistency adapted for stripping epidermal excrescences from edible carcasses consisting of a resinous material and an unguinous material.

16. A fusible, chill-hardening adhesive depilatory coating material of substantially uniform, amorphous consistency adapted for stripping epidermal excrescences from edible carcasses consisting of a resinous material in quantity of from substantially 25 per cent to 90 percent of the entire mass and the remainder of an unguinous material.

18. A fusible, chill-hardening adhesive depilatory coating material of substantially uniform, amorphous consistency adapted for stripping epidermal excrescences from edible carcasses consisting of not less than 25 per cent of rosin and an unguinous material.

The Examiner rejected these claims upon the following references: Knoepfler, 1,084,091, January 13, 1914; Walter, 1,721,610, July 23, 1929; Richardson et al., 1,748,082, February 25, 1930.

The Board of Appeals affirmed the decision of the Examiner, stating, in part:

The decision of the Examiner is affirmed in rejecting the claims as not patentably distinguishing over the matter disclosed and claimed in the patent to Walter. This action also applies to allowed claim 5 as well as the appealed claims, as held by the Examiner in his statement.

The said patent to Walter covers a method of depilating food carcasses, particularly the carcasses of hogs. The patentee describes his method as one which—

"consists in coating the carcass with a congealable liquid, chilling the coating to cause it to solidify, and then stripping the coating with the embedded hairs from the carcass."

The patentee recites that various temperature controlled substances may be used,

"but it has been found that the pitch, resin, and paraffin produce very good results when used in a mixture of about sixty-five parts resin, thirty parts pitch, and five parts paraffin."

In general, the method of application and use of this material is as shown by the appellants here. The patent contains broad claims which cover the method employed by the appellants here. Claims 1, 7, and 11 of the patent will-suffice to illustrate this, and are as follows:

1. The method of depilating a carcass which consists in coating the carcass with a congealable liquid, chilling the coating to cause it to solidify, and then stripping the coating with the embedded hairs from the carcass.

7. The method of depilating a carcass which consists in coatng the carcass with a congealable liquid including pitch, resin and paraffin, chilling the coating to cause it to solidify, and then stripping the coating with the embedded hairs from the carcass.

11. The herein described method of dressing carcasses, consisting in coating the same with melted waxy and adhesive material, causing said material to congeal, and finally removing the congealed waxy and adhesive material and with it hair and extraneous material.

It is suggested by the appellants that the Walter patent and the appellants' application have been assigned to the same assignee, and that the appealed claims here constitute subject matter which is different and divisible from the Walter patent. It is also urged by appellants that Walter is an improper reference because of the alleged fact that Walter does not claim the specific compound, and that it was and is proper for the common assignee to receive the broad claims, as in the Walter patent, and afterward to include specific claims in another patent; in other words, that the appellants here are only attempting to define specifically a certain composition which, although broadly included in the Walter patent and claims, is not specifically claimed there.

In addition, it is argued that the Walter patent does not disclose a composition such as is suggested by appellants' application and claimed by them therein; in other words, that the appellants claim a composition consisting of resinous material and an unguinous material, and that the Walter patent discloses a mixture of rosin, pitch, and paraffin; that the appellants have limited their claims to a composition containing but one resinous material and one unguinous material, and have thereby distin-

guished them from the disclosure in the Walter patent.

The Solicitor replies to this argument by calling attention to the fact that pitch and paraffin are both unguinous resinous materials, and that if they were united, an unguinous material would still exist. From this, the Solicitor argues that appellants' claims read directly upon the Walter disclosure. This argument, we believe, is sound, and is not contraverted by the fact that in claims 16 and 17 the appellants give certain proportional percentages of the resinous material in their composition.

We are in agreement with the statement of the Board of Appeals that there is—

"nothing patentable in restricting the claims of this application to two materials while leaving the claims of the patent open to include additional materials if desired."

In view of this conclusion, further allusion to the other references is unnecessary.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE LOBL

No. 3,431. Decided February 25, 1935

[75 F.(2d) 219]

1. DESIGNS—INVENTION.

It is elementary that there must be invention to justify the grant of a design patent. Whether there be such invention or not is to be judged largely by the effect of such design upon the ordinary observer and a consideration of the prior art.

2. SAME—SAME—NASAL INHALER.

Design for nasal inhaler *Held* patentable over the prior art.

APPEAL from the Patent Office. Reversed.

LENROOT, *J.*, and BLAND, *J.*, dissenting.

Mr. Lee B. Kemon for Lobl.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

The appellant sought a patent upon a design for a nasal inhaler, in the United States Patent Office. His application was denied by both the Examiner and the Board of Appeals, in view of the art, for claimed lack of invention.

The references cited by the Board are as follows: Lobl, 1,340,662, May 18, 1920; Palmer, 1,431,177, Oct. 10, 1922; Moore, 1,540,274, June 2, 1925.

Appellant's design, as shown by the drawings, is for an inhaler with two nipple-like projections rising above the body of the container. Each of these projections has a hole in the apex. The length of the body portion of the container is more than double its width. The longer sides are parallel, while the ends of the container are rounded. Surrounding the flat base of the inhaler are two concentric mouldings integral with the body. The whole is stream lined, the side lines symmetrically converging upward toward the extremities of the inhaling projections. The entire design presents a pleasing appearance, being regular, shapely, and free from angles and irregularities.

The references alleged to be anticipatory are all mechanical patents. Lobl is a container for inhalants. It is rectangular in shape, the corners being rounded. The lower portion consists of a box containing the inhalant. Fitting into this is a top portion consisting of two rectangular projections for applying to the nostrils. The sides of these projections are flat, the corners rounded, and the sides adjacent to each other are corrugated. As assembled, the container gives the appearance of a box with a lid, the upper margin of the box being parallel with the bottom of the container.

The reference Palmer, which is thought by the office to be "basic," discloses an inhaler, the base of which is oval in shape. About the base of the inhaler is a rounded flange. Arising from the base are two projections, horn-shaped, bending outward and then inward toward the apices, so that they may be hooked within the nostrils. The outward appearance of these projections is not shown by the drawings.

The patent to Moore shows an inhaler. Its base is rectangular, to which rectangle is attached a curved metal plate, to be held in the mouth to keep the inhaler in situ. Rising from the rectangular base are two rectangular projections pierced at their apices. These projections are inclined inward from the base toward the aforementioned plate.

[1] It is elementary that there must be invention to justify the grant of a design patent. Whether there be such invention or not is to be judged largely by the effect of such design upon the ordinary observer and a consideration of the prior art.

[2] We are of opinion that the design presented by appellant is pleasing and artistic, is distinctive, is not suggested by the references, but is substantially different therefrom, produces a different aesthetic effect, and is inventive. In such cases, a patent should be allowed. *In re* Hormel, 19 C. C. P. A. (Patents) 1046, 56 F. (2d) 672, 420 O. G. 293, and *In re* Muldoon, 19 C. C. P. A. (Patents) 1082, 56 F. (2d) 894, 421 O. G. 8.

The decision of the Board of Appeals is reversed.

Reversed.

LENROOT, *J.*, dissenting:

I feel compelled to dissent from the conclusion reached by the majority in this case for the reason that, in my opinion, the production of the design here involved did not inviove the exercise of the inventive faculty.

It is my opinion that a person with average intelligence, having before him the drawings of appellant's mechanical patent, or the drawings of the Moore patent, desiring to design a more pleasing and artistic form of inhaler, could, and would, within the space of an hour, produce substantially appellant's design without any exercise of the inventive faculty. The general contours of an inhaler, such as is shown in appellant's patent, must be preserved because of its utilitarian function. This leaves a very limited field for change in form to render the design more pleasing and artistic. Probably not more than three or four such designs, excluding ornamentation upon the form itself, could be made without exhausting the field. If the design here involved is patentable, then perhaps two or three additional designs are likewise patentable because sufficiently distinctive from the design here in issue; and, until the expiration of these patents, no one could make inhalers like those shown in the references in an attractive and artistic form without paying tribute to those who, in the exercise of merely ordinary skill, had produced designs upon which they had secured patents.

In the case of *In re* Walter, 17 C. C. P. A. (Patents) 982, 39 F.(2d) 724, 396 O. G. 706, we said:

It should be remembered that the purpose of the law authorizing the grant of patents for designs was to give encouragement to the decorative arts, but it was not the purpose to grant a monopoly over a particular design, even if it presents a new and distinctive appearance, if its creation did not involve invention. The decorative arts would be retarded instead of advanced if one without the exercise of the inventive faculty, upon seeing a new article come into common use, could draft designs covering all attractive forms of the article and secure patents for them, thus preventing the use of the article by the public, except in its most unattractive form, unless tribute be paid to him who had secured the patents.

In designs the reward of a monopoly for a given period must be confined to those who have invented new, original and ornamental designs for articles of manufacture.

In my opinion, the above quoted language is particularly applicable to the case at bar.

It seems to me that, with the allowance of a patent for the design here involved, in view of the references, the tribunals of the Patent Office would correctly understand that it is the view of a majority of this court that a much more liberal policy should be followed in determining what is inventive in design cases than has heretofore been approved by this court in the case above cited.

The tribunals of the Patent Office concurred in finding that, in view of the cited prior art, appellant's design did not involve invention. Therefore the rule is applicable that concurring decisions of the Patent Office tribunals upon a question of fact will not be disturbed by us unless manifestly wrong. This is a rule that I had supposed was of general application, and I must assume that the majority of the court is of the opinion that the Patent Office tribunals were not only wrong, but manifestly so; I am unable to understand how such a conclusion is possible upon the record before us.

In my judgment, the decision of the Board of Appeals should be affirmed.

BLAND, *J.*, concurs in this dissent.

U. S. Court of Customs and Patent Appeals

IN RE WICKERSHAM

No. 3,421. Decided February 25, 1935

[75 F.(2d) 214]

PATENTABILITY—THRESHING MACHINES.

Certain claims for a threshing machine *Held* patentable over the prior art.

APPEAL from the Patent Office. Reversed.

Messrs. Baldwin & Wight and *Mr. Donald M. Eight* for Wickersham.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

BLAND, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office, affirming the decision of the Examiner, denying patentability, in view of the prior art, of claims numbered 21, 25, 26, 28, 29, 31, 37, 38, 40 and 41 of appellant's application for a patent for improvements in threshing machines.

The Primary Examiner allowed seven claims presented in appellant's application. The Board of Appeals allowed three additional claims. All of said allowed claims involved certain combinations of elements regarded as not shown in the prior art.

The application discloses a threshing machine which comprises a substantially rigid tubular structure and which, in the preferred form, comprises a tubular metallic shell, which shell serves as the housing and support for the threshing mechanism. The shell serves as the main frame of the machine. The motive power which moves the machine is connected directly to said shell. The threshing machine mechanism, including the housing and frame, is mounted in balanced position upon an axle, which axle contains ground-engaging wheels.

Claims 21 and 37 are illustrative and follow:

21. In a harvester-thresher a sole support and housing for threshing mechanism consisting of a single member.

37. In a threshing machine, a wheeled axle, a unitary sheet metal shell member constituting the sole frame of the machine, threshing mechanism mounted within and supported by said shell, and means for positioning the shell on the axle.

The references relied upon are: Kejr, 1,027,484, May 28, 1912; Richmond, 1,287,439, Dec. 10, 1918; Best, 410,307, Sept. 3, 1889; Winslow, 1,386,298, August 2, 1921.

In affirming the action of the Examiner the Board said:

Claims 21, 25, 26, 28, 29, 31, 37, 38, 40 and 41 [the claims at bar] appear to distinguish from the references relied upon by the Examiner only in constructing the casing in which the threshing mechanism is contained and the structure supporting such casing on the axles as a single element which will act as a combined support and housing, the parts being so arranged that they will be substantially balanced on a single axle. Such a reorganization of the structures disclosed in the references relied upon would not, we consider, be a matter of invention. Claim 28 includes the limitation that the housing is provided with an aperture in one side and a header communicating with the aperture. While the machine of Best is not shown in side elevation it would seem evident that the housing of the threshing mechanism must be provided with an aperture to cooperate with the harvester shown. To substitute a header for the harvester as shown by Best would not, we feel, be a matter of invention. We feel therefore that we must agree with the Examiner that these claims should not be allowed.

Appellant, under the heading "Question Before the Court", in his brief, states the issue presented as follows:

The question now before this court therefore is—Could the structures disclosed by the references be reorganized so as to produce the structure claimed by appellant wherein the separate main frame of the prior art is eliminated without eliminating its function—without the exercise of invention?

Appellant urges here that he—

"has eliminated the separate main frame required in the prior art threshers without eliminating its function, namely, the function of supporting the mechanism and mechanism housing and serving as the main frame of the entire machine. * * * In other words, appellant has eliminated one element of the old prior art combination (the heavy main frame), by making a new element (the combined threshing mechanism housing and main frame structure— serve the functions of two old elements. * * *."

From this premise appellant argues that the elimination of a part of a machine without eliminating its function may constitute invention and cites as supporting authority *Cumming* v. *Baker & Hamilton*, 144 Fed. 395; *Standard Envelope Sealer Mfg. Co.* v.

Graywood Mfg. Co., 1 F.(2d) 667; *Postage Meter Co. v. Standard Mailing Mach. Co.*, 9 F.(2d) 19; and *In re Albert C. Fischer*, 19 C. C. P. A. (Patents) 1219, 58 F.(2d) 1060, 422 O. G. 905.

The Solicitor for the Patent Office acknowledges the soundness of the principle of law (which seems to be well settled), pressed by appellant, but replies, in substance, that what appellant did was the obvious thing to do and that the above-contended-for rule of law must also be considered with another rule referred to by the Examiner to the effect that making in one integral piece what was previously made in two pieces fastened together does not constitute invention. In support of this position the Solicitor cites *Howard et al. v. Detroit Stove Works*, 150 U. S. 164, 65 O. G. 1765.

It seems to us that the proper decision of this case may be arrived at by the application of the two principles announced in the decisions heretofore cited. Strictly speaking, as will more clearly appear later, appellant has done more than to make in one integral piece what was previously made in two or more pieces fastened together. It is not denied that the claims at bar relate to a structure possessing novelty; that such a structure as is called for by the claims at bar is useful and is an improvement over the prior art. Appellant contends that by combining the threshing machine housing and the main frame into a unitary and substantially rigid shell-like structure, the heavy weight of the main frame of the prior art structures has been eliminated without the sacrifice of rigidity and strength. Appellant also urges that by eliminating the multiplicity of beams, struts and girders of the old art and by substituting his new structure with fewer parts, he has contributed to the art enormously in economy of production.

We think an examination of the prior art and appellant's disclosure is convincing that appellant's structure possesses the advantages over the prior art which he claims for it, and that, under the reasoning of the cases relied upon by appellant, it should not be held that the claims at bar lack inventive novelty over the prior art cited.

In *Cumming v. Baker & Hamilton*, supra, it was held that it involved invention to make the wind-pipe of a portable forge perform the double function of conveying the blast and supporting certain other parts, where, in the prior art the wind-pipe performed the single function of conveying the blast. The court said:

> Except in respect to such differences as may exist between the blower of the patent in suit and that patented to Cumming in 1884, the only new idea embodied in the patent in suit is the making of the wind-pipe of the plaintiff's forge serve the double purpose of conveying the blast and supporting certain other parts of which the forge is composed. No previous forge, so far as appears, ever made the wind-pipe perform that double function. That idea was therefore new, and it was useful, too; for it reduced the number of parts of a very useful device, thereby rendering easier and more rapid its separation for transportation, and the reassembling of its various parts for use. • • •

In *Standard Envelope Sealer Mfg. Co. v. Graywood Mfg. Co.*, supra, it was said:

> But this case falls under the principle that:
> "A reconstruction of a machine, so that a less number of parts will perform all the functions of the greater, may be invention of a high order."
>
> This, in my view, is exactly what Storck did. He discovered that heavy pressure from a mechanically applied device was no necessary or helpful factor in sealing envelopes. He omitted the presser plate device, so that the new machine, with the self-sealing stack adjacent to the moistening device, performed with a less number of parts all the functions of the old model machines. He put the whole sealing job upon the stack; whereas before it had been begun in the machine and completed in the stack.

The patent was held valid in the Postage Meter Co. case, supra, and in the decision the court said:

> • • • it cannot be questioned that simplicity is the result of the inventive faculty when it succeeds in dispensing with parts which have long been in use, and which were found to be cumbersome and unnecessary, • • •.

A question quite analogous to the one at bar was presented to this court in *In re* Albert C. Fischer, supra. There the applicant had omitted a part of the prior art structure, but in the new structure retained the function served by the old omitted part. In an opinion by Lenroot, Judge, we there said:

> It is well established that there is nothing inventive in omitting a part of a device and also the function of that part. *In re* Trester, 17 C. C. P. A. (Patents) 642, 30 F. (2d) 133; *In re* Fry, 19 C. C. P. A. (Patents) 825, 54 F. (2d) 433.
>
> It is equally well established that omitting a part of a device while retaining the functions of the part omitted may be invention. *Richards v. Chase Elevator Co.*, 159 U. S. 477.
>
> • • • • • • •
>
> The question in the case at bar, in view of the foregoing authorities, is whether appellant's construction performs the functions that are performed by the device of Leach or whether the omission by appellant of the metal plate shown by Leach involved also the omission of the function performed by said plate.
>
> If the function performed by said plate is retained by appellant in his construction, then the further question arises as to whether the omission of said plate involves invention.
>
> • • • • • • •
>
> Leach shows an expansion joint composed of three members, each of different material. Appellant shows an expansion joint of a single material, performing all of the functions of the joint of Leach except the bending over of the top of the metal plate of Leach, which is not here involved. As heretofore observed, the principal function of the metal plate of Leach is to secure rigidity of his joint, and appellant has found that, by his construction, sufficient rigidity of the joint could be secured without the use of the metal plate. In other words, appellant omits a part shown by Leach, but, by means of a different construction, retains its principal function.
>
> The case is therefore differentiated from that of *In re* Trester, supra, and the question is whether appellant's construction, consisting of a single preformed plastic material, involves invention over the reference Leach.
>
> The tribunals of the Patent Office answered this question in the negative, but we are of the opinion that there is at least sufficient doubt of lack of patentability as to require the application of the rule that, in such a case, the doubt should be resolved in favor of the applicant.

We feel fully justified in saying that there is at least sufficient doubt on the question of patentability as to require the application of the well-known rule applicable to such cases, and that such doubt should be resolved in favor of the applicant.

It follows that the claims at bar should be allowed, and the decision of the Board of Appeals is reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

IN RE FAUNCE

No. 3,414. Decided February 4, 1935

[75 F.(2d) 207]

1. PATENTABILITY—PROCESS OF MAKING REMEDIAL PRODUCT.

Claims for a process for preparing a remedial product, one step of which is mixing glycerine and bile, but which do not specify the proportions thereof *Held* unpatentable over the prior art.

2. SAME—REMEDIAL PRODUCT AND PROCESS OF MAKING SAME.

A remedial product for the treatment of infections, including as an element glycerine and bile in substantially equal proportions, and claims for the process of making the same having the same limitation *Held* patentable over the prior art.

APPEAL from the Patent Office. Modified.

Mr. Royal R. Rommel for Faunce.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 10, 18, 21, and 23 to 27, inclusive, in appellant's application for a patent for an alleged invention relating to a medicinal preparation composed of animal bile and glycerine, and a process for making the same.

Claims 10, 21, and 24 are illustrative. They read:

> 10. Glyceride of bile consisting of glycerine and bile mixed in substantially equal proportions, the bile having pathogenic matter removed therefrom.
>
> 21. In the process of preparing a remedial product the steps which consist in adding glycerine to bile as a preservative, permitting them to stand for a period of substantially three months until the heavier constituents of the bile precipitate, and subsequently treating the glycerine and lighter constituents of the bile for the removal of pathogenic bacteria.
>
> 24. The process of preparing a remedial product which consists in mixing glycerine and bile in substantially equal proportions, permitting fermentation to take place without destroying the valuable cocci destroying constituents of the bile, and subsequently treating the mixture for removal of pathogenic bacterial growths.

The references are: Dustan, 64,649, May 14, 1867; Carpenter, 65,170, May 28, 1867; Rose, 137,624, April 8, 1873; Delkman, 307,748, November 11, 1884; Achard, 400,992, April 9, 1889; Wells, 1,385,195, July 19, 1921; Baron, 1,621,186, March 15, 1927.

Publications: The New Standard Formulary by Hiss & Ebert, 1920, page 199; Textbook of Bacteriology by Zinsser, pages 118 and 133; United States Dispensatory, 21st edition, pages 525 and 1421–2.

It appears from the record that appellant's medicinal preparation, known as glyceride of bile, is prepared by mixing bile and glycerine in substantially equal proportions. The mixture is permitted to stand for three months, in order that the heavier deposits may be precipitated, thus rendering the bile easier to be filtered for the removal of pathogenic matter. It appears that the glycerine, in such proportion, acts as a preservative of the medicinal properties of the bile.

Appellant states in his specification that—

> The bile and glycerine are mixed in substantially equal amounts; the glycerine preferably being added as a preservative for the bile to prevent deterioration thereof, while not interfering with the designated action thereof. An antiseptic could be used to preserve the bile, but would have an action in many cases detrimental to reconstruction of tissues, which must not be interfered with in the treatment of infections. The fresh bile and glycerine ($C_3H_5(OH)_3$) (U. S. P.) are allowed to stand for three months, in order that precipitation of the heavier deposits may take place, rendering the bile easier for filtering. Such deposits might be removed otherwise than—precipitation, such as by centrifugal action, but it is preferred to permit the same to stand for such length of time to accomplish this result. The bile liquid is then filtered through unglased porcelain filters, or asbestos filters, or any filters designed to achieve the result, that is, to remove live and dead bacteria; the dead bacterial cells being removed to obviate the creation of a vaccine or bacterin in the treatment of the patient, which might cause complicating symptoms; and the live bacterial cells being removed to prevent further infection of the tissues.

It further appears from appellant's specification that his product is used "for dissolving pus cells" and "relieving congestion," and that it is—

> "particularly well adapted for use in dental work, for infection, and • • • may be used under caps, or as a dressing for sockets after extraction to prevent the formation of pus."

It appears from an affidavit of appellant that if the glycerine is used in a minor proportion, the bile will decompose, and in a short time lose its identity; that if the glycerine is used in such proportion as to "appreciably" overbalance the bile constituent, it not only preserves the medicinal properties of the bile, but also certain pathogenic matter contained in it; and that such pathogenic matter must be destroyed in order to produce a safe pharmaceutical preparation. It further appears from the affidavit of appellant, and other exhibits of record, that appellant's product is new, useful, and of considerable merit.

The patent to Dustan relates to a liniment for use on animals for the "cure" of sprains, spavins, etc. The liniment is composed of—

> "Spirits of arnica, seven ounces; alcohol, fifteen ounces; beef gall, four ounces; camphor, two ounces; oil of origanum, two ounces."

The patent to Carpenter relates to a liniment for the "cure" of rheumatism and diseases of like character. Patentee's product is composed of—

> "Ox gall, one gallon; kerosene oil, one-half gallon; alcohol, one gallon."

The patent to Rose relates to a liniment for the treatment of rheumatic diseases, neuralgia, and headache. The liniment is composed of—

> "Eight ounces oil amber; four ounces tincture capsicum; eight ounces spirits turpentine; eight ounces laudanum; eight ounces beef-gall; eight ounces oil hemlock; eight ounces oil sassafras; four ounces tincture lobella; four ounces oil lemon; three quarts alcohol, ninety per cent."

The patent to Delkman relates to a liniment to be used in the treatment of rheumatism. The patentee used a mixture of—

> "alcohol, one quart; aqua ammonia, one pint; glycerine, one ounce; borax, one and a half ounces; chloroform, one ounce; ether, one and a half ounces; oil of sassafras, three ounces; beef's gall, eight ounces; soft water, one pint; sal-soda, one ounce; castile-soap, three pounds; oil of roses, one and a half ounces,"

and a small amount of alcohol.

The patent to Achard also relates to a liniment for the treatment of sore throat, rheumatism, sprains, bruises, etc. His liniment is composed of—

> "one gallon alcohol, one pound chloroform, six ounces ether, six ounces laudanum, six ounces gum-camphor, six ounces tincture arnica, two ounces tincture cayenne, three large beef-galls, four ounces fresh butter."

The patent to Wells relates to a remedy for hemorrhoids. His product is composed of ox bile and denatured alcohol. In his specification, the patentee states:

> • • • I add denatured alcohol in a proportion to equal in volume the volume of bile, the alcohol acting first as a thinner, and also as a solvent for a portion of the bile. However, I find that in these proportions, the alcohol will not dissolve all of the bile. The liquid is thoroughly stirred, a considerable froth resulting, which soon evaporates and disappears after the stirring operation ceases. Thus, it is my theory that bile and alcohol are not immiscible and that to a considerable extent, the bile not only goes into a solution but also chemically reacts in and forms with the alcohol a homogenous liquid. However, the amount of bile used, compared to the amount of alcohol, is in excess of the capacity of the latter as a

solvent, and this excess remains in suspension and settles to the bottom of the container after the latter stands for a short period. Of course, the bottle or container is quickly sealed after the mixture is formed to avoid evaporation.

In use, the bile acts as an astringent, in addition to its healing properties, thereby not only removing irritation and inflammation but also contracting the parts subjected to its action which in the case of hemorrhoids, serves to quickly remove the pain and obstruction attending stools.

The patent to Baron relates to a bowel evacuant. His product is composed, as stated by the patentee, of—

"glycerine, ox gall, and in its preferred form, a thickening material or agent, such as gelatine, agar-agar or similar substances, together with a liquid adapted to slightly thin the mixture to a semi-liquid or syrupy state."

The patentee further stated that in—

"the preferred form of my invention the glycerine is *present in a predominating quantity* and the thickening agent, ox gall and thinning agent in substantially equal proportions";

that the glycerine might vary—

"between 50% and 94%; the ox gall between 15% and 2%; the thickening agent between 10% and 2%; and the thinning agent between 25% and 2%." [Italics ours.]

The disclosures contained in the New Standard Formulary by Hiss and Ebert, page 199, and the Textbook of Bacteriology by Zinsser, pp. 118 and 133, are set forth in the decision of the Board of Appeals, wherein it was stated that—

The Examiner rejected the claims as lacking invention over the Formulary references in view of the patents cited. Page 199 of the Standard Formulary discloses a glycerite of ox-gall having the following composition:

Inspissated ox-gall	av. oz. 3
Glycerin	fl. oz. 2
Salicylic acid	gr. 15
Water to make	fl. oz. 6

The ox-gall in this preparation contains bile. Appellant's specification states that he obtains his bile preferably from some animal as the steer.

The Baron patent discloses a medical preparation consisting of glycerine, ox-gall, water, and gelatine. The patent states that the gelatine is used as a thickening agent and that the glycerine may vary between 50% and 94%. The remaining patents show that it is common to use bile in various medical preparations that may be used as pus solvents.

The Examiner finally rejected the claims as lacking invention over the Formula in the Textbook of Bacteriology, page 133, reading as follows:

Ox bile	900 c. c.
Glycerine	100 c. c.
Peptone	20 gms.

The Examiner held that the omission of the peptone in this formula and variations in the proportions of the ingredients would not involve invention. The Examiner notes that the steps of allowing the mixture to stand and then filtering it to remove the precipitate are old and well known steps in the art, as disclosed on page 118 of the Textbook of Bacteriology.

The brief of appellant and the contentions made therein have been carefully considered without finding reversible error in the Examiner's action. Concerning the step of "permitting fermentation" contained in claims 23 and 24, the Examiner's holding that if fermentation takes place in applicant's composition it would also take place in the compositions of the references, appears to be sound.

The publication "United States Dispensatory, 21st edition, pages 525 and 1421–2," was not discussed in the decisions of the tribunals of the Patent Office, and, in our opinion, is not of sufficient importance to warrant a statement regarding the disclosures contained therein.

It is argued by counsel for appellant that the references do not disclose a mixture consisting of glycerine and bile, only; that they do not suggest the mixing of such substances in substantially equal proportions, or the removal of pathogenic matter from the bile; that appellant's mixture of glycerine and bile in such proportions is critical; and that the product, and the process of making it, is not only new and useful, but involves invention.

[1] It may be observed that claims 21, 23, and 26 do not call for a mixture of glycerine and bile in substantially equal proportions, and, therefore, do not define appellant's real invention.

We are of opinion, as held by the tribunals of the Patent Office, that those claims, in view of the references of record, do not involve invention, and are not patentable.

[2] Each of the other appealed claims, however, calls for the use of glycerine and bile in substantially equal proportions, and the removal of pathogenic matter from the bile. Our understanding of the language "substantially equal proportions" is that although the proportions of the ingredients may vary slightly, neither will appreciably predominate.

We think it is evident that the references of record neither singly, nor in combination, anticipate appellant's process or his resultant product. Appellant has produced a new medicinal preparation, having new and valuable characteristics. Accordingly, we are constrained to disagree with the holding of the tribunals of the Patent Office that, in view of the references of record, appellant's product and process would be obvious to one skilled in the art.

It is argued by the Solicitor for the Patent Office that the Board of Appeals held that, in view of the disclosure in the Textbook of Bacteriology by Zinsser of a bile medium for blood culture, composed of bile, 900 c. c., glycerine, 100 c. c., and peptone, 20 gms., appellant had done nothing more than to omit peptone, and change the proportions of bile and glycerine, and that such modifications did not involve invention.

The answer to that proposition is that the "bile medium," referred to, is used as a blood culture; whereas, appellant's product is a new and useful remedial medicinal preparation, differing in kind and character from the products disclosed or suggested by the references, and its production, obviously, required something more than the omission of peptone and its function, and the mere variation of the proportions of the bile and glycerine ingredients.

The use of appellant's glyceride of bile in a dentifrice is discussed by us in *In re Faunce*, Patent Appeal No. 3,415, 22 C. C. P. A. (Patents) ———, ——— F.(2d) ———, decided concurrently herewith.

For the reasons stated, the decision of the Board of Appeals is affirmed as to claims 21, 23, and 26, and reversed as to claims 10, 18, 24, 25, and 27.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE CLEWELL

No. 3,404. Decided February 4, 1935

[74 F.(2d) 1001]

PATENTABILITY — ACTINIC-PROOF REENFORCED GLASS STRUCTURE—SUBSTITUTION OF MATERIAL.

Claims for an actinic-proof reenforced glass structure *Held* unpatentable over the prior art since applicant had merely substituted the improved plastic material of the K. patent for the plastic material described in the B. patent to be interposed between two sheets of glass.

APPEAL from the Patent Office. Affirmed.

Mr. Harold A. Kingsbury and *Mr. Chester H. Biesterfeld* for Clewell.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

There are here upon appeal ten claims (being all the claims), numbered, respectively, 1 to 10, of an application for patent relating to non-discoloring safety glass. The rejection by the Examiner of the United States Patent Office was based upon prior art, and his decision was affirmed upon that ground by the Board of Appeals, as more particularly hereinafter stated.

Claims 1 and 6 are regarded as fairly representative:

1. As an article of manufacture an actinism-proof reenforced glass structure comprising a sheet of glass and a layer of carbohydrate-compound plastic containing a sufficient proportion of a light-proofing plastifying agent to render the plastic substantially unaffected by actinic light.

6. As an article of manufacture a reenforced glass structure comprising a pair of glasses with a layer of pyroxylin plastic interposed therebetween and united thereto, said plastic containing not more than 12% of camphor.

The references cited are: Benedictus, 1,128,094, February 9, 1915; Benedictus, 1,182,739, May 9, 1916; Kessler, 1,456,782, May 29, 1923.

While several of the claims like No. 1, supra, do not define in express terms a construction composed of a pair of glasses with a plastic layer interposed therebetween, such as is described in claim No. 6, supra, but would seem to be met by a single sheet of glass having such a layer imposed upon it, the argument before us proceeded wholly upon the assumption that all the claims should be construed as requiring two sheets of glass united by an interposed layer of plastic material. Such we understand from the record is the practice in the art of producing what is called safety or non-shatterable glass, one of whose common uses is for windshields for motor vehicles, and it is a construction of this type which is specifically defined in appellant's specification.

Specifically, the invention which appellant claims to have made is that of a safety glass, the pyroxylin layer of which, in the language of the specification, is "* * * not subject to deterioration by the sunlight, i. e. 'actinismproof'."

After explaining that the problem of producing such glass has been approached heretofore,

"as by the use of sheets of glass which are themselves non-actinic, and, so, will protect the central plastic sheet,"

appellant's specification recites:

I have found that the discoloration of the cellulose ester plastic is, to no small extent, due to the use in the plastic of plasticizers and solvents which either themselves discolor, or have a catalytic action on the cellulose ester causing it to decompose and discolor, or have both of these objectionable qualities at the same time. In particular, I have found camphor a major offender in the respects noted; and, as is well-known, camphor is a usual and standard ingredient of cellulose ester plastics as generally produced, about 25% of this ingredient being generally present.

The specification then recites the substitution for all, or a portion of, the camphor, commonly used as an ingredient in plastic materials, of other plasticizing agents, naming amyl acetate and triacetin.

The argument on behalf of appellant is that, while others had sought to prevent discoloration by shielding the plasticizer with non-actinic glass, he discovered that a solution lies in using a plasticizer itself rendered immune to actinic action by the elimination of all, or a part of, the camphor used as a plasticizer ingredient.

The patent to Kessler is for a cellulose-ester composition. Its specification recites that the patentee had experimented to find softeners or camphor substitutes for such compositions, and sets forth, in detail, certain experiments made, particularly with glyceryl triacetate. It is not disputed that he teaches the use of triacetin as a substitute for camphor in pyroxylin plastics and also that a limited amount of camphor may be employed in addition to the triacetin. Also, the specification recites that a liquid coating composition may be made from the plastics which he describes by adding sufficient solvent, "for example methyl-alcohol and an alkyl acetate, such as ethyl or amyl acetate."

Kessler does not recite any specific use or uses of his product, but there is a claim of an increase in stability of the organic substance for cellulose esters, and while he teaches nothing with respect to its being "actinismproof" there appears to be no question but that this is one of its inherent properties.

Patent No. 1,182,739 to Benedictus discloses a manufacture of "Strengthened Glass" comprising two sheets of glass with an interposed gelatin sheet or two films of gelatin separated by a film of celluloid. The Benedictus patent, No. 1,128,094, discloses a safety glass composed of two sheets of glass with a sheet of celluloid interposed therebetween. This patent also teaches the immersion of the celluloid in a solvent such as amyl acetate.

We do not understand it to have been the view of the Board of Appeals that the use of the amyl acetate taught by Benedictus, as recited, of itself constitutes an anticipation of appellant's method of substitution, since Benedictus apparently applied it, as is suggested in appellant's brief, to a celluloid probably containing 25% camphor, merely to soften the celluloid and not as a substitute for the camphor or for any part thereof.

But the Board did hold that there was no invention in substituting the Kessler product for the celluloid of Benedictus, saying:

If Kessler's material were used in lieu of the celluloid sheet of the patent to Benedictus No. 1,182,739, the claims would be met.

In the final analysis the sole question before us is whether such holding by the Board of Appeals is erroneous, and it seems quite clear to us that it is not.

Benedictus taught the making of a strengthened article by interposing a certain type of plastic material between two sheets of glass; Kessler taught the making of an improvement in such plastic material; appellant takes the improved material and uses it in lieu of that used by Benedictus. Nothing inventive over Kessler's teachings with reference to the material itself is claimed by appellant, nor any-

thing inventive over Benedictus in the glass parts or in the manner of uniting them.

It seems to us that the facts of this case distinguish it from the cases cited as authorities on appellant's behalf, where under certain circumstances substitution of materials was held to involve invention. We can discern nothing in this case which would justify a holding that there is here presented an application that does not full within the general rule followed by this court, with citation of pertinent authorities, in the cases of *In re Otto R. Schoenwerk*, 19 C. C. P. A. (Patents) 1268, 59 F.(2d) 235, 424 O. G. 329, and *In re Fischer*, 20 C. C. P. A. (Patents) 708, 62 F.(2d) 96, 427 O. G. 261.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE ROBERTSHAW

No. 3,361. Decided February 4, 1935

[75 F.(2d) 203]

COURT OF CUSTOMS AND PATENT APPEALS—APPEAL—REMAND.

After an appeal to the Court of Customs and Patent Appeals had been duly perfected, appellant filed a petition joined in by the Commissioner of Patents that the cause be remanded to the Patent Office without reversal, affirmance, or modification on the ground that after the appeal was taken an interference with appellant's application had been instituted in the Patent Office, *Held* that the petition must be denied since a request for remand could have been made only by the proper Patent Office tribunal with such a statement of reasons for the request as was pertinent and proper.

Messrs. Byrnes, Stebbins & Blenko, Mr. William H. Webb, and *Mr. William H. Parmelee* for Robertshaw.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

The immediate question here involved grows out of a petition for remand of the above styled case to the Patent Office, as hereinafter set forth.

An application for patent by appellant, relating to improvement in valves, was finally rejected, for lack of invention over prior art cited, by the Primary Examiner of the United States Patent Office on July 24, 1933. Appeal was duly taken to the Board of Appeals and on June 21, 1934, the latter tribunal affirmed the action of the Examiner.

Thereafter appeal was taken to this court and a certified transcript of the record was duly filed with the clerk of the court on September 21, 1934. On October 20, 1934, for satisfactory reasons, the court granted a motion of appellant for a sixty-day extension of time for printing the record. Later, the court, of its own motion, entered an order giving an additional extension.

On November 12, 1934, a petition was filed on behalf of appellant, seeking a remand and return of the cause "and the transcript of record filed herein" to the United States Patent Office. At the end of this petition there was a "joinder" on the part of the Commissioner of Patents, the same being signed by the Solicitor for the Patent Office. We here quote the texts of the petition and "joinder":

PETITION TO REMAND

To the Honorable, the Judges of said Court:

Your petitioner, GEORGE A. ROBERTSHAW, appellant in the above-entitled case, respectfully represents that:

1. The application for Letters Patent involved in this appeal was duly filed in the United States Patent Office on September 17, 1926 and was thereafter duly prosecuted before the Primary Examiner in Division 39. After prosecuting this case before the Primary Examiner from September 17, 1926 until July 24, 1933, this application was finally rejected by the Primary Examiner on the latter date. Thereafter on January 20, 1934 an appeal was duly taken to the Board of Appeals of the United States Patent Office which, on June 21, 1934, denied applicant's request for a patent and affirmed the action of the Primary Examiner. Thereafter this appeal to this Honorable Court was duly taken, which appeal is now pending before it and remains unheard by said court.

2. On September 25, 1934, United States Letters Patent No. 1,974,975 were issued by the United States Patent Office to Louis Stein and Walter C. Peters on an application therefor filed September 30, 1932. This patent relates to exactly the same subject matter as the application involved in this appeal; both applicants were claiming exactly the same subject matter; and the applications were copending in the Patent Office. An interference should have been but was not declared by the Patent Office between these two applications during their pendency in the Patent Office.

3. Since the discovery by petitioner of this error on the part of the United States Patent Office, appropriate steps have been taken by the petitioner in order to obtain an adjudication of the question of priority as between petitioner and the patentees of the aforesaid patent. On November 7, 1934, the United States Patent Office in accordance with the statutes and rules in such cases made and provided, declared an interference between petitioner's application Serial No. 136,039, the application involved in this appeal to this court, and said Stein et al. Patent No. 1,974,975, said interference being identified as No. 69,678. A correct copy of the declaration of the aforesaid interference is attached hereto and marked "Exhibit A."

4. It is essential that this cause and the transcript of record filed herein be remanded and returned to the United States Patent Office to the end that full and appropriate proceedings may be had in the United States Patent Office in accordance with the statutes and rules in such cases made and provided. As appears from paragraphs 2 and 3 of page 2 of "Exhibit A" attached hereto consideration de novo will be given this application including the claims now pending before this court.

Wherefor your petitioner prays that this cause and the transcript of record filed herein be remanded and returned to the United States Patent Office for further proceedings in accordance with the statutes and rules in such cases made and provided.

JOINDER

The Commissioner of Patents hereby joins in the foregoing petition to remand and return this cause and the transcript of record therein to the United States Patent Office for further proceedings.

Affidavit in support of the petition was made by one of the attorneys for appellant.

It is noted from the transcript of record, filed in the appeal to this court, that appellant gave the notice of appeal to the Commissioner of Patents on August 7, 1934, and, in a brief in support of the petition to remand, the statement is made that the decision of the Board of Appeals sustaining the right of Stein and Peters to patent was rendered on that same day. The patent in fact issued under date of September 25, 1934, according to the petition. The petition does not state the date upon which notice of the patent was first brought to appellant's attention, but it does allege that "this patent relates to exactly the same subject matter" as appellant's application; that since the application of appellant and that of Stein and Peters were copending, an interference should have been declared, and that, following discovery of this situation, appellant took appropriate steps "to obtain an adjudication of the question of priority" between the parties.

The exact nature of the steps taken is not revealed by the record, but apparently the procedure comprised, at least in part, the copying of two claims

from the patent into appellant's application and requesting an interference. These were claims 1 and 2 of the patent and they became claims numbered 38 and 39, respectively, in appellant's application. The interference so sought was declared, apparently on November 7, 1934.

As Exhibit A to the petition for remand, there was filed what purports to be a copy of the interference so declared. It sets forth two counts numbered 1 and 2, respectively, they being in the identical language of claims 1 and 2 of the patent.

These two counts, however, are not in the specific language of any of the claims involved in the appeal and no one of the appealed claims is embraced in the interference. It should be said that the appeal involves only three claims. These are numbered 33, 34 and 35, respectively. At one period during the prosecution of the case in the Patent Office two other claims numbered 36 and 37, respectively, apparently were presented, but these had been, in some way, eliminated prior to the final decision of the Examiner.

For the purposes of the question now before us, it will be assumed by us that the procedure above related was in conformity with the Patent Office practice and that, although the appeal to this court as to certain claims had been taken, the application of appellant still remained in the Patent Office in such position as that he was entitled to proceed as he did proceed.

We deem it of importance to note just here that the petition for remand does not set forth the taking of any action by appellant, in the Patent Office itself, looking toward a *reconsideration* by the tribunals of that office of the claims involved in the appeal. It may be assumed that it was the view of appellant that since the appeal to this court had been perfected, before he had any notice of the patent, nothing further concerning the appealed claims could be done in the Patent Office, unless they were remanded without any decision upon the merits by this court.

However this may be, it is sufficient at this point to say that the only specific action sought of the Patent Office (other than possibly the securing of the joinder by the Commissioner in the petition for remand) was the declaration of the interference which did not relate specifically to the appealed claims, and this action was taken.

In view of the apparent novelty of the question presented by the petition for remand, this court requested counsel for petitioner to furnish brief with any authorities available "in support of the right of the court to remand without a reversal, affirmance, or modification" of the decision of the Board of Appeals.

Counsel has favored us by so doing. The only authority cited which relates specifically to procedure in appeals to the courts from decisions of the tribunals of the Patent Office is the case of *Podlesak* v. *McInnerney*, 1906 C. D. 558; 26 App. D. C. 399. The Solicitor for the Patent Office appended a statement to the brief supplied by attorneys for petitioner, in which he stated his agreement therewith, "particularly in view of" the said *Podlesak* case, supra.

We note that while in the said case, the Court of Appeals of the District of Columbia, obviously upon its own motion, did remand the cause (an interference proceeding) for certain specific reasons without a formal declaration of reversal, nevertheless it stated in the body of the opinion, " * * * we consider that an error has been committed in this case * * * ."

It is our view that while the *Podlesak* case, supra, constitutes a precedent for remanding a case to the Patent Office, under certain circumstances, without any formal reversal, affirmation or modification of the decision on appeal, the facts of the instant case do not justify the application of the rule there followed.

It may be pointed out that this court, in the case of *In re Benjamin Greenfield*, 17 C. C. P. A. (Patents) 1217, 40 F.(2d) 775, 400 O. G. 226, of its own motion, remanded certain claims for consideration *de novo*, but there was an express reversal of the decision of the Board of Appeals as to such claims for reasons specifically pointed out in our opinion. The course followed in the *Greenfield* case, supra, has no applicability here.

The brief on behalf of petitioner presents the view that there is an analogy between the situation here and that respecting cases wherein a hearing has been had before a United States District Court and a final decree entered and an appeal to the Circuit Court of Appeals, and during the pendency of the appeal, and before determination thereof, a rehearing or review is desired "because of some error of law apparent on the face of the record or because of new matter or newly discovered evidence."

Specifically, the brief says:

The present case is more closely analogous to those cases wherein a rehearing is desired before the District Court while the appeal to the Circuit Court of Appeals is still pending but remains undecided, for [because] the request for a declaration of the interference between appellant's application and the Stein et al. patent is akin to a petition for rehearing based on new matter or error of law apparent on the face of the record. The decision of the Board of Appeals of the Patent Office denying appellant's right to a patent was rendered on June 21, 1934 and this decision could not be said to be final so as to be not subject to rehearing until after the expiration of six months from June 21, 1934.

In illustration of the practice in United States District and Appellate Courts, there are cited numerous authorities, including the cases of *Roemer* v. *Simon et al.*, 91 U. S. 149, recently approved by the Supreme Court in *Realty Acceptance Corp.* v. *Montgomery*, 284 U. S. 547, 551; *Cimiotti Unhairing Co.* v. *American Unhairing Mach. Co.* and *Cimiotti Unhairing Mach. Co.* v. *Mischke*, 99 Fed. 1003 (vide also 108 Fed. 82); *Baltimore S. S. Co. et al.* v. *Phillips*, 9 F.(2d) 902 (C. C. A. 2); *Wagner et al.* v. *Meccano, Limited*, 235 Fed. 890 (C. C. A. 6); *Harper Bros. et al.* v. *Klaw et al.*, 272 Fed. 894 (C. C. A. 2); *Nutter et al.* v. *Mossberg et al.*, 118 Fed. 168; *Greene et al.* v. *United Shoe Machinery Co.*, 124 Fed. 961 (C. C. A. 1); *Mutual Life Ins. Co. of New York* v. *Lipp*, 28 F.(2d) 863 (C. C. A. 9) and *Jensen et al.* v. *New York Life Ins. Co.*, 50 F.(2d) 512 (C. C. A. 8).

The foregoing list of authorities is here given because of our thought that the question presented is one which may be of moment to all those interested in patent procedure. It is not necessary here to review the cases in detail, nor to quote elaborately from the opinions. The principle announced in the leading case, that of *Roemer* v. *Simon et al.*, supra, and, as stated, recently reaffirmed by the Supreme Court in the *Realty Acceptance Corp.* case, supra, has been consistently followed practically without modification, in all the subsequent cases cited.

In the *Roemer* v. *Simon et al.* case, supra, the situation was that a final decree had been rendered (in 1874) by the United States Circuit Court for the District of New Jersey, dismissing the bill of complaint and an appeal taken to the Supreme Court. During the pendency of this appeal there was presented on behalf of appellant a petition and affidavit, stating, in substance, that new and material evidence, previously unknown to him, had been discovered after the appeal, and motion was made that leave be granted the appellant to give appellees the requisite notice of a further motion for a rule requiring them to show cause why the Supreme Court should not remit the record to the court below for a rehearing of the cause.

In denying the motion, Mr. Chief Justice WAITE said:

> It is clear, that, after an appeal in equity to this court, we cannot, upon motion, set aside a decree of the court below, and grant a rehearing. We can only affirm, reverse, or modify the decree appealed from, and that upon the hearing of the cause. No new evidence can be received here. Rev. Stat. sec. 698. The court below cannot grant a rehearing after the term at which the final decree was rendered. Equity Rule, 88. It would be useless to remand this cause, therefore, as the term at which the decree was rendered has passed. If the term still continued, the proper practice would be to make application to the court below for a rehearing, and have that court send to us a request for a return of the record, in order that it might proceed further with the cause. Should such a request be made, we might, in a proper case and under proper restrictions, make the necessary order; but we cannot make such an order on the application of the parties. The court below alone can make the request of us. The application of the parties must be addressed to that court, and not to us.

Assuming, without deciding, that there is such an analogy between the procedure with respect to patents, where matters are appealed to this court, and the procedure in the District and Appellate Courts of the United States, as that the practice in the latter may be and should be applied in the former, it seems proper to point out that the practice stated to be proper in the *Roemer* v. *Simon* case, supra, was not followed by appellant here.

Appellant here comes directly to this court (which, except where procedure is had under section 4915, Revised Statutes, is, under the authorities, the tribunal of final jurisdiction over appeals from the Patent Office) with a petition for remand.

It would seem that his course should have been to make the proper application to the proper tribunal of the Patent Office (and we do not undertake here to say which would be the proper tribunal) and have that tribunal alone send to us a request for a return of the record with such a statement of reasons for the request as were pertinent and proper.

We do not overlook the fact that the Commissioner of Patents joined in appellant's petition in the manner already set forth, but neither may we overlook the further fact that there is no statement by the Commissioner which concedes error of either law or fact, or even states any belief that error may have been committed. We do not find any statement by the Commissioner indicating any desire or purpose that the appealed claims shall be reconsidered by the tribunals of the Patent Office.

It is true that the copy of the Declaration of Interference, filed as Exhibit A to the petition, contains the following statements:

> After termination of the interference this application will be held for restriction and revision under rule 90.
> Claims 33 to 37 will be held subject to rejection as unpatentable over the issue in the event of an award of priority adverse to applicant.

and that, alluding to the foregoing statements, the petition says:

> As appears from paragraphs 2 and 3 of page 2 of "Exhibit A" attached hereto consideration de novo will be given this application including the claims now pending before this court.

Except for whatever implication might arise from the joinder by the Commissioner in a petition containing such averment, we are unable to concur in the suggestion that such is the purpose. We do not deduce from the quoted statements themselves that there is any purpose of reconsideration by the tribunals of the Patent Office of the appealed claims.

The normal construction of the statements, it seems to us, is that the application, with only such of its claims as are now in the Patent Office will be held for revision, and that the appealed claims, now standing rejected upon prior art, eventually will be also subject to rejection as unpatentable over the interference issue, should priority be awarded adverse to appellant. In other words, even if this court should reverse the decision of the Board of Appeals in the *ex parte* case, and hold the claims patentable over the cited art, they still will be subject to rejection over the issue of the interference should appellant lose on the issue of priority. However, should appellant be awarded priority in the interference proceeding and should this court in a hearing upon the merits hold the appealed claims patentable, appellant presumably will then receive patent both upon those claims which are in interference and those upon appeal.

In any event, we are unable to construe the petition obviously prepared wholly by a party—indeed the only party, since it is an *ex parte* case—and merely joined in by the Commissioner, as constituting a request, such as brings the case within the rule of "proper practice" announced by the court in the *Roemer* v. *Simon* case, supra. Under the rule of that case (still assuming, without holding, that it is applicable in patent practice)—

> "we cannot make such an order [of remand] on the application of the *parties*. The court [here the proper tribunal of the Patent Office] below alone can make the request of us." [Italics ours.]

It may be further observed that it is not seen how appellant's legal rights are in anywise jeopardized by a declination to remand the case, nor indeed how they would be promoted or protected by such remand. The case is before us *ex parte* and may be heard and disposed of upon its merits without prejudice to the interference proceeding and the Commissioner of Patents makes no statement as to either facts or law indicating that determination of the interference proceeding is in anywise dependent upon having the appealed claims returned, or that they might be placed in the interference if returned.

In the cases of *In re McPherson*, 20 C. C. P. A. (Patents) 1022, 64 F.(2d) 364, 433 O. G. 514, and *In re Schaeffer*, 20 C. C. P. A. (Patents) 1208, 65 F.(2d) 474, 435 O. G. 496, we held that, even assuming, without deciding, our authority to remand, the reasons then presented did not justify such a course. The same is true here, but because the matter has been here presented in a new and more formal way, we have felt constrained to discuss certain phases of the question at greater length than at any time heretofore.

The petition for remand is denied.

Patent Suits

(Notices under sec. 4921, R. S., as amended Feb. 18, 1922)

1,108,236, H. M. Reynolds, Roofing shingle, D. C., N. D. Ohio, E. Div., Doc. 3422, *The Patent & Licensing Corp.* v. *Weaver Wall Co.* Claims 1 and 2 held not infringed. Bill dismissed May 15, 1935.

1,115,866, H. M. Reynolds, Roofing shingle, D. C., N. D. Ohio, E. Div., Doc. 3701, *The Patent & Licensing Corp.* v. *Weaver Wall Co. et al.* Claims 1 and 2 held void. Bill dismissed May 15, 1935.

1,131,363, J. C. Garrett, Voting machine, D. C., S. D. N. Y., Doc. E. 65/374. *American Voting Machine Corp. et al* v. *The City of New York et al.* Dismissed on the merits (notice May 15, 1935).

1,150,298, F. C. Overbury, Shingle strip, D. C., N. D. Ohio, E. Div., Doc. 3697, *The Patent & Licensing Corp.* v. *Weaver Wall Co. et al.* Patent held valid and infringed May 15, 1935.

1,194,752, T. H. Krueger, Moistening device for gummed stickers or labels; 1,567,655, 1,638,815, same, Tape serving device, 1,638,816, same, Tape serving device with inclined guide, D. C., S. D. Ohio, W. Div., Doc. E 165, *Better Packages, Inc.*, v. *Package Service Corp. et al.* Claims 26, 30 and 37 of 1,567,655; claims 8, 9, 10, 11, 13, 19, 20 and 28 of 1,638,815, and claims 1, 3, 7, 8 and 9 of 1,638,816 held valid and infringed. Claim 28 of 1,567,655, and claims 22, 24, 26 and 27 of 1,638,815 held invalid April 25, 1929.

1,213,695, J. B. Scutti, Cloth covered buckle, D. C., S. D. N. Y., Doc. E 63/12, *Liberty Die & Button Mould Co., Inc.* v. *J. Rabinowitz.* Consent order of discontinuance (notice May 13, 1935).

1,245,647, L. Weinstein, Wear-plate for the soles of shoes, D. C., N. D. Ill., E. Div., Doc. 11,145, *L. Weinstein (Security Shoe Supply Co.)* v. *B. L. Marder Co. et al.* Dismissed without prejudice April 16, 1935.

1,260,766, E. J. Granger, Folding and plaiting machine, D. C. Mass., Doc. E 3919, *E. J. Granger* v. *L. Spero (N. E. Doll & Novelty Co.).* Consent decree dismissing bill Oct. 29, 1934.

1,262,860, F. B. Smith, Incubator, D. C. Mo. (Kansas City), Doc. 2682, *S. B. Smith* v. *F. Boehm.* Judgment for plaintiff May 23, 1935. Same, D. C. Minn., 4th Div., Doc. E 2723, *S. B. Smith* v. *L. W. Street.* Claim 1 held valid and infringed May 17, 1935. Same, filed April 2, 1935, D. C., S. D. Iowa (Des Moines), Doc. E 4564, *S. B. Smith* v. *H. Young.* Same, filed Apr. 4, 1935, D. C., S. D. Iowa (Des Moines), Doc. E 4567, *S. B. Smith* v. *F. L. Ryan.*

1,344,223, G. H. Davis, Shelf facing, filed May 21, 1935. D. C., N. D. Ill., E. Div., Doc. 14,555, *F. M. Zimmerman* v. *The Royal Blue Stores, Inc.*

1,359,880, C. Dunn, Self filling fountain pen, filed May 21, 1935, D. C., S. D. N. Y., Doc. E 80/248, *M. B. Swanholm* v. *Gimbel Bros., Inc.*

1,386,949, F. E. Rice, Tap attaching device, D. C., N. D. Ohio, E. Div., Doc. E 4801, *American Tap Bush Co.* v. *Fanner Mfg. Co.* Dismissed without prejudice Apr. 30, 1935.

1,410,499, A. Pacz, Metal and its manufacture, D. C., S. D. Calif. (Los Angeles), Doc. E Y–78–M, *General Electric Co.* v. *T. Anraqu (Tokyo Lamp Co.).* Doc. E Z–46–M, *General Electric Co.* v. *International Lamp Co., Inc.* Doc. E Z–75–C, *General Electric Co.* v. *Pacific Importing Co. et al.* Claims 25, 26 and 27 held valid and infringed May 14, 1935, in each of above cases.

1,505,624, R. R. Candee, Bailer bottom, D. C., S. D. Calif. (Los Angeles), Doc. E 312–C, *R. R. Candee et al.* v. *Shull Perforating Co., Ltd.* Patent held valid April 8, 1935.

1,516,932, L. Staab, Note book with exchangeable leaves, filed May 11, 1935, D. C., N. D. Ill., E. Div., Doc. 14,535, *La Reliure Spirale Societe* v. *F. Amato (Spiral Binding Co.).*

1,526,082, E. W. Hill, Stencil sheet, filed May 16, 1935, D. C., E. D. Mich. (Detroit), Doc. 6996, *A. B. Dick Co.* v. *C. H. Eddy (Stain-Go Laboratories).*

1,537,564, E. B. Symons, Gyratory cone crusher, D. C., E. D. Wis. (Milwaukee), Doc. 3397, *Nordberg Mfg. Co.* v. *Smith Engineering Works.* Claims 2 and 7 held valid and infringed May 18, 1935.

1,544,012. (See Re. 17,887.)

1,547,388, J. Harris, Blow pipe, filed May 13, 1935, D. C., W. D. Pa., Doc. E 3073, *The Harris Calorific Co.* v. *D. A. Marra (National Torch Tip & Machine Co.).*

1,555,628, A. M. Brenne, Friction shock absorbing mechanism, filed May 15, 1935, D. C., N. D. Ill., E. Div., Doc. 14,545, *W. H. Miner, Inc.* v. *Peerless Equipment Co.*

1,562,269, G. L. Williams, Process for tempering light alloys, filed April 29, 1935, D. C., N. D. Ill., E. Div., Doc. 14,437, *G. L. Williams* v. *Aluminum Co. of America.*

1,567,655. (See 1,194,752.)

1,569,753, L. C. Hutchinson, Electric switch lock, D. C., S. D. Calif. (Los Angeles), Doc. E Z–84–J, *H. L. Sandberg et al.* v. *Electric Equipment Co.* Dismissed with prejudice May 10, 1935.

1,569,823, F. Maccarone, Shoe structure, D. C., E. D. N. Y., Doc. E 7349. *F. Maccarone et al.* v. *Pincus & Tobias, Inc.* Decree for defendant dismissing bill May 20, 1935.

1,578,725, I. M. Hackney, Acetylene generator, D. C., N. D. Ill., E. Div., Doc. 11,613, *F. Hackney* v. *Imperial Brass Mfg. Co.* Claims 3, 4, and 8 held valid and infringed July 22, 1933. Decree affirmed Apr. 3, 1935.

1,582,434, A. Simons, Apparatus for drawing wire, D. C., S. D. N. Y., Doc. E 63/246. *Master Wire Die Corp.* v. *Union Wire Die Corp. et al.* Consent and order of discontinuance (notice May 13, 1935).

1,593,791, C. G. Butler, Lubricating apparatus, D. C., N. Dak. (Fargo), Doc. E 519, *Stewart-Warner Co.* v. *Jiffy Lubricator Co.* Claim 1 held valid but not infringed. Supplemental bills dismissed Mar. 18, 1935.

1,604,339, H. A. Cumfer, Roofing element and roof made thereof, D. C., N. D. Ohio, E. Div., Doc. 3423, *The Patent & Licensing Corp.* v. *Weaver Wall Co.* Claims 7 to 15 incl. held invalid for lack of invention; bill dismissed May 15, 1935.

1,608,622, Schmidt & Lee, Process for preventing the dissolution of iron and steel in sulphuric acid and pickling baths, filed May 25, 1935, D. C., N. D. Ohio, E. Div., Doc. 5226, *American Chemical Paint Co.* v. *Firestone Steel Products Co.*

1,610,567, Marsh & Cochran, Annealing of sheet steel, D. C., N. D. Ohio, E. Div., Doc. E 3337, *The Surface Combustion Co., Inc.* v. *Newton Steel Co. et al.* Bill dismissed, injunction and order of injunction vacated; counter-claim for Re. 17,413, A. T. Kathner, Annealing and heat-treating furnace, and 1,725,398, same, Metal-treating furnace, dismissed April 6, 1935.

1,638,815. (See 1,194,752.) 1,638,816. (See 1,194,752.)

1,652,910, L. W. Hottel, Means for forming plastic articles, D. C., S. D. Calif. (Los Angeles), Doc. E 70–C, *The Richardson Co. et al. v. Standard Battery Box Mfg. Co., Ltd.* Dismissed without prejudice Jan. 28, 1935.

1,666,873, A. C. Durdin, Jr., Duplex pumping apparatus, D. C., N. D. Ill., E. Div., Doc. 10,446, *Chicago Pump Co. v. Weil Pump Co.* Dismissed for want of equity April 5, 1935.

1,669,888, P. F. Wollenweber, Ignition device; 1,735,112, C. F. Gilchrist, Switch, appeal filed April 22, 1935, C. C. A., 2d Cir., Doc. —, *The Electric Auto-Lite Co. v. P. & D. Mfg. Co., Inc.*

1,685,260, L. L. Findley, Powder placing syringe, D. C., S. D. Calif., C. Div., Doc. E 117–H, *L. L. Findley v. Research Prescription Pharmacy et al.* Dismissed May 13, 1935.

1,718,176, H. W. Nordendale, Die punching method, D. C., N. D. Ill., E. Div., Doc. 9394, *Nordendale Mfg. Co. v. Transformer Corp. of America.* Dismissed without prejudice April 3, 1935.

1,725,398. (See 1,610,567.) 1,735,112. (See 1,669,888.)

1,755,252, E. W. Goeser, Upset lock pin for chain belt, D. C., S. D. Calif. (Los Angeles), Doc. E V–69–C, *Emsco Derrick & Equipment Co. v. Link Belt Co.* Patent held valid, injunction granted May 8, 1935.

1,757,001, G. C. Beidler, Photographic apparatus, D. C., W. D. N. Y., Doc. 1616, *G. C. Beidler v. Photostat Corp.* Dismissed May 17, 1935.

1,758,146, W. M. Cross, Domestic heating system, D. C. Mo. (Kansas City), Doc. 2430, *Mid-Continent Investment Co. v. W. M. Schermes.* Decree for plaintiff May 21, 1935.

1,777,256, J. C. Daley, et al., Transformer, D. C., N. D. Ill., E. Div., Doc. 10,529, *Jefferson Electric Co. v. Thordarson Electric Mfg. Co.* Dismissed without prejudice Jan. 3, 1935.

1,791,081, E. R. Selter, Book making machine, filed May 8, 1935, D. C., N. D. Ill., E. Div., Doc. 14,521, *T. W. & C. B. Sheridan Co. v. W. F. Hall Printing Co. et al.*

1,796,979, G. A. Bells, Radius gauge, filed May 10, 1935, D. C., S. D. Ill., N. Div., Doc. 1303, *Weaver Mfg. Co. et al. v. Bear Mfg. Co.*

1,804,787, F. Kullmer, Metal window, filed May 17, 1935, D. C., N. D. Calif. (San Francisco), Doc. E 3874–S, *Soule Steel Co. v. Michel & Pfeffer Iron Works, Inc. et al.*

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 25, 1935

[VOL. 455- No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 350,141. FRANK L. GAIER, Milford, Del. Filed Apr. 18, 1934.

OPTIKOL

For Impression Taking and Casting Materials Made of Plastic Stone and Other Substances for All Purposes for Which Such Impressions or Castings are Needed.

Claims use since Apr. 1, 1934.

Ser. No. 363,970. EBERLE TANNING COMPANY, Westfield, Pa. Filed Apr. 19, 1935.

No claim is made to the exclusive use of the word "Oak" apart from the mark.

For Sole Leather.

Claims use since Apr. 1, 1935.

Ser. No. 364,925. PARAGON RUBBER CORPORATION, New York, N. Y. Filed May 14, 1935.

PARATEX

For Semi-Hard Rubber Composition Material Used in the Manufacture of Toys and Dolls.

Claims use since Mar. 1, 1935.

CLASS 5

Adhesives

Ser. No. 363,063. C. W. RENSTROM, doing business as Tip-Top Products Company, Omaha, Nebr. Filed Mar. 27, 1935.

HEATLESS
LIQUID
SOLDER

No claim is made to the words "Heatless Liquid Solder" apart from the mark as shown.

For Liquid Solder (a Fluid, Metallized, Adhesive Cement.)

Claims use since May 9, 1933.

Ser. No. 363,546. THE AUTOSAN CORPORATION OF AMERICA, New York, N. Y. Filed Apr. 9, 1935.

No claim is made to the representation of a tire apart from the mark as shown.

For Composition in the Nature of an Adhesive for Preventing Flat Tires.

Claims use since Mar. 10, 1935.

Ser. No. 364,817. THE GORDON PROCESS COMPANY, Columbus, Ohio. Filed May 11, 1935.

GOPRO

For Pyroxylin Cements Specifically Employed in Uniting Leather Surfaces.
Claims use since Jan. 15, 1935.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 360,389. THE PIONEER MFG. COMPANY, Cleveland, Ohio. Filed Jan. 18, 1935.

ACTO

For Disinfectants, Germicides, Liquid Insecticides, and Sprays.
Claims use since July 13, 1933.

Ser. No. 363,637. PARFUMERIE ST. DENIS, New York, N. Y. Filed Apr. 11, 1935.

Applicant disclaims the word "Gardenia" apart from the mark.
For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Skin Whitener in Liquid, Cream, or Solid Form, Eyebrow and Eyelash Grower, Eye Drops, Eyebrow Pencils, Chemical Preparations for the Darkening of Eyelashes and Eyebrows, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Dusting Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Crystals, Bath Oil, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Depilatories, Nail Powders, Nail Polishes, Nail Creams, Nail Bleaches, Witch Hazel Salve, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Cologne, Perfumes, and Toilet Waters.
Claims use since Jan. 31, 1933.

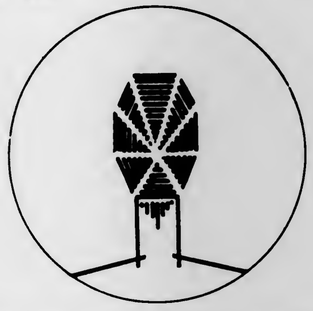
Ser. No. 363,993. BECK, KOLLER & CO., INC., Detroit, Mich. Filed Apr. 20, 1935.

Beckolbase Synthetics

No claim is made to the word "Synthetics" apart from the remainder of the mark.
For Resins, Including Synthetic Resins and Processed Natural Resins; Resin Solutions, Including Plastic Resin Solutions; and Oils, Including Processed Oils and Synthetic Oils, for Use in the Industrial Arts.
Claims use since December, 1934.

Ser. No. 364,001. COTY, INC., New York, N. Y. Filed Apr. 20, 1935.

"Stow-away"



For Perfumes.
Claims use since Mar. 6, 1935.

Ser. No. 364,008. THE GIBBS MANUFACTURING COMPANY, Canton, Ohio. Filed Apr. 20, 1935.

A·V·A

For Chemical Preparation Used as a Deodorizer.
Claims use since Mar. 20, 1935.

Ser. No. 364,010. INECTO, INC., New York, N. Y. Filed Apr. 20, 1935.

For Hair Dyes, Hair Brighteners, Shampoo Tints, Hair Rinses.
Claims use since Mar. 7, 1935.

Ser. No. 364,031. R. T. VANDERBILT COMPANY, INC., New York, N. Y. Filed Apr. 20, 1935.

No claim is made to the words "American Products—N. Y." apart from the mark shown.
For Enzyme Used in Converting Starch.
Claims use since Apr. 3, 1935.

Ser. No. 364,038. ZOTOS CORPORATION, New York, N. Y. Filed Apr. 20, 1935.

QM

For Hair Waving Solutions.
Claims use since July 20, 1932.

Ser. No. 364,039. ZOTOS CORPORATION, New York, N. Y. Filed Apr. 20, 1935.

QS

For Hair Waving Solutions.
Claims use since July 20, 1932.

Ser. No. 364,071. THE PHARMACEUTICAL PRODUCTS COMPANY, LIMITED, London, England. Filed Apr. 22, 1935.

SOLUROL

For Medicine for the Treatment of Gouty and Rheumatismal Affections as a Dissolvent of Uric Acid.
Claims use since Jan. 1, 1904.

Ser. No. 364,113. MONITE COMPANY, St. Louis, Mo. Filed Apr. 22, 1935.

Monite

For Mothproofing Materials.
Claims use since Dec. 30, 1933.

Ser. No. 364,284. THE GENERAL PHARMACAL COMPANY, Cincinnati, Ohio. Filed Apr. 27, 1935.

FeyeX

For Eye-Wash.
Claims use since Apr. 12, 1935.

Ser. No. 364,302. PACIFIC COAST BORAX COMPANY, New York, N. Y. Filed Apr. 27, 1935.

20 MULE TEAM

For Borax, Boric Acid, Boric Acid Spangles, Borax Compounds Used for Antiseptic Purposes, and Talcum Powder.
Claims use since 1904 on talcum powder; since September, 1891, on remaining goods.

CLASS 8

Smokers' Articles, Not Including Tobacco Products

Ser. No. 363,915. EXOTIC VANITIES, INC., New York, N. Y. Filed Apr. 18, 1935.

GLYDAWAY

For Cigarette Cases.
Claims use since Jan. 2, 1935.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 362,896. WINCHESTER REPEATING ARMS COMPANY, New Haven, Conn. Filed Mar. 22, 1935.

EZXS

For Cartridges for Use in Rifles or Revolvers or Both.
Claims use since Jan. 5, 1935.

CLASS 11

Inks and Inking Materials

Ser. No. 363,297. THE SHERWIN-WILLIAMS CO., Cleveland, Ohio. Filed Apr. 1, 1935.

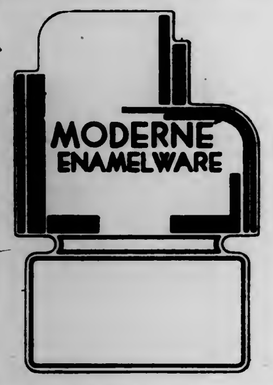
PERMANSA

For Ink Pigments, Printing Inks and Lithographing Inks.
Claims use since Aug. 24, 1933.

CLASS 12

Construction Materials

Ser. No. 364,871. HUTTIG SASH & DOOR COMPANY, St. Louis, Mo. Filed May 13, 1935.



The word "Sash" is disclaimed apart from the mark as shown.
For Mill Work, Particularly Sash.
Claims use since Apr. 25, 1935.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 345,850. FEDERAL ENAMELING & STAMPING COMPANY, McKees Rocks, Pa. Filed Jan. 8, 1934.

The words "Moderne" and "Enamelware" are disclaimed apart from the mark shown.

For Enameled Base Metal Pots, Pans, Teakettles, Teapots, Coffee Percolators, Drip Coffee Makers, Roasters, and Covers Therefor.

Claims use since Jan. 6, 1934.

Ser. No. 362,632. SACKS-BARLOW FOUNDRIES, INC., Newark, N. J. Filed Mar. 16, 1935.

EAGLE

For Heel, Toe and Sole Plates for Boots and Shoes.
Claims use since Nov. 6, 1933.

Ser. No. 363,194. THE SANITARY FIXTURES COMPANY OF NORTH AMERICA, New York, N. Y. Filed Mar. 28, 1935.

KLEENSAN

For Bidets, Toilet Bowls, Toilet Seats, Lavatories, Bathroom Fixtures, and Sanitary Attachments for Toilets and Bidets for Internal Irrigations.
Claims use since Feb. 21, 1935.

Ser. No. 363,770. THE STANLEY WORKS, New Britain, Conn. Filed Apr. 15, 1935.

Trade-mark consists of a narrow orange stripe applied lengthwise to the surface of the box strapping; no claim being made to the representation of the box strapping per se.

For Box Strapping.
Claims use since May 15, 1934.

Ser. No. 364,158. WOLVERINE BRASS WORKS, Grand Rapids, Mich. Filed Apr. 24, 1935.

"Torchline"

For Metal Pipe Elbows, T's, Couplings, Y's, Unions, Bushing, Plugs, Caps.
Claims use since Jan. 1, 1934.

Ser. No. 364,159. WOLVERINE BRASS WORKS, Grand Rapids, Mich. Filed Apr. 24, 1935.

WB

For Traps for Plumbing, Sink, Lavatory and Wash Tray Connections, Wastes and Overflows, Supplies, Wastes and Shoers for Concealed Work, Shower Bath Sprays, Heads and Supports, Mixing Valves for Showers, Exposed Showers, Compression Stops, Compression Stops and Drains, Globe and Gate Valves, Ground Key Stops, Ground Key Stops and Drains, Bibbs, Double Sink Faucets, Bath Faucets, Laundry Faucets, Lavatory Faucets, Pantry and Shampoo Faucets, Combined Supply and Waste Lavatory Fixtures, Pressure Relief Valves, Lawn Faucets, Sediment Faucets, Basin and Bath Supplies, Slip Joint Connections, Ground Joint Connections, Threaded Collars, Trap Bushings, Slip Joint Nuts, Solder Fittings for Tubing, Brass Ferrules, Boiler Couplings, Brass Tubing and Pipe, Float Valves, Floats for Tanks, Adjustable Guides, Tank Levers, Flush Valves, Closet Elbows, Flanges with Spring Holders, Toggle and Expansion Bolts, Closet Screws, Tap Plugs, Closet Floor Flanges, Closet Elbows, Tank Balls, Rubber Plugs, Fuller Balls, Faucet Washers, Tapered Slip Joint Washers.
Claims use since Mar. 1, 1915.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 364,968. OHIO FERRO-ALLOYS CORPORATION, Canton, Ohio. Filed May 15, 1935.

The words "Brand", "Quality", "Service", and "Dependability" are disclaimed apart from the mark.

For Ferro-Alloys—Namely, Ferro Silicon, All Grades; Ferro Chrome; Ferro Manganese and Silico Manganese.
Claims use since Apr. 23, 1935.

CLASS 15

Oils and Greases

Ser. No. 360,234. MOTOR OILS REFINING CORPORATION, Chicago, Ill. Filed Jan. 14, 1935.

No claim is made to the word "Tempered" apart from the mark shown. Applicant disclaims the words "A Rectified Lubricant" and "Motor Oil."

For Lubricating Oils and Greases.
Claims use since Dec. 4, 1934.

Ser. No. 363,126. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 28, 1935.

For Cutting Oils.
Claims use since June 14, 1934.

Ser. No. 364,004. ESSO INC., Newark, N. J. Filed Apr. 20, 1935.

ESSOLITE

For Lubricating Oils.
Claims use since May 15, 1934.

Ser. No. 364,168. AMERICAN REFINING COMPANY, INCORPORATED, New York, N. Y. Filed Apr. 25, 1935.

AMEROIL

For Motor Lubricating Oil.
Claims use since Mar. 4, 1935.

Ser. No. 364,586. THE LUBRI-ZOL CORPORATION, Wickliffe, Ohio. Filed May 6, 1935.

SOLVENIZED

For Hydrocarbon Fuels Such as Gasoline and Chemically Treated Lubricating Compositions Such as Lubricating Oil and Grease.
Claims use since Mar. 22, 1935.

Ser. No. 364,726. THE LUBRI-ZOL CORPORATION, Wickliffe, Ohio. Filed May 9, 1935.

For Hydrocarbon Fuels Such as Gasoline and Chemically Treated Lubricating Compositions Such as Lubricating Oil and Grease.
Claims use since Apr. 24, 1935.

Ser. No. 364,793. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed May 10, 1935.

VACOMIX

For Lubricating Oil.
Claims use since Dec. 13, 1933.

CLASS 17

Tobacco Products

Ser. No. 354,547. NAJEEB NASIF MESHAKA, Boston, Mass. Filed Aug. 1, 1934.

M'LADY'S

Meshäka

For Cigarettes.
Claims use since August, 1931.

Ser. No. 365,022. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Filed May 17, 1935.

ZIPPER

For Cigarettes, Chewing Tobacco, Smoking Tobacco, and Snuff.
Claims use Mar. 5, 1931.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 364,770. EMERSON D. GROVER, Chehalis, Wash. Filed May 10, 1935.

TOUR-A-THON

For Trailers.
Claims use since Apr. 26, 1935.

Ser. No. 364,816. THE GOODYEAR TIRE & RUBBER COMPANY, Akron, Ohio. Filed May 11, 1935.

TRI-SORB

For Shock Absorbers.
Claims use since May 7, 1935.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 360,965. INDUSTRIAL PRODUCTS, Fargo, N. Dak. Filed Feb. 2, 1935.

NEOFORMER

For Converter Transformer.
Claims use since Sept. 26, 1934.

Ser. No. 361,755. WM. C. MCDUFFIE, receiver of Richfield Oil Company of California, Los Angeles, Calif. Filed Feb. 23, 1935.

RICHFIELD

For Electrical Storage Batteries.
Claims use since Feb. 13, 1935.

Ser. No. 363,648. BOND ELECTRIC CORPORATION, Jersey City, N. J. Filed Apr. 12, 1935.

DRY-CON

For Electrolytic, Electrostatic Condensers.
Claims use since Apr. 2, 1935.

Ser. No. 363,651. CONDENSER CORPORATION OF AMERICA, Jersey City, N. J. Filed Apr. 12, 1935.

ACRACON
ARMORED
"MIKE"

For Electrostatic Condensers.
Claims use since Mar. 19, 1935.

Ser. No. 363,652. CONDENSER CORPORATION OF AMERICA, Jersey City, N. J. Filed Apr. 12, 1935.

DRI-LITIC

For Electrolytic, Electrostatic Condensers.
Claims use since Mar. 19, 1935.

Ser. No. 364,746. VEGA MANUFACTURING CORPORATION, Wilmington, Del. Filed May 9, 1935.

CHROMOXIDE

For Insulated Wire and Insulating and Heat Resisting Compounds for Electrical Apparatus.
Claims use since June 1, 1932.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 360,944. THORNECRAFT, INCORPORATED, Chicago, Ill. Filed Feb. 1, 1935.

THORNECRAFT

For Toy Boats and Construction Parts Therefor.
Claims use since March, 1933.

Ser. No. 360,945. THORNECRAFT, INCORPORATED, Chicago, Ill. Filed Feb. 1, 1935.

The mark is fanciful.
For Toy Boats and Construction Parts Therefor.
Claims use since July, 1934.

Ser. No. 364,591. POLAR-WERKE A.G., Remscheid, Germany. Filed May 6, 1935.

For Ice and Roller Skates.
Claims use since 1924.

Ser. No. 364,967. NOAH'S ARK AUTO ACCESSORIES, INC., Rochester, N. Y. Filed May 15, 1935.

For Skates.
Claims use since December, 1934.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 347,358. HYDRAULIC COUPLING CORPORATION, Detroit, Mich. Filed Feb. 14, 1934.

No claim is made to the words "Fluid Transmission" and "Trade Mark" apart from the mark as shown. The representation of the goods or any part thereof is disclaimed apart from the mark shown.
For Machinery Shaft Couplings.
Claims use since Jan. 5, 1934.

Ser. No. 349,230. CROWN CORK & SEAL COMPANY, INC., Baltimore, Md. Filed Mar. 28, 1934.

CEM

For Machinery for Conveying Containers Such as Bottles and for Filling, Capping and Agitating Such Containers, and Parts of Such Machines
Claims use since Sept. 1, 1932.

Ser. No. 353,862. SUPERIOR SHEET METAL WORKS COMPANY, Indianapolis, Ind. Filed July 13, 1934

MAR VEL

For Gravity Type of Cream Separator
Claims use since 1907.

Ser. No. 358,943. OIL WELL SUPPLY COMPANY, Dallas, Tex. Filed Dec. 5, 1934.

No claim is made to the words "It's from Oilwell" and "Here's Your Guarantee" apart from the mark. The drawing is lined for orange.
For Machinery and Tools Used in the Industry of Well Drilling and the Operation of Oil and Gas Wells—Namely, Cable Tool Drilling Equipment and Fishing Tools—Namely, Rope Sockets, Jars, Drill Stems, Temper Screws, Rope Clamps, Circles, Wrenches and Sockets, Spears, Casing Bowls, Crabs, Cherry Pickers, Jar Sockets, Knockers, Latch Jacks, Devil's Pitch Forks, Rope Cutters or Knives, Swedges, Bit Hooks, Spuds, Whip Stocks, Milling Tools, Rasps, Casing Cutters, Collar Busters, Casing Splitters and Perforators; Hydraulic Rotary Drilling Equipment, and Fishing Tools—Namely, Prime Movers, Drawworks, Pumps, Crown Blocks, Travelling Blocks, Swivels, Grief Stems, Drill Bits and Rotaries, Casing Cutters, Spears, Screw Grabs, Guides, Overshots, Wall Hooks and Milling Shoes; Steam Engines; Gas Engines; Reciprocating and Centrifugal Pumps; Central Station Pumping Powers; Unit Pumping Powers; Straight and Reverse Clutches; Pipe and Tubing Elevators; Tongs; Surface and Sub-Surface Pumping Equipment; Blowers; Packers; Automatic Drilling Controls; Production Hoist; Belt Tighteners; and Casing Wagons.
Claims use since July 29, 1931.

Ser. No. 359,517. PETER J. MICHELS, New York, N. Y. Filed Dec. 20, 1934.

For Cutlery—Namely, Razors, Barber Shears, Ladies' Scissors, Tweezers.
Claims use since July 1, 1914.

Ser. No. 364,625. GORDON B. GRACE, doing business as Grace Manufacturing Co., San Francisco, Calif. Filed May 7, 1935.

The ACE

For Dishwashing Machines
Claims use since Jan. 15, 1931.

Ser. No. 364,720. GOERLICH'S, INC., Toledo, Ohio. Filed May 9, 1935.

LIFETIME

For Mufflers for Explosive Engines.
Claims use since Apr. 2, 1935.

Ser. No. 364,854. CATTARAUGUS CUTLERY COMPANY, Little Valley, N. Y. Filed May 13, 1935

HIGH BALL

For Knife
Claims use since Jan. 19, 1935.

CLASS 24

Laundry Appliances and Machines

Ser. No. 365,085. NATIONAL WASHBOARD COMPANY, Chicago, Ill. Filed May 18, 1935.

Black Beauty

For Ironing Tables.
Claims use since May 6, 1935.

Ser. No. 365,089. NATIONAL WASHBOARD COMPANY, Chicago, Ill. Filed May 18, 1935.

No. 560

For Ironing Tables.
Claims use since May 6, 1935.

Ser. No. 365,090. NATIONAL WASHBOARD COMPANY, Chicago, Ill. Filed May 18, 1935.

No. 480

For Ironing Tables.
Claims use since May 6, 1935.

CLASS 25

Locks and Safes

Ser. No. 365,213. RAILROAD ACCESSORIES CORPORATION, New York, N. Y. Filed May 21, 1935.

RACO

For Padlocks.
Claims use since Oct. 1, 1920.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 362,241. W. F. STANLEY AND COMPANY LIMITED, London, England. Filed Mar. 7, 1935.

HEZZANITH

JANS

For Arch Supports.
Claims use since February, 1934.

TRADE-MARK REGISTRATIONS RENEWED

12,393. MEDICINE FOR CERTAIN NAMED DISEASES. Registered July 7, 1885. HERMAN KNORR. Re-renewed July 7, 1935, to Emil Knorr, doing business as Knorr Medical Company, Detroit, Mich., assignee.

95,345. FERTILIZERS. Registered February 10, 1914. PATAPSCO GUANO COMPANY, Baltimore, Md. Renewed February 10, 1934, to The American Agricultural Chemical Company, New York, N. Y., a corporation of Delaware, successor.

103,206. STEEL BLOCKS AND BARS, FORGED PIECES FOR MACHINES, ARTISANS' TOOLS, CUTTING-TOOLS, AND SPRINGS. Registered March 23, 1915. PODLHÜTTE TIEGELGUSSSTAHLFABRIK, Vienna and Kladno, Austria-Hungary. Renewed March 23, 1935, to Poldihütte Aktiengesellschaft, Kladno, Czechoslovakia, a joint stock company of Czechoslovakia, assignee by mesne assignments.

104,013. BLENDED COFFEES. Registered April 27, 1915. THE CAMPBELL & WOODS COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Renewed April 27, 1935.

104,074. BREWERS' DRIED GRAINS. Registered April 27, 1915. PENN GRAINS AND FEED COMPANY. Renewed April 27, 1935, to Penn Grains and Feed Company, Philadelphia, Pa., a corporation of Pennsylvania, assignee.

104,179. WRITING-PAPER, PRINTING-PAPER, ENVELOPS, TABLETS, WRITING-CARDS, AND CARD-BOARD. Registered May 4, 1915. EATON, CRANE & PIKE COMPANY, Pittsfield, Mass. Renewed May 4, 1935, to Crane & Co., Inc., Dalton, Mass., a corporation of Massachusetts, assignee by mesne assignments.

104,381. METAL FENCING, GATES, AND FENCE-POSTS. Registered May 25, 1915. DWIGGINS WIRE FENCE COMPANY, Anderson, Ind. Renewed May 25, 1935, to Mid-States Steel & Wire Company, Crawfordsville, Ind., a corporation of Indiana, assignee.

104,461. WRITING-PAPER. Registered June 1, 1915. E. E. LLOYD PAPER CO., Chicago, Ill., a corporation of Illinois. Renewed June 1, 1935.

104,518. ILLUMINATING-GLASSWARE. Registered June 1, 1915. STEUBEN GLASS WORKS. Renewed June 1, 1935, to Corning Glass Works, Corning, N. Y., a corporation of New York, by merger.

104,708. COTTON PIECE GOODS. Registered June 15, 1915. THE CARL COMPANY, Schenectady, N. Y., a corporation of New York. Renewed June 15, 1935.

104,846. AUTOMOBILE OIL. Registered June 22, 1915. SEARS, ROEBUCK AND CO., Chicago, Ill., a corporation of New York. Renewed June 22, 1935.

105,015. CERTAIN NAMED MACHINERY AND TOOLS AND PARTS THEREOF. Registered June 29, 1915. FLINT AND WALLING MANUFACTURING CO., Kendallville, Ind., a corporation of Indiana. Renewed June 29, 1935.

105,180. SPECIFIC ACTIVATORS OF THE INTESTINAL DIGESTIVE GLANDS. Registered July 13, 1915. ARMOUR AND COMPANY, Chicago, Ill., a corporation of Illinois. Renewed July 13, 1935.

105,432. PRINTED AND DYED COTTON GOODS. Registered July 27, 1915. THE EDDYSTONE MANUFACTURING COMPANY, Eddystone and Philadelphia, Pa. Renewed July 27, 1935, to The Eddystone Manufacturing Company, Eddystone, Pa., a corporation of Pennsylvania.

105,566. NON-ALCOHOLIC CARBONATED BEVERAGES AND FRUIT ESSENCES FOR MAKING SAME. Registered August 3, 1915. STEVENSON & HOWELL, LIMITED, London, England, a corporation of Great Britain. Renewed August 3, 1935.

105,667. CERTAIN NAMED BELTING, HOSE, MACHINERY PACKING, AND TIRES. Registered August 10, 1915. MONTGOMERY WARD & CO. INC., New York and Brooklyn, N. Y.; Chicago, Ill.; Fort Worth, Tex.; Kansas City, Mo.; and Portland, Oreg. Renewed August 10, 1935, to Montgomery Ward & Co., Incorporated, Chicago, Ill., a corporation of Illinois, assignee.

105,804. EXPANSION-BOLTS, ANCHOR-BOLTS, AND TOGGLE-BOLTS. Registered August 17, 1915. NORMAN MELLOR, doing business as Ankyra Manufacturing Company, Philadelphia, Pa. Renewed August 17, 1935.

105,915. CHAINS AND PARTS OF STEEL OR OTHER BASE METALS, USED IN MACHINERY AND GENERAL PURPOSES. Registered August 24, 1915. THE JEFFERY MANUFACTURING COMPANY, Columbus, Ohio, a corporation of Ohio. Renewed August 24, 1935.

106,199. A SEDATIVE. Registered October 19, 1915. THE BAYER COMPANY, INC., New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,200. AN ANTIRHEUMATIC. Registered October 19, 1915. THE BAYER COMPANY, INC., New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,201. A PURGATIVE. Registered October 19, 1915. THE BAYER COMPANY, INC., New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,202. A SEDATIVE AND HYPNOTIC. Registered October 19, 1915. THE BAYER COMPANY, INC., New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,205. SEWING-MACHINES, VACUUM-CLEANERS, AND CARPET-SWEEPERS. Registered October 19, 1915. THE BUCKLEY, NEWHALL COMPANY, New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,206. SEWING-MACHINES, VACUUM-CLEANERS, AND CARPET-SWEEPERS. Registered October 19, 1915. THE BUCKLEY, NEWHALL COMPANY, New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,207. BABY-CARRIAGES AND GO-CARTS. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,208. BABY-CARRIAGES AND GO-CARTS. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,209. PHONOGRAPHS, TALKING - MACHINES, PIANOS, ORGANS, AND MUSIC-BOXES. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,210. PHONOGRAPHS, TALKING - MACHINES, PIANOS, ORGANS, AND MUSIC-BOXES. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,211. REFRIGERATORS. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,212. REFRIGERATORS. Registered October 19, 1915. THE BUCKLEY-NEWHALL COMPANY, New York and Brooklyn, N. Y. Renewed October 19, 1935, to The Buckley, Newhall Company, New York, N. Y., a corporation of New York.

106,285. AN ANTIGONORRHEIC AND ASTRINGENT MEDICAL SUBSTANCE. Registered October 19, 1915. THE BAYER COMPANY, INC., New York, N. Y., a corporation of New York. Renewed October 19, 1935.

106,328. SMOKELESS RIFLE-POWDER. Registered October 19, 1915. HERCULES POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Renewed October 19, 1935.

106,401. COTTON-BAGS. Registered October 19, 1915. BOOTT MILLS, Lowell, Mass., a corporation of Massachusetts. Renewed October 19, 1935.

106,410. WOOLEN PIECE GOODS. Registered October 19, 1915. THE CLEVELAND WORSTED MILLS CO., Cleveland, Ohio, a corporation of Ohio. Renewed October 19, 1935.

106,624. COFFEE. Registered October 26, 1915. C. D. KENNY CO., Baltimore, Md., a corporation of Maryland. Renewed October 26, 1935.

106,662. MATCHES. Registered October 26, 1915. THE OHIO MATCH COMPANY, Wadsworth, Ohio, a corporation of Ohio. Renewed October 26, 1935.

106,718. COTTON, WORSTED, AND MERINO YARN. Registered October 26, 1915. WILLIAM WHITMAN COMPANY, INC., Boston, Mass., a corporation of Massachusetts. Renewed October 26, 1935.

106,808. COFFEE, TEA, AND COCOA. Registered October 26, 1915. C. FRANK SMITH, Detroit, Mich. Renewed October 26, 1935.

106,810. MEASURING-RULES. Registered October 26, 1915. THE STANLEY RULE & LEVEL COMPANY. Renewed October 26, 1935, to The Stanley Works, New Britain, Conn., a corporation of Connecticut, assignee.

LABELS

REGISTERED JUNE 25, 1935

45,862.—*Title:* AMARO AMERICANO BERRETTA. For a Medicinal Preparation. GIUSEPPE BERRETTA, doing business as Laboratorio Industriale di G. Berretta, Brooklyn, N. Y. Published May 15, 1935.

45,863.—*Title:* BOHEMIAN'S CRUSHED WHEATEN BREAD. For Bread. BOHEMIAN BAKING COMPANY, Green Bay, Wis. Published April 19, 1935.

45,864.—*Title:* CARPENTER OIL-HARD MATCHED TOOL STEEL. For Matched Tool Steel. THE CARPENTER STEEL COMPANY, Reading, Pa. Published March 19, 1935.

45,865.—*Title:* CARPENTER OIL-TOUGH MATCHED TOOL STEEL. For Matched Tool Steel. THE CARPENTER STEEL COMPANY, Reading, Pa. Published March 19, 1935.

45,866.—*Title:* CARPENTER OIL-WEAR MATCHED TOOL STEEL. For Matched Tool Steel. THE CARPENTER STEEL COMPANY, Reading, Pa. Published March 19, 1935.

45,867.—*Title:* MOR-A. For Beauty Preparations. DEALERS SUPPLY COMPANY, Cleveland, Ohio. Published February 15, 1932.

45,868.—*Title:* DELCO-REMY SERVICE PARTS, HEAVY DUTY IGNITION COIL. For Coils. DELCO-REMY CORPORATION, Anderson, Ind. Published January 11, 1934.

45,869.—*Title:* DELCO-REMY SERVICE PARTS, STANDARD UNIVERSAL IGNITION COIL. For Coils. DELCO-REMY CORPORATION, Anderson, Ind. Published May 8, 1933.

45,870.—*Title:* DELCO-REMY SERVICE PARTS, SPECIAL UNIVERSAL IGNITION COIL. For Coils. DELCO-REMY CORPORATION, Anderson, Ind. Published October 20, 1933.

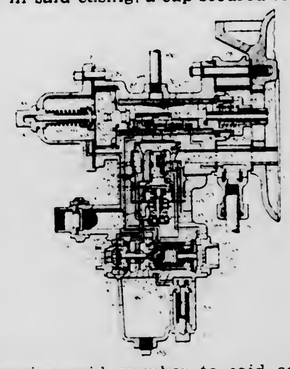
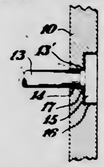
19,619
ANTISLAGGING ARRANGEMENT
Wilbur H. Armacost, New York, N. Y., assignor to The Superheater Company, New York, N. Y.
Original No. 1,983,333, dated December 4, 1934, Serial No. 596,234, March 2, 1932. Application for reissue January 26, 1935, Serial No. 3,629
9 Claims. (Cl. 122—303)

1. A boiler having a bank of generating tubes inclined to the horizontal, a plurality of rows of water tubes between which the gas flow is unimpeded, forming a group having an anti-slagging effect and spaced below said bank, and a superheater between said bank and said second mentioned tubes and so arranged that all the gases passing between said rows pass also between the tubes of the superheater, said superheater having those of its tubes adjacent its lower side arranged to produce a substantial additional anti-slagging effect whereby said superheater may receive higher temperature gases without slagging up than would otherwise be the case.



19,620
SHIRT ENVELOPE
Louis Blumenstock, Brooklyn, N. Y., assignor to Spear Box Company, New York, N. Y., a corporation of New York
Original No. 1,868,458, dated July 19, 1932, Serial No. 542,344, June 5, 1931. Application for reissue June 15, 1934, Serial No. 730,788
2 Claims. (Cl. 229—87)

1. A shirt envelope having a front portion provided with an opening adapted to clear the collar of the shirt, means adjacent the bottom of said opening for engaging the top button of the shirt for preventing relative movement of said shirt and said envelope in any direction, and means in combination with that part of the front adjacent said opening for supporting the collar in a plane at an angle to the plane of said front portion.



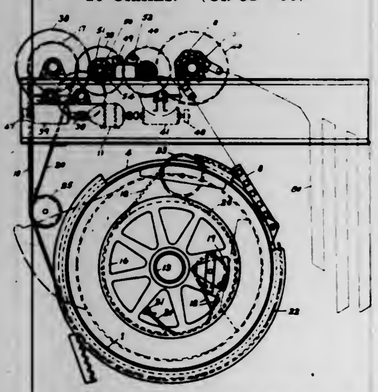
19,621
AIR BRAKE
Charles A. Campbell, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Original No. 1,928,091, dated September 26, 1933, Serial No. 517,604, February 21, 1931. Application for reissue March 22, 1934, Serial No. 716,898
49 Claims. (Cl. 303—46)

49. In a fluid pressure brake equipment, the combination with a brake pipe, a brake cylinder and means operative to locally vent fluid under pressure from the brake pipe, of a triple valve device comprising a salvaged casing having a chamber from which a quick action mechanism has been removed and which is open at one end, said casing having a brake cylinder passage through which fluid under pressure is adapted to be supplied to and released from the brake cylinder and which is open to said chamber, a member in said casing, a cap secured to said cas-

ing clamping said member to said casing and closing the open end of said chamber, said casing, member and cap defining a passage through which fluid under pressure locally vented from the brake pipe is adapted to flow, a gasket forming an air-tight seal between said casing and member, and a gasket forming an air-tight seal between said member and cap, said air-tight seals preventing leakage of fluid under pressure from one of said passages to the other.

19,622
VALVE MECHANISM
Lester M. Goldsmith, Philadelphia, Pa.
Original No. 1,777,303, dated October 7, 1930, Serial No. 279,632, May 22, 1928. Application for reissue September 28, 1932, Serial No. 635,217
3 Claims. (Cl. 251—87)

2. Valve mechanism comprising a casing having an inlet and a plurality of outlets, a finished surface within said casing, said outlets terminating at said finished surface, a movable member in said casing having a finished face engaging said finished surface and an aperture adapted to register with either or partly with two of said outlets, actuating means for said movable member having a flared portion engaging a seat in said member which permits restricted universal movement therebetween and a key portion loosely engaging a recess in said movable member, and means on the outlet side of said casing which



cooperates with the actuating means to maintain the flared portion thereof in fluid-tight engagement with its seat in said movable member.

19,623
DRUM WEIR

Bernard H. Kersting, Ben Avon, Pa., assignor to The Dravo Contracting Company, a corporation of Pennsylvania

Original No. 1,952,501, dated March 27, 1934, Serial No. 690,173, September 20, 1933. Application for reissue March 8, 1935, Serial No. 10,861

16 Claims. (Cl. 61—22)

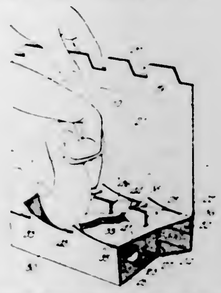
1. In a drum weir, a drum adapted to roll along a predetermined course, which drum is equipped with a flap adapted to be raised and lowered, an electric motor including a rotary element, a source of electric energy, means for alternately imposing upon the rotary element of the motor from the source of electric energy torques of predetermined values and unequal magnitude, means for applying the motor torque of greater value to the rolling of the drum, and means for applying the motor torque of less value to the swinging of the flap.

19,624
SEPARABLE FASTENER, FASTENER INSTALLATION AND METHOD OF ATTACHING THE SAME

Arthur W. Kimball, Newton Center, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Original No. 1,872,968, dated August 23, 1932, Serial No. 473,138, August 5, 1930. Application for reissue May 5, 1934, Serial No. 724,179

9 Claims. (Cl. 24—219)



1. A snap fastener installation comprising, in combination, a carrying medium, a separable fastener member located at one side of said carrying medium and having an anvil portion and an attaching element having a hollow shank provided with a closed end forced through the carrying medium and upset by said anvil portion, said anvil portion and said shank cooperating to remove the closed end of the shank and to upset the shank in the manner of an open end rivet.

19,625
COLLAPSIBLE EGG CARTON

Evelyn G. Levkoff, Brooklyn, N. Y.

Original No. 1,990,336, dated February 5, 1935, Serial No. 745,014, September 22, 1934. Application for reissue March 19, 1935, Serial No. 11,899

7 Claims. (Cl. 229—29)

5. A collapsible egg carton comprising front and rear walls, a bottom wall hinged to said front wall and rear wall and having a central longitudinal fold line, a double wall longitudinal partition hinged to said bottom wall along its line of fold, the walls of said double wall longitudinal partition being fixedly secured together, transverse partitions hinged to said front and rear walls adjacent the top thereof, all adapted to fold into substantially parallel relation with respect to one another when in collapsed position, said transverse partitions each having a slot in its inner side edge at the midportion thereof, and notches extending inwardly from the top edge of said longitudinal partition, the entrances of which are in transverse alinement with and of a width at least equal to the length of the respective unnotched midportions of said transverse partitions to permit of the free vertical sliding movement of the unnotched midportions through the entrances of the notches and inwardly thereof without flexing of said transverse partitions or the longitudinal partition during collapsing and setting up of the carton, said transverse partitions adapted to be swung to a substantially vertical position crosswise of said longitudinal partition when the carton is set up for use.

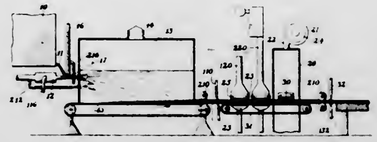
19,626
MULTIPLEX RECEIVING APPARATUS

Richard E. Mathes, Westfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Original No. 1,963,587, dated June 19, 1934, Serial No. 663,449, March 30, 1933. Application for reissue February 20, 1935, Serial No. 7,392

13 Claims. (Cl. 178—52)

1. In a communication system, the combination with a Wheatstone bridge having four branches, of an input circuit conductively connected in parallel with one of said branches, said input circuit beng arranged when functioning to change the effective impedance of said one branch, and an output circuit adapted to be connected effectively to a diagonal of said bridge.



19,627
PROCESS OF MAKING FELTED MINERAL FIBER

Edward R. Powell, Alexandria, Ind., assignor, by mesne assignments, to Johns-Manville Products Corporation, New York, N. Y., a corporation of Delaware

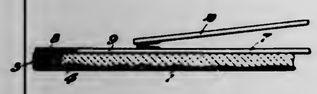
Original No. 1,899,056, dated February 28, 1933, Serial No. 301,850, August 24, 1928. Application for reissue February 27, 1935, Serial No. 8,511

23 Claims. (Cl. 154—28)

14. In a process for the manufacture of a sheet material containing mineral fibers and a binder, the improvement which consists in forming a suspension of the fibers admixed with finely divided binding material in a gaseous atmosphere, depositing the suspended admixture in successive increments on a moving support until a layer or mat

of a suitable thickness is formed having the binding material uniformly disseminated throughout the matted fibers, and subjecting the matted material to the action of a fluid medium to cool and harden the binder.

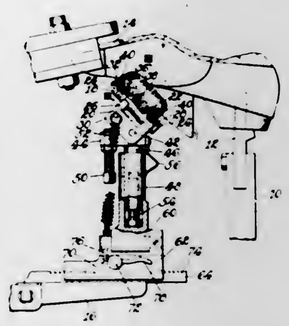
PATENTS



GRANTED JUNE 25, 1935

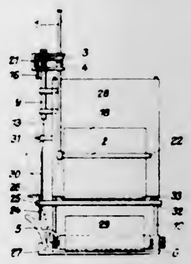
2,005,718
GRINDING
Josef Desenberg, Cologne, Germany
Application October 26, 1931, Serial No. 571,188
In Germany October 28, 1930
13 Claims. (Cl. 51—278)

1. The method of grinding and polishing a lens which is rigidly mounted on a rotary spindle and which is worked by a front side of a rigidly mounted tool, using uniform facial contact between the tool and lens, which method comprises rotating the tool and lens in such facial contact at such relative speeds and in such directions that the working point paths are short and numerous and changing systematically such of said paths as pass through or near the lens center whereby an accurate and automatic working is effected over the entire surface of the lens.



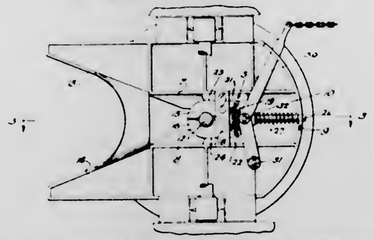
2,005,719
EMBOSSED PICTURE AND METHOD OF PRODUCING IT
Sydney Hayden, Hampstead, London, England
Application June 20, 1934, Serial No. 731,516
In Great Britain June 7, 1934
8 Claims. (Cl. 41—24)

3. An embossed picture comprising a frame, a sheet of thin metal laid against one face of the frame, a picture on said sheet, depressions and ridges formed in said sheet, a marginal extension of said sheet completely overlapping the edges of said frame and folded against the rear face of said frame, a backing substance moulded into the said frame and solidified, and a back panel secured to the said frame, the edges of the said sheet lying between said panel and said frame.



2,005,720
SHOE SUPPORT
Fred E. Hooper, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application February 12, 1932, Serial No. 592,600
27 Claims. (Cl. 12—126)

1. A device for supporting a shoe forwardly of its heel-end portion against pressure applied on its bottom face, said device comprising different sets of members arranged to support respectively the opposite side portions of the shoe against pressure applied on the shoe bottom, the members of each set being arranged in substantially contiguous relation to one another in a series ex-



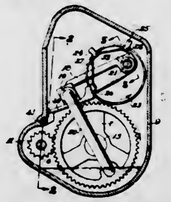
tending lengthwise of the shoe and being mounted for relative turning movements to conform substantially to the contour of the shoe.

2,005,721
LINE INDICATOR OR COPYHOLDER FOR TYPISTS
Rudolf Joksch, Vienna, Austria
Application April 16, 1934, Serial No. 720,845
In Germany April 28, 1933
5 Claims. (Cl. 120—34)

1. In a typewriter provided with a copy-holder, the sub-combination of: a rod carrying at its lower end an indicator; means for guiding said rod; a clamping lever loosely mounted upon said rod; a stop limiting the upward movement of said clamping lever upon said rod; an adjustable stop for limiting the downward movement of said clamping lever upon said rod in accordance with the required amount of feed; spring means tending to move the clamping lever in the upward direction; and means operable by the spacing lever of the typewriter for moving said clamping lever in the downward direction upon said rod, said last mentioned means comprising a resilient member, substantially as and for the purpose described.

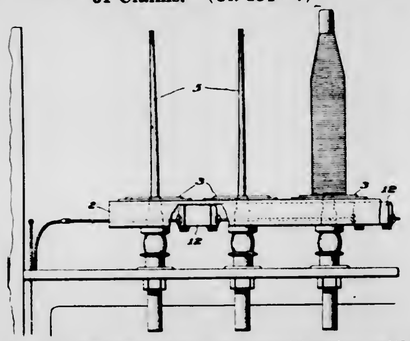
2,005,722
FIFTH WHEEL CONSTRUCTION
Henry Ketel, Muskegon, and Charles M. Harris and Hine Van Der Heuvel, Holland, Mich., assignors, by mesne assignments, to West Michigan Steel Foundry Co., Muskegon, Mich., a corporation of Michigan
Original application May 29, 1933, Serial No. 673,328. Divided and this application March 23, 1934, Serial No. 717,032
4 Claims. (Cl. 280—33.1)

2. In a lower fifth wheel member, the combination of pivoted jaw members, spring means for normally maintaining said jaw members in open position, ribs on the under side of said fifth wheel member, and a slidable yoke member adapted to engage said jaw members and said ribs to lock the jaws in closed position.



2,005,723
TOOL
Daniel A. Munn, Burlingame, Calif.
Application November 27, 1933, Serial No. 699,869
Renewed May 6, 1935
1 Claim. (Cl. 81—5.1)

A new article of manufacture comprising a pair of pliers having a rib formed integral with each jaw thereof to simultaneously engage the slot in one end and the opposite blunt end of a machine screw whose length is within the compass of said jaws, to facilitate turning of said screw, said ribs being positioned at right angles to each other whereby either rib may engage said screw slot when said slot is in a position relatively inaccessible to the opposite rib.

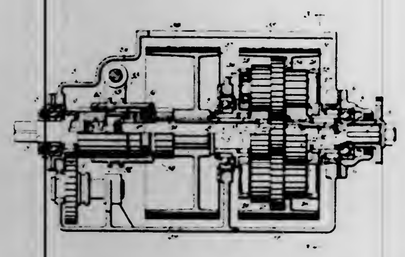


2,005,724
LUBRICATING MECHANISM
John S. Baker, Evansville, Wis.
Application November 21, 1932, Serial No. 643,550
21 Claims. (Cl. 184—4)

1. In a mechanism for converting rotary motion of a driving member into reciprocatory motion of a driven member, the combination of a casing having recesses therein through which said members project and providing a sump at its lower end for containing lubricating fluid, an elongated rocker above the level of liquid in said casing, bearing supports on opposite sides of said rocker at one end thereof supporting the latter for vertical movement of its free end about a horizontal axis and above and below horizontal position, an elongated upwardly opening groove on the rocker disposed generally longitudinally of and adjacent said axis and having opposite ends communicating with the surfaces of said supports and disposed closer to said axis than the intermediate portion of the groove, the opposite end portions of said groove having bottom surfaces which slope toward said supports when said rocker is disposed above horizontal position, means operable as an incident to rotation of said

driving member to convey fluid upwardly from said sump and discharge the same downwardly into said groove, and a ledge intermediate the ends of the groove for entrapping fluid in each end thereof in the upward movement of said rockers.

2,005,725
SPINNING AND TWISTER FRAME
Frederic E. Banfield, Jr., and Gerry B. Nutting, Saco, Maine, and Warren O. Wright, Freeport, N. Y., assignors to Auto Research Corporation, a corporation of Delaware
Application July 1, 1931, Serial No. 548,140
31 Claims. (Cl. 184—7)

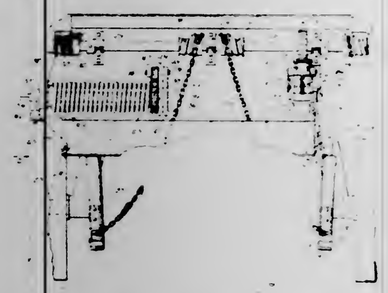


1. In a twister frame, the combination with a ring rail and a series of rings mounted on said rail, of means for delivering oil to all of said rings and distributing said oil substantially uniformly to the individual rings, said means including a conduit running along one side of the rail adjacent the lower edge thereof and a plurality of junction flow regulating devices, each having a pair of parallel vertical sockets, enclosing flow metering devices, connected to said conduit and extending upwardly to feed said rings.

2,005,726
PLANETARY TRANSMISSION MECHANISM
Oscar H. Banker, Chicago, Ill., assignor to New Products Corporation, Chicago, Ill., a corporation of Illinois
Application June 29, 1933, Serial No. 678,122
1 Claim. (Cl. 74—271)

In a change speed gear mechanism, the combination of a drive shaft, a pair of transmission drive shafts, a driven shaft, change speed planetary gearing between said transmission shafts and said driven shaft including sun gears on each of said shafts, a planetary gear carrier and planet gears on said carrier meshing with said sun gears,

a brake drum connected to said carrier, a brake band engageable with said drum for holding said carrier against movement in low and second speed drive, a lever provided with a cam for applying said band, a brake drum on one of said transmission drive shafts, a brake band engageable



with said last named drum for holding said shaft against movement in reverse, a lever provided with a cam for applying said last named band, a single lever operatively connected to and controlling both of said bands independently and clutch mechanism for selectively connecting said drive shafts with said transmission.

2,005,727

CONTROLLING MECHANISM FOR VEHICLE DUMP DOORS

James D. Benbow and De Mar A. Palmer, Aurora, Ill., assignors, by mesne assignments, to Western-Austin Company, Aurora, Ill., a corporation of Illinois

Application November 10, 1930, Serial No. 494,562
Renewed November 17, 1933
35 Claims. (Cl. 298—35)

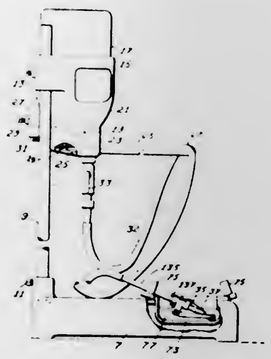
1. In a load carrying vehicle, the combination with a bed and a dumping door closing the bottom of said bed, of a rotatable member, means connecting said member and said door whereby said member is rotated in one direction upon dumping movement of said door and in the opposite direction upon movement of said door to closed position, means for returning said door to closed position comprising a swinging member, a coil spring having one end thereof operatively associated with said swinging member, the other end of said spring being associated with a collar, said swinging member and collar being supported on said bed independently of said rotatable member, means for varying the initial tension of said spring, and means for controlling the rotation of said rotatable member in either direction.

2,005,728

AMPHIBIAN

Walter K. Burgess, Chanute Field, Rantoul, Ill.

Application October 14, 1932, Serial No. 637,775
5 Claims. (Cl. 244—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An amphibian plane comprising a unit boat hull and airplane fuselage structure having a propeller gap at the waist of the structure opening upwardly and laterally from adjacent the water line of the boat hull to the top of the airplane fuselage, the latter being thereby separated into fore-and-aft fuselage sections, a wing attached to the top of the fuselage forward section, an empennage at the rear of the fuselage aft section, and an engine-propeller unit mounted between the fore-and-aft fuselage sections with the engine substantially housed within the upper rear portion of the forward fuselage section and the propeller disposed in the said propeller gap with its axis of rotation at the upper end of the gap and its disk area extending outwardly of the gap and substantially beyond the top and sides of the fore-and-aft fuselage sections.

2,005,729

LIQUID-APPLYING APPARATUS

Thomas J. Doyle, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application December 15, 1931, Serial No. 581,194
5 Claims. (Cl. 91—39)

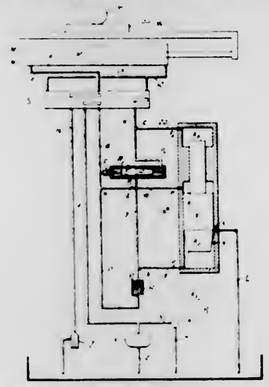
1. An apparatus for applying liquid having in combination a receptacle for liquid, a tube leading from said receptacle, a nozzle leading from said tube, a member adjustably mounted upon the nozzle, a brush holding member, and interengaging friction means formed on said members for attaching them to each other whereby said members may be separated from one another by merely pulling them apart.

2,005,730

CASEIN PRODUCTS AND PROCESS OF MAKING

Henry V. Dunham, Bainbridge, N. Y.

No Drawing. Application November 28, 1932, Serial No. 644,752
13 Claims. (Cl. 260—9)



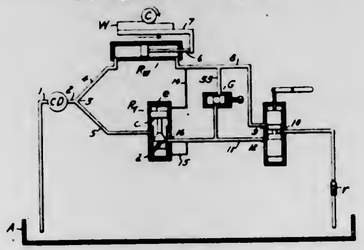
1. As a product, an extruded composition of casein and a chemical capable of increasing the solubility of casein in water, in a dry comminuted condition soluble in water.

2,005,731

VISCOSITY COMPENSATING SYSTEM

Hans Ernst and Charles W. McK. Goodrich, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio

Application June 16, 1930, Serial No. 461,569
15 Claims. (Cl. 60—52)



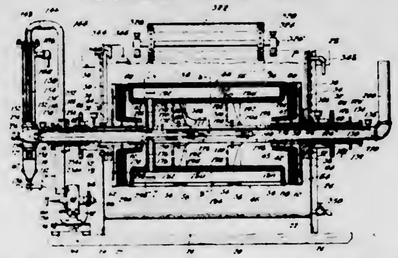
1. An hydraulic system combining a motor; a constant-displacement pump; a conduit therebetween; a throttle in said conduit; an out-let valve located in said conduit between the pump and throttle; and means for automatically regulating said valve to maintain a volumetrically-constant discharge therethrough at a rate determined by the adjustment of said throttle.

2,005,732

BALANCED PRESSURE HYDRAULIC CIRCUIT

Hans Ernst and Bernard Sassen, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio

Application October 21, 1930, Serial No. 490,154
14 Claims. (Cl. 60—52)



1. An hydraulic system combining a volumetrically-constant source of oil; a main-conduit leading therefrom; an hydraulic-motor in said main-conduit; a shunt-conduit; throttle means connecting the conduits with said source for apportioning the flow through said main-conduit and said shunt-conduit and means in said shunt-conduit to impose a resistance to the flow therein to maintain the oil in each conduit under substantially equal pressures at the down stream side of said throttle means.

2,005,733

HEAT EXCHANGE APPARATUS

Crosby Field, Brooklyn, N. Y., assignor, by mesne assignments, to Flakice Corporation, Wilmington, Del., a corporation of Delaware

Application July 14, 1928, Serial No. 292,631
Renewed January 11, 1933
96 Claims. (Cl. 62—105)

5. Apparatus of the character described, comprising in combination, a rotary cylinder of thin flexible material, deflecting means for said cylinder operable between a first position in which no deflection of the cylinder is produced and a second position in which the cylinder is deflected from its normal configuration, and means for controlling the operation of said deflecting means.

2,005,734

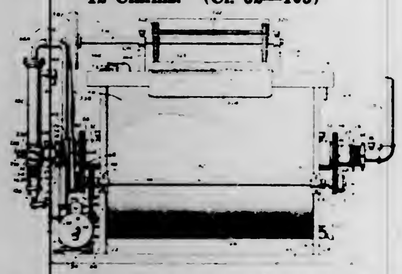
HEAT EXCHANGE APPARATUS

Crosby Field, Brooklyn, N. Y., assignor to Flakice Corporation, Wilmington, Del., a corporation of Delaware

Application August 14, 1931, Serial No. 557,108
37 Claims. (Cl. 62—106)

1. Apparatus of the character described comprising in combination, a rotatable flexible freezing cylinder, a drum within the cylinder fixed against rotation and having contact with portions of the inner surface of the cylinder to maintain substantially the normal curvature of the cylinder at said points, means to apply a refrigerating medium to the inner surface of the cylinder to freeze a liquid applied to its outer surface, means to apply a liquid to the outer surface of the cylinder at points where its normal curvature is substantially maintained, and means to deflect the cylinder at another point to cause the frozen liquid to peel therefrom at said latter point.

24. A method of freezing liquids which consists in supplying a freezable liquid to an endless flexible deformable freezing surface, applying a refrigerating medium to predetermined spaced pe-



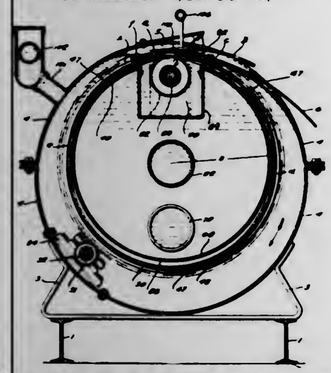
ripheral areas of said freezing surface to remove heat from such spaced areas to cause said freezable liquid to freeze on said spaced areas, and deflecting said freezing surface to remove the frozen liquid therefrom.

2,005,735
ICE

Crosby Field, Brooklyn, N. Y., assignor, by mesne assignments, to Flakice Corporation, Wilmington, Del., a corporation of Delaware

Original application July 14, 1928, Serial No. 292,631. Divided and this application July 11, 1933, Serial No. 679,864. In Canada July 9, 1929

12 Claims. (Cl. 62—105)



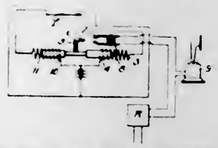
1. A product of manufacture comprising substantially symmetrical sheets of ice, each sheet being curved, relatively large in area and thin in depth, relatively elongated and of substantially constant width throughout its length whereby each sheet tends, upon first being fractured, to break into fragments which are larger and of more nearly uniform size and shape than fragments formed under the same or similar conditions from non-symmetrical and/or smaller sheets.

2,005,736
ICE

Crosby Field, Brooklyn, N. Y., assignor to Flakice Corporation, Wilmington, Del., a corporation of Delaware

Original application August 14, 1931, Serial No. 557,108. Divided and this application September 12, 1934, Serial No. 743,893

11 Claims. (Cl. 62—1)



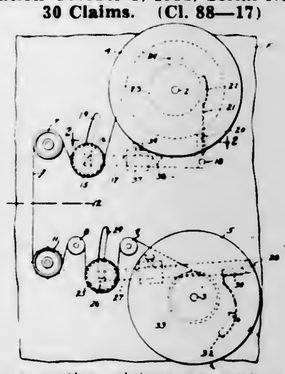
1. As a product of manufacture, pieces of ice, each piece having a first surface curved about at least one axis and having a predetermined radius, and a second surface opposite said first named surface curved about a plurality of axes, whereby the surfaces of one piece piled with other pieces will contact with surfaces of the other pieces over a minimum area.

2,005,737
FILM HANDLING AND SOUND REPRODUCING APPARATUS

Warren Dunham Foster, Washington Township, Bergen County, N. J., and Earle L. Parmelee, Pittsburgh, Pa., assignors, by direct and mesne assignments, to Kinatome Patents Corporation, New York, N. Y., a corporation of New York

Application April 30, 1929, Serial No. 359,346

12 Claims. (Cl. 88—16.2)



9. In combination, an image bearing film arranged with a plurality of predeterminedly positioned control elements carried by each side edge portion of the film, means for projecting pictures from said film, said means including a film guiding structure, an electric sound producing means, a circuit for said sound means, an operable switch in said circuit, means actuated by the passage of one of said control elements on one side of said film past said guiding structure for closing said switch and rendering said sound producing means effective, and means actuated a predetermined period of time thereafter by the passage of one of said control elements on the other side of said film past said guiding structure for opening said switch and rendering said sound producing means ineffective so that a predetermined period of projection of pictures from said film is in silence, the end of said silent period being determined by the passage of a control element on the first named side edge of said film past said guiding structure.

2,005,738
APPARATUS FOR FEEDING MATERIAL

Warren Dunham Foster, Washington Township, Bergen County, N. J., assignor to Kinatome Patents Corporation, a corporation of New York

Application October 5, 1931, Serial No. 567,109

30 Claims. (Cl. 88—17)

13. In a motion picture apparatus, an idling delivery carrier, an intermittently driven feeding member for drawing film from said delivery carrier, means for driving said feeding member at motion picture rate, a roller characterized by substantial weight bodily supported upon the film between said delivery carrier and said feeding member, and means for maintaining said roller in substantially fixed position longitudinally of the film while allowing movement in angular relation thereto, said roller being so disposed in relation to said carrier and said feeding member that each feeding impulse of said intermittent member raises said roller thereby cushioning the pull of said feeding member upon the film and that during each period of inactivity of said intermittent member said roller upon its downward gravitational movement draws film from said delivery carrier, thereby maintaining said delivery carrier under continuous movement and maintaining the film under continuous tension between said intermittent feeding member and said delivery carrier.

2,005,739
BROOM ATTACHMENT

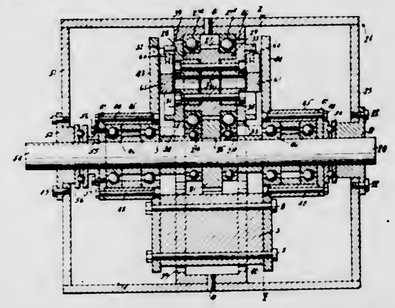
Herbert A. Gardner, United States Army, San Francisco, Calif.

Application August 16, 1933, Serial No. 685,388

6 Claims. (Cl. 15—247)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A broom attachment adapted to secure a covering over a broom head comprising a flexible stamped metal band having a roughened surface adapted to prevent vertical displacement of the attachment on the broom head, a plurality of openings in one end of said band and a tongue at the other end of the band adapted to engage one of said openings and firmly and permanently secure the band around a broom head, pairs of perforated ears struck from the band, serrated portions struck from the stock of the band beneath said ears and adapted to form the inner jaws of clips, spring pressed outer jaw members having pairs of perforated ears and serrated lower ends, pivotally mounted on said ears struck from the band and adapted to form the outer jaws of said clips, and secure the cover over the broom head.



2,005,740
POWER TRANSMISSION DEVICE

Albert T. Harris, New York, N. Y., assignor, by mesne assignments, to A. T. Harris Holding Corporation, a corporation of New York

Application February 19, 1934, Serial No. 711,902

12 Claims. (Cl. 74—305)

1. A power transmitting device comprising a power shaft, a unit driven by the power shaft, the said unit including a sun gear on the power shaft, a central floating planetary gear arranged in mesh with the sun gear, end planetary gears carried by the central planetary gear, a stationary ring gear in mesh with the end planetary gears, rotatable plates, power take-off means in operative engagement with the said end planetary gears at a portion of each of said end gears that is offset from the planet axes of said end gears, said power take off means being in operative engagement with said rotatable plates, and a delivery shaft operatively coupled to the said rotatable plate.

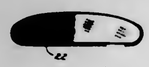
2,005,741
MAGNETO-STRICTIVE SOUND GENERATOR

Harvey C. Hayes, Washington, D. C.

Application December 15, 1932, Serial No. 647,382

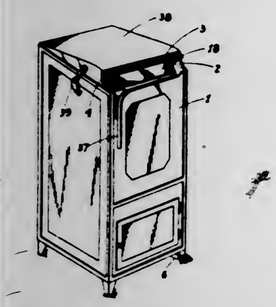
20 Claims. (Cl. 177—352)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device of the class described, a hollow magneto-strictive sound-generating and receiving cylinder, positioning means non-rigidly connected to each end of said cylinder, a plurality of coils disposed around said cylinder in substantially toroidal form, each coil passing over a portion of the exterior surface of the cylinder and also over the inner face of the same longitudinal element of the cylinder wall the said coils being of a width between one-fourth wave length and one-half wave length of the sound emitted by said cylinder as measured in the transmitting medium, the distance between any two adjacent coils being substantially equal to the width of a coil, all of said coils being connected together to give an additive magnetic effect, a sound-reflecting cone disposed within said cylinder, said cone having an apical angle of 90° and an altitude equal to the length of said cylinder, and a frusto-conical sound-reflecting member disposed around said cylinder, said frusto-conical member having an altitude equal to the length of said cylinder and a maximum diameter equal to twice the diameter of the said cylinder plus two half wave lengths of the sound in said medium and being spaced from said cylinder at any point a distance one-half wave length greater than the distance of a corresponding point on the inner cone from the cylinder at the same altitude.

2,005,742
PROCESS FOR DEINKING IMPRINTED PAPER
Pierre R. Hines, Portland, Oreg.
No Drawing. Continuation of application Serial No. 625,269, July 27, 1932. This application May 25, 1934, Serial No. 727,577
11 Claims. (Cl. 92—9)



1. The process of de-inking paper which comprises refining and cooking the stock, with a chemical adapted to free substantially the ink particles from the pulp fiber, until tests show the stock to be defiberized and the fiber substantially freed from ink particles, effecting flocculation of the ink particles, and dispersion of other constituents by an agency selected relatively to the pH value of the stock, effecting frothing and collecting by a suitable agent, and removing the ink particles by froth flotation method.

2,005,743
PARACHUTE PACK
Edward L. Hoffman, Dayton, Ohio
Application April 13, 1933, Serial No. 665,973
12 Claims. (Cl. 244—21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

10. In a pack containing a parachute, a readily removable stiffener frame disposed within said pack adapted for maintaining said pack substantially flat when said parachute is folded therein.

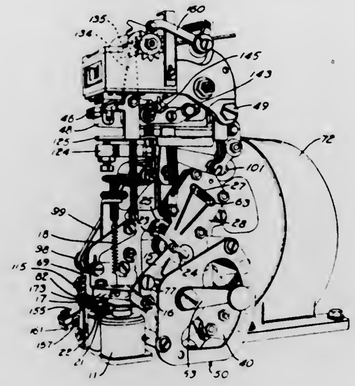
2,005,744
TOWEL CABINET
August L. Hondeville, Merced, Calif., assignor to Serv-A-Towel Manufacturing Company, San Francisco, Calif.
Application October 23, 1933, Serial No. 694,749
19 Claims. (Cl. 312—37)

19. A towel servidor comprising a cabinet having a towel dispensing opening, a normally closed cover for the opening, a towel support in the cabinet movable between two positions, means on the support to hold a stack of towels in such relation to each other that successive towels can only be withdrawn through the opening when the support is moved from one position to the other, means to open the cover, means to thus move the support, and manual means to operate the cover opening means and the support moving means in successive order.

2,005,745
AUTOMOBILE CONTROL DEVICE
Harry E. Hull, Washington, D. C.
Application June 29, 1932, Serial No. 620,006
19 Claims. (Cl. 192—3)

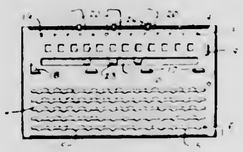
1. In combination with an automobile having a foot brake pedal and a pedal with operative connections for an instrumentality concerned in the onward movement of the car, said two pedals being situated for operative contact with the foot of the driver without shifting of the foot in any direction in the plane of the foot-contacting surfaces of the pedals and means operatively connected with the brake pedal that render motion of the other pedal along with the brake pedal ineffective on the device normally actuated by said other pedal.

2,005,746
REMOVAL OF WOOL FROM ANIMAL SKINS
Wolf Kritchevsky, Chicago, Ill.
No Drawing. Application May 7, 1934, Serial No. 724,392
11 Claims. (Cl. 92—10)



1. The method of recovering wool from dyed animal skin, which includes the step of boiling the skin in a dilute solution of a mineral acid to which non-ferrous metal in finely divided form has been added.

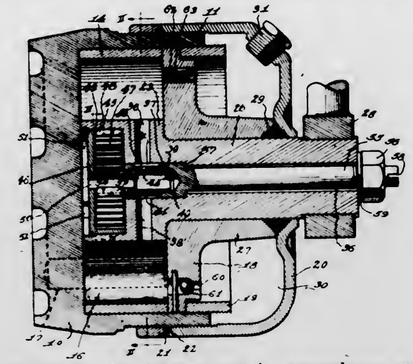
2,005,747
REMOVAL OF WOOL FROM ANIMAL SKINS
Wolf Kritchevsky, Chicago, Ill.
No Drawing. Application December 3, 1934, Serial No. 755,773
12 Claims. (Cl. 92—10)



1. The method of recovering wool from dyed animal skin, which includes the step of boiling the skin in a dilute solution of phosphoric ac d.

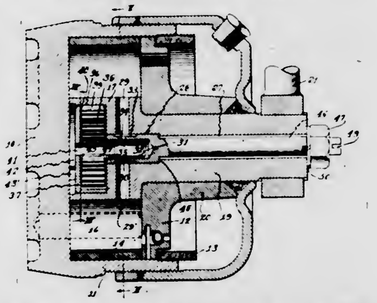
2,005,748
TAPE PERFORATOR
Edward Stanley Larson, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware
Application July 1, 1933, Serial No. 678,587
15 Claims. (Cl. 178—92)

1. In a tape perforator, a perforating mechanism including a plurality of punches, a selecting device responsive to code signals for controlling the operation of said mechanism comprising selectable elements having no normal position, means for advancing a tape for each operation of said mechanism, and means effective independently of said selecting device and without altering the setting of the selectable elements for perforating single perforations and causing the advancement of the tape upon a cessation of code signals.



2,005,749
INDEX TAB
Henry C. Osborn, Cleveland, Ohio, assignor to Multigraph Company, Wilmington, Del., a corporation of Delaware
Application December 14, 1931, Serial No. 580,796
17 Claims. (Cl. 129—16.8)

3. The combination with a plate to be indexed having an offset portion with a plurality of openings through it, and an index tab having a central tongue in the same plane as the body of the tab and adapted to removably occupy any of said openings, whereby the tab may be readily interchangeable among them, and means for holding the tab in a plurality of positions while the tongue is in the same opening.

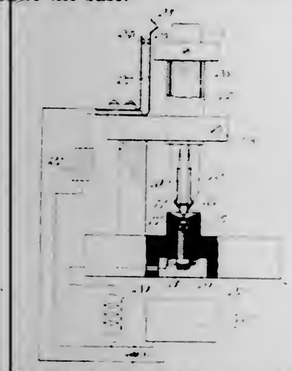


2,005,750
HYDRAULIC SHOCK ABSORBER
Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application April 29, 1933, Serial No. 668,532
13 Claims. (Cl. 188—89)

1. In a hydraulic shock absorber comprising a housing having a space for containing resistance fluid, a piston structure operable within said space against the resistance flow of the fluid, a bypass from one side of the piston structure to the other, a valve seat frame having a port interposed in said bypass, a valve movable on said valve seat frame and having a port for cooperating with said frame port to control the flow of fluid through the bypass, means for manually adjusting said seat frame for setting of its port relative to the valve port, and a thermostat connected with the valve to automatically set its port

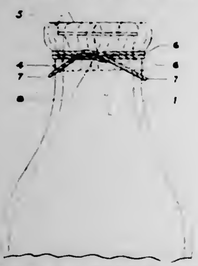
relative to the frame port in accordance with the changes in temperature of the fluid.

2,005,751
THERMOSTATIC VALVE STRUCTURE FOR HYDRAULIC SHOCK ABSORBERS
Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Original application April 29, 1933, Serial No. 668,532. Divided and this application November 18, 1933, Serial No. 698,631
8 Claims. (Cl. 188—100)



1. A valve structure for hydraulic shock absorbers comprising a housing having a bypass therethrough for the flow of the resistance fluid of a shock absorber, said housing having an axial bore intersecting said bypass, a rotary valve seated in said bore and having a port, said bore being enlarged at one end to form a cylindrical pocket, and a spiral thermostat element in said pocket connected to rotate said valve for setting of its port in said bypass in accordance with change in temperature of the resistance fluid flowing through said bypass.

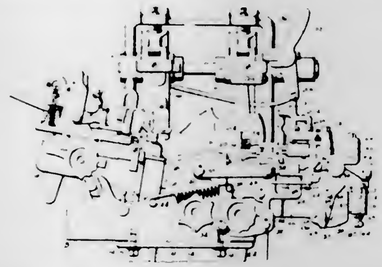
2,005,752
METHOD OF PREPARING PEN-POINTS
Carl Pfanstiehl, Highland Park, Ill., assignor to Pfanstiehl Chemical Co., a corporation of Illinois
Application January 13, 1934, Serial No. 706,565
29 Claims. (Cl. 219—10)



4. The method of tipping a metallic base which comprises tacking a metallic tip to the base by passing a sudden large electric discharge between

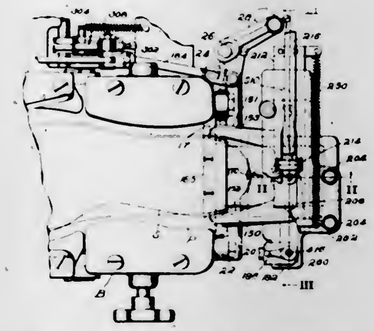
the base and tip while lightly contacting them, said discharge being only sufficient to fuse a small area of the contacting metals, and then fusing metal adjacent to the tack by heat supplied substantially entirely through the tip, whereby the tip is welded to the base.

29. Apparatus for tacking a metallic tip to a metallic base which comprises means for moving said tip and base into light contact, means for producing an electric discharge between base and tip as they come into proximity, and an inductance in the discharge circuit for prolonging the discharge to maintain contact between base and tip during progressive fusion.



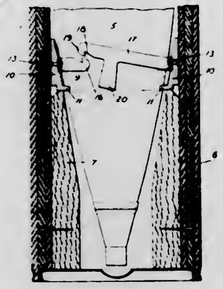
2,005,753
BOTTLE CLOSURE
Joseph H. Ramsey, Albany, N. Y.
Application December 27, 1933, Serial No. 704,156
13 Claims. (Cl. 215—84)

1. In combination, a skirted hood cap adapted to be placed over the mouth portion of a bottle, loops of twine in the form of a clove hitch positioned upon and around the skirt of the cap, and a gummy material applied to the twine at the clove hitch so as to secure the loops in assembled position on the skirt of the cap.



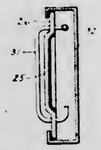
2,005,754
APPARATUS FOR USE IN APPLYING PRESSURE TO SHOE BOTTOMS
Robert N. Sandberg, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 26, 1934, Serial No. 727,769
39 Claims. (Cl. 12—33)

26. A pad for use in applying pressure to shoe bottoms and provided with a pair of gage fingers for positioning an end portion of a sole relatively to the pad, said fingers being fulcrumed for rocking movement about parallel axes alined with each other transversely of the pad and extending heightwise of a shoe on the pad, said fingers being provided with means for limiting rocking movement of the fingers to equal but opposite movement about their fulcrums, a slide movable transversely of the pad in the vicinity of the fulcrums of the gage fingers, one of said fingers having a projection cooperating with a cam surface of the slide whereby movement of the slide transversely of the pad will rock the fingers



toward or from operative position, a second pair of gage fingers for positioning an end portion of a shoe relatively to the sole on the pad, said last-named fingers being fulcrumed for rocking movement about axes parallel to and adjacent to the fulcrums of the sole-engaging fingers, means limiting rocking movement of the shoe-engaging fingers to equal but opposite movement about their fulcrums, and means for rocking the shoe-engaging fingers into and out of operative position.

2,005,755
MECHANISM FOR USE IN APPLYING PRESSURE TO SHOE BOTTOMS
Francis J. Better, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application August 2, 1933, Serial No. 683,353
Renewed October 24, 1934
13 Claims. (Cl. 12—33)



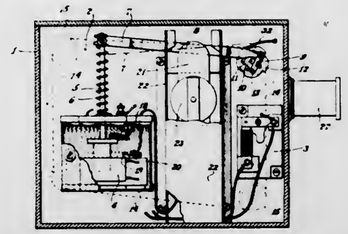
1. A pad box for use in applying pressure to shoe bottoms provided with a sole receiving pad, a bracket mounted on the pad box and arranged for adjustment heightwise of the pad, a slide secured to said bracket and adjustable lengthwise of the pad, and sole and shoe positioning gages carried by said slide and constructed and arranged to position a sole and shoe relatively to each other on the pad.

2,005,756
MEANS FOR PACKING A ROUND OF AMMUNITION
Arthur B. Schilling, Rockaway, and Cornelius Casey, Dover, N. J.
Application January 11, 1935, Serial No. 1,320
4 Claims. (Cl. 206—3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a container having a seat, a round of ammunition having recesses and adapted to be inserted in the container, a pair of blocks each having a lip engaging in one of the recesses in the round, a resilient band connecting the blocks and having a hooked end, a resilient latch carried by one of the blocks and having a hooked end adapted to engage the hooked end of the band when the band and latch encircle the round and a projecting finger on the latch adapted to engage the seat of the container to unhook the latch.

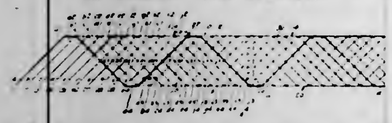
2,005,757
DISPLAY SIGN
John Scott, St. George, Staten Island, N. Y.
Application August 8, 1933, Serial No. 684,253
12 Claims. (Cl. 40—130)

5. In a sign, character visible from within a selected field and tubular illuminating means superimposed upon and generally conforming to the strokes of said characters, said characters being formed of clear glass roughened and mirrored on the inner side so as to form reflecting surfaces characterized by innumerable small irregularities and to diffusely reflect light impinged thereon.



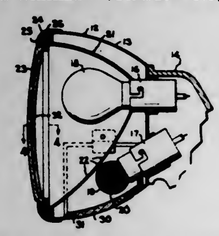
8. In a sign, characters visible from within a selected field and tubular illuminating means superimposed upon and generally conforming to the strokes of said characters, said characters consisting of bodies of transparent glass of convexo-concave form with the inner faces thereof roughened and coated with a light-reflecting opaque material to form mirrored surfaces adapted to diffusely reflect light impinged thereon.

2,005,758
CRUSHER
Elmer C. Shiley, Mount Union, Pa., assignor to J. William Wetter, Philipsburg, Pa., receiver for Rockhill Coal & Iron Company, Robertsdale, Pa., a corporation of Pennsylvania
Application August 20, 1932, Serial No. 629,684
2 Claims. (Cl. 83—52)



1. Apparatus for breaking coal and the like, the said apparatus comprising a roller, a mounting for the said roller, the said roller being mounted for free rotation, a conveyor for feeding coal under the roller, the said conveyor having a straight line movement in one direction under the said roller, and having a charging end portion and a discharge end portion, and the length of the roller being substantially co-extensive with the width of the conveyor; teeth spaced apart in a direction transversely of the conveyor and carried solely by the said roller substantially radially thereof, the said roller having gravitational movement towards the conveyor, stop means to limit the gravitational movement of the roller so that it always will be spaced apart from the surface of the conveyor a distance greater than the length of the teeth on the roller, the said roller being rotated solely by the pressure of the conveyed material thereon and on its teeth, whereby the teeth on the roller adjacent the conveyor move in the same direction with the conveyor, said gravitational roller automatically receding from the conveyor upon excess volume of material on the conveyor encountering the same, substantially as described.

2,005,759
AUTOMATIC PROJECTOR
Charles E. Slaughter, Montclair, N. J.
Application May 4, 1931, Serial No. 534,819
1 Claim. (Cl. 88—28)



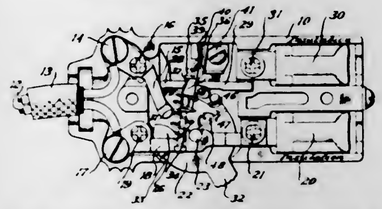
In a projecting machine wherein a transparency is intermittently advanced through a step by step movement intermediate a projecting lens and a source of illumination, a pawl and ratchet mechanism for intermittently advancing the transparency, an electromagnet, an armature movable by said electromagnet to actuate said pawl and ratchet mechanism, an electrical circuit in which the electromagnet is located, a second electrical circuit connected to said first circuit and in parallel therewith and including said source of illumination, a normally open switch in said second circuit operable by the movements of the said armature to close said second circuit, and a thermostatic flasher in series with said circuits.

2,005,760
SELVAGED UNWOVEN ZIGZAG FABRIC
Raymond J. Southwell and Theodore H. Wickwire, Jr., New York, N. Y.
Application August 12, 1933, Serial No. 684,800
12 Claims. (Cl. 189—82)

1. As a new article of manufacture, zig-zag, unwoven sheet fabric which is of diamond mesh formation, except at the edges where the mesh formation is substantially triangular, and having substantially continuous straight selvage edges, said fabric consisting of a single set of continuous laterally spaced strands laid to an edge of the sheet, there having selvage-forming portions disposed for a distance longitudinally along such edge, thence laid or folded inwardly to the opposite edge, and there disposed along the edge of the sheet and thence laid or folded back in the same way as disposed and laid or folded at and from the first edge, with each successive lay or fold at the same face of and overlapping substantially half the area of the preceding lay or fold, and said fabric and selvage being made self-sustaining and strong by the strands having the meeting surfaces thereof directly secured together at points of crossing and of selvage portion overlaps.

2,005,761
COMBINATION BACK-UP AND TAIL LIGHT
George Speeg, Hartwell, Ohio
Application November 20, 1933, Serial No. 698,793
2 Claims. (Cl. 240—8.3)

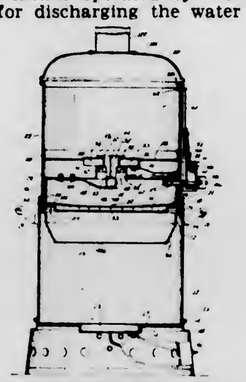
2. A tail light comprising a housing, a pair of lamp receiving sockets in said housing, lamps in said sockets, a reflector for one of said lamps extending over the other lamp, perforations in said reflector adjacent to said last named lamp, and a lens secured to the face of said housing being provided with vertical prisms having one face of each prism coated with a red pigment and the other face of said prisms projecting the rays of light in a horizontal angular direction.



2,005,762
DISPENSING UNIT
Arthur Richard Weissflog, Pittsburgh, Pa.
Application October 24, 1933, Serial No. 695,045
1 Claim. (Cl. 15—135)

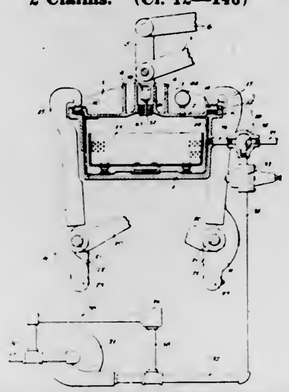
A dispensing unit comprising a body, a wall integral with the body and dividing the latter into recesses and provided with a conical-shaped opening, a flexible tube integral with the wall about said opening and extending outwardly of the body by way of one of said recesses, bristles mounted to the body about said tube, said other recess having a restricted portion, a fitting mounted in said last-named recess and extending outwardly of the latter by way of the restricted portion and adapted for connection to a neck of

a collapsible tube, said fitting having a passage therethrough, and a hollow conical-shaped portion integral with the fitting about the passage and having seated engagement with the walls of the conical-shaped opening.



2,005,763
AUTOMATIC THERMOSTATIC SWITCH PLUG
Albert C. Wilcox, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application July 20, 1932, Serial No. 623,561
2 Claims. (Cl. 200—138)

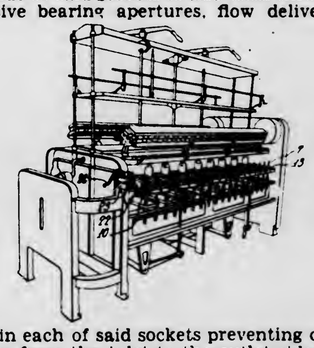
1. An automatic thermostatic switch including a spaced pair of contacts, a rotatable segment, a switch member carried by said segment and arranged to simultaneously contact with both of said contacts, a spring associated with the segment and arranged to normally urge the segment in a direction to move the switch member away from said contacts, a locking lug upon the segment having a recess therein, a bimetal member, and a lock stud upon the bimetal member arranged to engage said locking lug to hold the switch member in engagement with said contacts and arranged to be received in said recess in the locking lug when the segment is rotated to a position to move the switch member away from said contacts.



2,005,764
AUTOMATIC ELECTRIC DRIP COFFEE URN
Albert C. Wilcox, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application April 10, 1934, Serial No. 719,912
9 Claims. (Cl. 219—43)

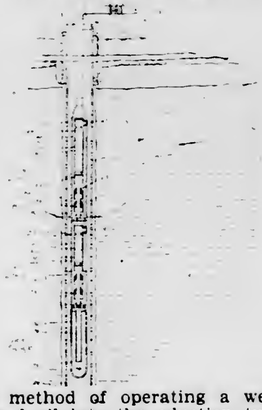
1. An automatic electric drip coffee urn including a water container, a coffee basket beneath said water container, a coffee beverage receptacle beneath the coffee basket, means for heating water in the water container, means for heating beverage in the beverage receptacle, means operated by the boiling of the water in the water container for automatically cutting out said first named heating means and simultaneously turning on said second named heating means, and means operated by the boiling of the water for discharging the water from the

water container through the coffee basket and into the beverage receptacle.



2,005,765
METHOD OF TEMPERING LEATHER SOLES
Wallace C. Wright, Brookfield, N. H., assignor to American Shoe Machinery Corporation, Boston, Mass., a corporation of Massachusetts
Application March 29, 1933, Serial No. 663,368
2 Claims. (Cl. 12—146)

1. The improved method of moistening leather soles preparatory to incorporating said soles into shoes during the processes of shoe manufacture, which consists in immersing said soles in a moistening liquid contained within a liquid-tight receptacle, and thereupon subjecting said liquid to a hydraulic pressure for a desired length of time.

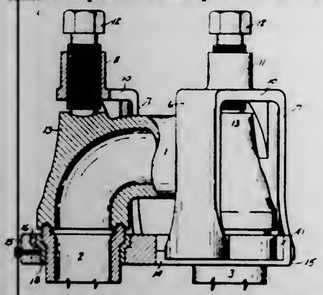


2,005,766
LUBRICATION
Warren O. Wright, Freeport, N. Y., assignor to Auto Research Corporation, Wilmington, Del., a corporation of Delaware
Application May 29, 1931, Serial No. 540,899
24 Claims. (Cl. 184—7)

1. A lubricating installation for a machine of the type involving an elongated structural member having a multiplicity of closely associated bearing apertures therethrough, each supporting a movable bearing element, each bearing requiring an occasional small supply of lubricant; said installation comprising a main feed conduit longitudinal of and substantially rigid with said structural member and in protected position in respect thereto, a socket bored in said member adjacent each aperture, branch conduits from said main conduit to one side of said sockets and from the other side of said sockets to and then through the respective bearing apertures, flow delivery ele-

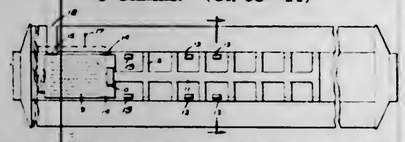
ments in each of said sockets preventing communication from the inlet to the outlet sides of the sockets except through the elements, a lubricant inlet for said main conduit, and means for maintaining said main and branch conduits substantially filled with lubricant during the intervals between lubricating operations.

2,005,767
METHOD AND APPARATUS FOR OPERATING OIL WELLS
John A. Zublin, Bel Air, Calif.
Application May 7, 1934, Serial No. 724,381
31 Claims. (Cl. 166—21)



4. The method of operating a well flowing gas-charged oil into the eduction tube thereof that includes directing such oil against a moving element to thereby disintegrate it to release gas contained therein, separating within the well at least a portion of the gas so released, discharging such gas into the well external the eduction tube, and delivering the oil to the ground surface.

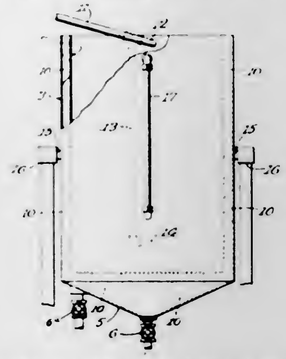
2,005,768
RETURN BEND FITTING FOR OIL STILLS
Charles E. Ard, Birmingham, Ala., assignor to Fred C. Fantz, Webster Groves, Mo.
Application January 25, 1933, Serial No. 653,395
Renewed December 7, 1934
2 Claims. (Cl. 285—20)



1. In a refinery apparatus, a conventional return bend adapted to connect a pair of still tubes

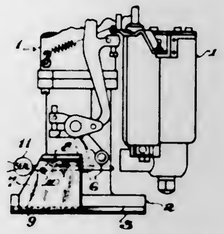
to provide a passageway therethrough, the ends of said tubes being upset to form external shoulders, a housing therefor, comprising a pair of inverted U shaped members, the side walls of which terminate in inwardly extending lugs, the upper surface of which inclines upwardly and inwardly set screws which abut said return bend mounted in the upper part of said inverted U, a plate having annular portions adapted to encircle the

ends of said tubes, internal shoulders formed in said annular portions, sectional metal bushings adapted to be mounted intermediate said annular portions and said tubes to abut said shoulders, there being bayonet slots in said annular portions adapted to receive said inwardly extending lugs, the upper walls of said slots being fitted to and coinciding with the said inwardly extending lugs, means to prevent the rotation of said U's in said slots beyond a predetermined point.



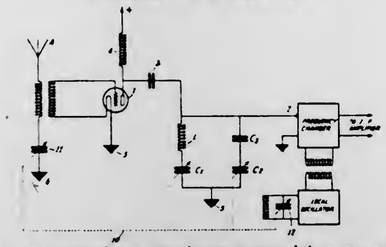
2,005,769
SYSTEM FOR AIR CONDITIONING RAILROAD CARS
Herman Richard Arf, Elizabeth, N. J., assignor, by mesne assignments, to Carrier Engineering Corporation, Newark, N. J., a corporation of New York
Application November 29, 1929, Serial No. 410,360
5 Claims. (Cl. 98—14)

1. In an air conditioning system for a railroad car having a monitor top and crowned shoulder portions, a plenum space extending substantially the length of the car, said plenum space being formed between a false ceiling and the roof of said car, said ceiling extending across the car from one crowned shoulder to the other air conditioning apparatus, a conduit wholly within said plenum for supplying conditioned air from said apparatus to a plurality of air outlets in said false ceiling, the remainder of said plenum serving as a passageway for returning air from the car to said conditioning apparatus.



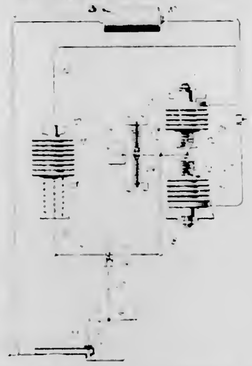
2,005,770
HOP EXTRACTOR
Daniel C. Bleser, Manitowoc, Wis.
Application May 23, 1932, Serial No. 613,007
1 Claim. (Cl. 87—28)

In a hop extractor, the combination of an axially elongated, vertical, substantially cylindrical strainer provided with a substantially flat strainer bottom member, a receptacle for receiving said strainer, said receptacle having an inverted conical bottom closure and the latter being provided with a centrally disposed, valved outlet opening and with a valved outlet opening adjacent the side wall of the receptacle, means for maintaining the strainer member in spaced relation to the receptacle wall and bottom, and means for tangentially delivering hop-containing wort to the inside of the strainer adjacent the upper end thereof so as to cause the hop-containing wort to flow horizontally



and downwardly over the side wall of said strainer, whereby the liquid content of the hop-containing wort is separated from the solid content thereof by centrifugal force incident to the delivery of the hop-containing wort, the liquid being adapted to be drained from the receptacle through said last mentioned outlet opening, and fine particles of solid material which pass through said strainer and collect in the central portion of said receptacle bottom are adapted to be removed therefrom through said centrally disposed outlet.

2,005,771
DEVICE FOR CONTROLLING THE SPEED OF INTERNAL COMBUSTION ENGINES
Clyde W. Bull, Dallas, Tex.
Application October 17, 1932, Serial No. 638,192
1 Claim. (Cl. 251—153)



A device for controlling the speed of an internal combustion engine including a base plate having a central opening therein and adapted to be received between the carburetor and the intake manifold of said engine, an upwardly and outwardly extending projection integral with said base plate, said upwardly and outwardly extending projection terminating in a horizontally extending portion adapted to prevent opening of the throttle beyond a predetermined position, said latter portion being arranged to lie in a plane parallel with said base, said upwardly extending portion having an aperture to receive a sealing means.

2,005,772
HETERODYNE RECEIVER
Henri Chireix, Paris, France, assignor to Compagnie Generale de Telegraphie Sans Fil, a corporation of France
Application December 26, 1931, Serial No. 583,346
In France January 24, 1931
7 Claims. (Cl. 250—20)

1. A heterodyne receiever comprising an oscillation circuit for collecting signal frequencies, a frequency changer, an oscillation circuit, between the collecting circuit and the changer, including a reactive couple consisting of a coil and a variable condenser resonant to an undesired signal image frequency, said second oscillation circuit additionally including a second variable condenser and a fixed condenser both in shunt with said couple, said second condenser being adapted to resonate the entire second oscillation circuit to a desired signal frequency.

2,005,773
APPARATUS FOR INDICATING OR CONTROLLING PHYSICAL CHANGES
Luis de Florez, Pomfret, Conn.
Original application October 19, 1927, Serial No. 227,345. Divided and this application February 7, 1931, Serial No. 514,165. Renewed February 5, 1934
12 Claims. (Cl. 236—1)

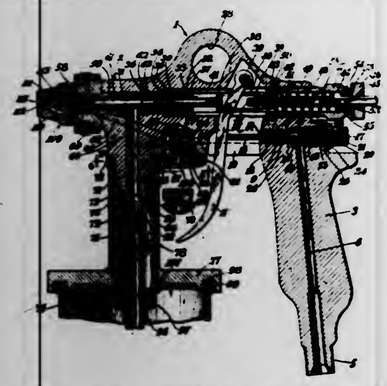
1. An apparatus for controlling changes of temperature or pressure in a controlled system by means of responsive pressure changes in an adjacent system, which comprises in combination a first mechanical device, a connection between said first mechanical device and said adjacent system whereby said first mechanical device responds fully and immediately to a change of pressure within said adjacent system, a second mechanical device, a connection between said second mechanical device and said adjacent system whereby the initial response of said second device to the said change is full and immediate, a mechanical device, a third connection between said third mechanical device and said adjacent system, said third mechanical device being so related to said second device that the full response of one neutralizes the full response of the other, means for delaying the full response of the said third device to said change in said adjacent system, and control devices operated joinly by said mechanical devices.

2,005,774
PRODUCTION OF BENZOIC ACID AND BENZOATES
Jules Emile Demant, Cuise Lamotte, France, assignor to Bozel-Malétra Société Industrielle de Produits Chimiques, Cuise Lamotte, France, a corporation of France
No Drawing. Application August 31, 1932, Serial No. 631,125. In Germany June 23, 1932
12 Claims. (Cl. 260—108)

1. A process for the production of benzoic acid and benzoates by the oxidation of toluene with impure salts of chromic acid, which contain the impurities originating from the chromiferous raw materials, in the presence of water at temperatures above 100° C. and under superatmospheric pressure.

2. A process as claimed in claim 1, wherein the impure chromates are chromate frits.

2,005,775
HEEL ATTACHING PLATE
Frank B. Dopp, St. Louis, Mo., assignor to Perma Corporation, a corporation of Illinois
Application September 21, 1933, Serial No. 690,306
9 Claims. (Cl. 36—34)

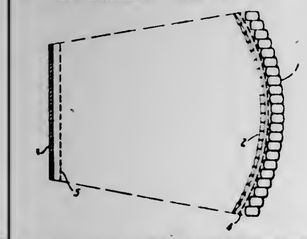


1. In combination with a shoe heel attaching plate structure having a pair of apertured lock pin engaging ears, adapted to be permanently secured to the heel seat of a shoe sole by opposed pairs of fastening prongs, of bevel faces on the prongs, the front pair of prongs having their front edges at the juncture thereof with the plate disposed in a plane with the front face of one of the apertured lock pin engaging ears.

2,005,776
DEVICE FOR SPRAYING PAINTS, LACQUERS, AND OTHER LIQUIDS
Austin H. Downs, Newark, N. J., assignor to Eclipse Air Brush Company, Inc., Newark, N. J., a corporation of New Jersey
Application October 30, 1930, Serial No. 492,126
12 Claims. (Cl. 299—89)

4. In a device of the character described, a body portion having a barrel provided with fluid and liquid conduits, said body portion being provided with a threaded aperture interposed in said fluid conduit, a pressure liquid cup or container adapted to communicate with said liquid conduit, a lid or cover for said cup or container, said lid or cover being provided with a sleeve portion having an apertured lateral extension, the sleeve portion and the lateral extension being provided with means for conducting fluid under pressure to said cup or container, and a

slotted screw member threaded into said threaded aperture and adapted to form part of a con-



duit for conducting pressure from said threaded aperture to said cup or container.

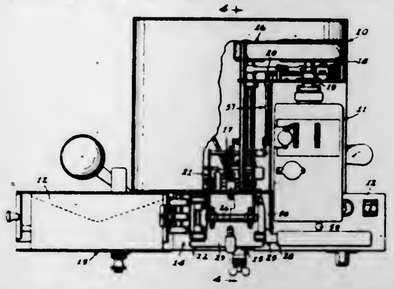
2,005,777

STEREOSCOPIC PHOTOGRAPHY AND OBJECTIVE SYSTEM THEREFOR

Ernest E. Draper, Scarsdale, N. Y., assignor to The Perser Corporation, New York, N. Y., a corporation of New York

Application August 8, 1930, Serial No. 473,929
14 Claims. (Cl. 95—5)

1. The method of making a stereoscopic picture, comprising making a single exposure of a stationary sensitized plate, through a multiplicity of lenses mounted in an arc of a circle, said exposure being made through a screen composed of alternate opaque and transparent vertical lines, a corresponding number of prisms arranged directly behind the lenses and intermediate the lenses and the line screen to superimpose the multiple images on said plate exactly upon all the images from all the lenses, except where they differ on account of the angle of view.



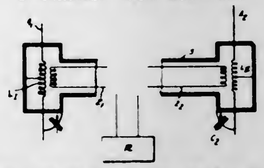
2,005,778

MANUAL FEEDING AND TRIPPING MECHANISM FOR A POWER DRIVEN POSTAL MACHINE

John Q. Finfrock, Westwood, Calif., assignor to National Postal Meter Company, Los Angeles, Calif., a corporation of California

Application August 24, 1934, Serial No. 741,235
14 Claims. (Cl. 101—287)

1. In a postage printing machine, postage printing means, driving means operable for driving the printing means through a single operating cycle each time said driving means is placed into operation, conveyor means for advancing mail matter through the printing means, means for manually advancing the conveyor, and means for placing the printer driving means into opera-



tion with each actuation of the conveyor actuating means.

2,005,779

DIRECTIVE AERIAL SYSTEM

Albrecht Gothe, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application June 22, 1932, Serial No. 618,621
In Germany June 29, 1931
3 Claims. (Cl. 250—11)

1. A short wave antenna system including a vertical antenna, a horizontal conductor unsymmetrically coupled thereto, and means for preventing the horizontal component of an electrical wave from setting up current in said antenna comprising a shield for said horizontal conductor and a variable condenser connected between said shield and said vertical antenna for balancing any unbalanced capacitive coupling between said antenna and said conductor by way of said shield.

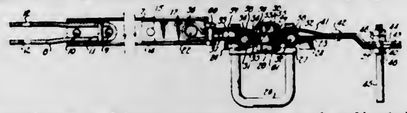
2,005,780

MATERIAL FOR PROVIDING METAL WITH A PAINT RECEPTIVE SURFACE

James H. Gravell, Elkins Park, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

No Drawing. Application May 23, 1932, Serial No. 613,131
8 Claims. (Cl. 148—6)

1. A composition of materials of the class described for use in providing metal with a surface adapted to receive a coat of paint or the like, said composition including mono-calcium phosphate, an ionizing solvent, and clay characterized by the ability of 100 cc. of a water suspension thereof having twice the viscosity of water to form a plastic solid upon the addition of 12 cc. of furfural substantially as herein described.



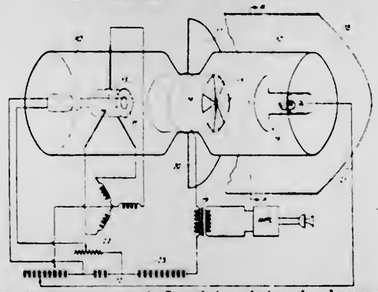
2,005,781

TRAILER HITCH

Joseph E. Hagstrom, Kansas City, Mo.

Application September 4, 1931, Serial No. 561,156
5 Claims. (Cl. 280—33.44)

5. In a towing hitch, a tongue having a hinge pin at one end thereof; a turn-table including a base member, and a rotatable member of sheet metal rotatably mounted on said base member and bent at one end around said hinge pin to



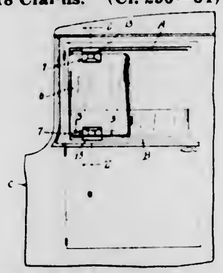
constitute a hinge connection; and adjustable means for forcing the bent-around end of said plate into closer engagement with the hinge pin to take up looseness or wear.

2,005,782

FREQUENCY MULTIPLIER FOR ULTRA HIGH FREQUENCIES

Clarence W. Hansell, Port Jefferson, Long Island, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application November 3, 1932, Serial No. 641,020
12 Claims. (Cl. 250—36)



12. A system as defined in claim 4, characterized in this, that said deflecting electrodes are substantially located on a circle and surround said cathode.

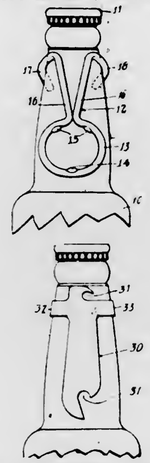
2,005,783

MOUNTING FOR WIND DEFLECTORS OR THE LIKE

Leo M. Harvey, Los Angeles, Calif.

Application January 27, 1931, Serial No. 511,529
18 Claims. (Cl. 296—84)

1. A mounting for a wind deflector or the like comprising attaching members securable to supports, holders securable to a wind deflecting member, and means including universal joints connecting the holders with the attaching members, said means including resilient members.



2,005,784

BOTTLE CAP REMOVER

Leo M. Harvey, Los Angeles, Calif.

Application April 6, 1934, Serial No. 719,353
7 Claims. (Cl. 65—46)

4. A bottle cap removing device formed of a single piece of metal, having means for yieldingly gripping onto the neck portion of a bottle for attachment thereto and a portion adapted to lie closely adjacent to and longitudinally of the bottle neck when not in use, and a cap engaging

means formed on said device operable when the device is removed from the bottle for lifting the cap, all portions of said device being located below the cap when attached to the bottle neck.

2,005,785

TREATMENT OF FILAMENTS, THREADS, YARNS, AND THE LIKE

Harold Maximilian Hibbert and Robert Pierce Roberts, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application February 23, 1933, Serial No. 658,140. In Great Britain March 11, 1932
12 Claims. (Cl. 28—1)

1. Method of treating textile filaments, threads, yarns and the like, comprising applying thereto an oil or fat obtained by hydrogenating an unsaturated fat or fatty oil.

2,005,786

STABILIZED CITRUS BEVERAGE AND SIRUP

Ralph H. Higby, Ontario, Calif., assignor to California Fruit Growers Exchange, Los Angeles, Calif., a corporation of California

No Drawing. Continuation of application Serial No. 438,902, March 25, 1930. This application March 19, 1934, Serial No. 716,336
18 Claims. (Cl. 99—11)

1. A citrus beverage containing a quinoid compound in amounts sufficient to inhibit the fading of natural and added color present in the beverage but insufficient to impart an undesirable taste to the beverage.

2,005,787

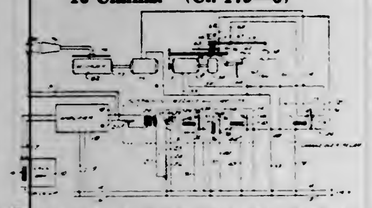
BALL STENCIL

Walter E. Humphrey, Jeannette, Pa., assignor to Pennsylvania Rubber Company, a corporation of Pennsylvania

Application November 5, 1934, Serial No. 751,446
8 Claims. (Cl. 101—114)

1. The herein described method which comprises securing a compressible ball in "wedged" position within an equatorial, perforated stencil

band, supporting the ball compressively between two heads at opposite poles remote from such equatorially applied band, applying decorating



material to the exposed surfaces of said ball, and removing the decorated ball from between said heads and from within said band.

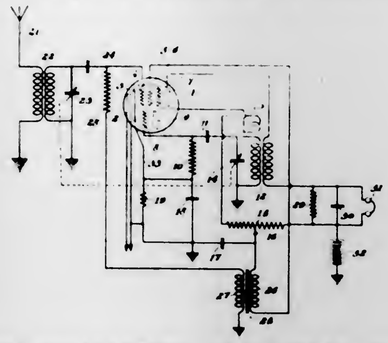
2,005,788

AUTOMATIC TELEPHONE MESSAGE RECEIVER AND RECORDER

Morris Keiser, New York, N. Y., assignor to Hixon-Keiser Patents Corporation, New York, N. Y., a corporation of New York

Application February 18, 1933, Serial No. 657,414
16 Claims. (Cl. 179—6)

16. In apparatus of the class described, an amplifier having its input coupled to a telephone line, a translating device connected to the output of said amplifier, a recorder associated with said translating device, a speaking record, a motor for actuating said speaking record, a second motor for actuating said recorder, a motor circuit for each of said motors, sustaining relays and circuits therefor actuated by current output from said amplifier, a change-over relay including an actuating electro-magnet, the circuits controlled by said change-over relay being supplied with power upon energization of the sustaining relays, said change-over relay normally closing the first motor circuit and opening said first motor circuit and closing the second motor circuit upon energization of said magnet, means actuated by the first motor to close a circuit through said magnet upon completion of the operation of the speaking record, circuit means closed by the energization of said relay magnet and arranged to maintain energization of the magnet during energization of the sustaining relays, electro-magnetic means controlled by one of said sustaining relays and arranged to lift a telephone instrument to establish its talking circuit, a reproducer box and needle movable to bring the needle into and out of engagement with the speaking record, and electro-magnetic means in parallel with the first motor and arranged to cause engagement of the needle and record upon energization of said first motor and to cause lifting of the needle out of said engagement upon opening of the circuit for the first motor.



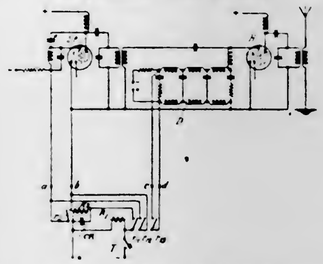
2,005,789

ONE TUBE RADIORECEIVER

Winfield R. Koch, Camden, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application January 27, 1934, Serial No. 708,539
8 Claims. (Cl. 250—20)

1. In a radio receiver, a pentode-triode tube, means including the pentode-electrodes of said tube for amplifying radio-frequency signals, means including a tuned circuit to which the radio frequency output from the pentode electrodes of said tube is coupled for impressing signals to be detected upon the triode electrodes of said tube, an output circuit for said triode electrodes regeneratively coupled to said tuned circuit, a potentiometer in said output circuit, an audio frequency transformer the primary of



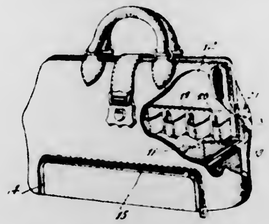
which connects between one end of said potentiometer and a variable tap intermediate thereof while the secondary of said transformer connects through a suitable radio frequency impedance with the input electrode of the pentode portion of said tube, and means including said variable tap for controlling both the amount of regeneration and the volume of the signals passed through said audio frequency transformer.

2,005,790

HIGH FREQUENCY TELEGRAPH TRANSMITTER

Ernst Kramar, Berlin-Tempelhof, and Erich Lüttcher, Berlin-Friedrichsfelde, Germany, assignors to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany, a company of Germany

Application March 18, 1932, Serial No. 599,738
In Germany March 31, 1931
2 Claims. (Cl. 250—8)



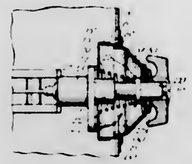
1. In a high frequency telegraph transmitter, the combination of a transmitter circuit with a controlling oscillator circuit, a key for producing marking and spacing signals, means responsive to each operation of said key to marking positions for switching on said oscillator before cutting in the transmitter circuit and to each operation of said key to spacing position for switching off the oscillator after cutting out the transmitter circuit, said means including relays, and a damping circuit disposed between one of said relays and said transmitter circuit.

2,005,791

HAND BAG

Gustave Kruse, Newark, N. J.

Application July 7, 1934, Serial No. 734,099
2 Claims. (Cl. 206—12)



1. In a hand bag, a false bottom dividing the bag into an upper compartment and a lower compartment, one of the side walls of the bag being provided with an opening in alignment with the lower compartment and substantially co-extensive with the length thereof, a U-shaped metallic frame secured to the material of the wall of the bag adjacent said opening to reinforce the bag and define said opening, and a flap connected to the bag and adapted to close said opening, the free end of said flap and the said frame carrying cooperative latching elements to enable the flap to be latched to close the compartment opening, and means in the lower compartment arranged for holding surgical instruments and the like in a manner that will enable the instantaneous removal thereof through the compartment opening.

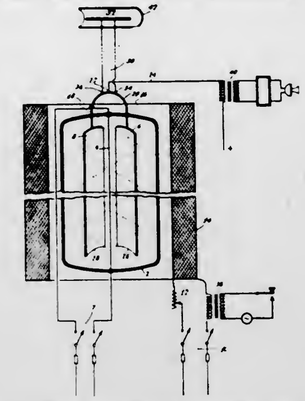
2,005,792

BEZEL MOUNTING

Oscar J. Leins, Milwaukee, Wis., assignor to Milwaukee Gas Specialty Company, Milwaukee, Wis., a corporation of Wisconsin

Application March 18, 1932, Serial No. 599,691
14 Claims. (Cl. 126—39)

9. In an oven, a heat regulator, an exterior oven wall having an opening adapted to receive a projecting portion of said heat regulator, and a mounting member surrounding said projecting portion and having floating engagement within said opening, said member having a radially extending flange bearing against the outer surface of said wall.



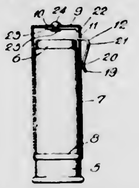
2,005,793

OSCILLATION GENERATION

Nils E. Lindenblad, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application July 21, 1930, Serial No. 469,364
12 Claims. (Cl. 250—17)

1. In an electron discharge device, a cathode, and an elongated anode a plurality of half wave lengths long at the operating frequency sectionalized into elongated sections, the sections of the anode being relatively close to increase mutual inductance and means for producing standing



waves on said elongated sections out of phase with respect to each other.

2,005,794

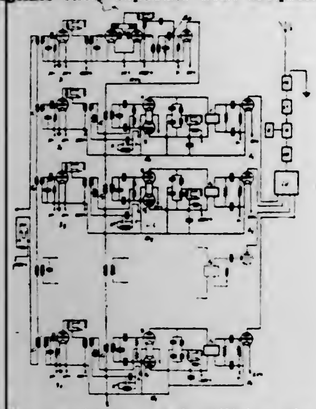
LIP STICK CASE

Clinton E. Marshall, New York, N. Y.

Application July 27, 1934, Serial No. 737,169
5 Claims. (Cl. 24—11)

1. A clip for elongated tubular caps of the class described, the end wall of the cap having an aperture and the side wall a narrow opening disposed adjacent said end wall, the clip comprising an elongated metallic strip, one end portion of which is fashioned to form a spring clip disposed outwardly of the wall of said cap, and the other end portion being passed through the opening in the side wall of the cap and bent a number of times to form a part arranged upon the inner surface of the closed end wall of said cap and a part adjacent the inner surface of the side wall of the cap, and means passed through the aperture in the end wall of the cap and engaging that part of the strip adjacent said end wall for retaining the clip against displacement from the cap.

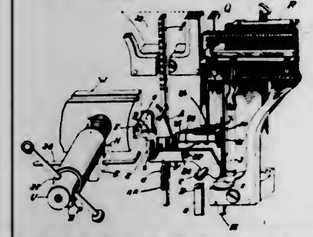
2,005,795



HIGH FREQUENCY MULTIPLEX SIGNALING SYSTEM

Gaston Adelin Mathieu and Owen Standidge Puckle, London, England, assignors to Radio Corporation of America, a corporation of Delaware

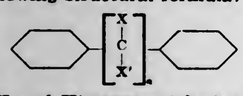
Application April 21, 1931, Serial No. 531,676
In Great Britain April 29, 1930
10 Claims. (Cl. 250—9)



5. Signaling means comprising a master time period device, a plurality of frequency multipliers coupled in series with the output terminals of said device, means for beating one of the multiplied frequencies with each of the other multiplied frequencies separately to produce separate beat notes of different frequency, means for si-

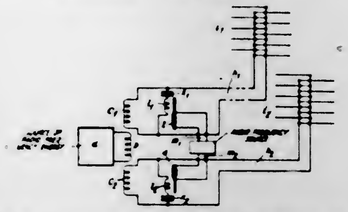
multaneously modulating in accordance with desired signals each separate beat frequency, and

means for combining and utilizing the signal modulated beat frequencies.



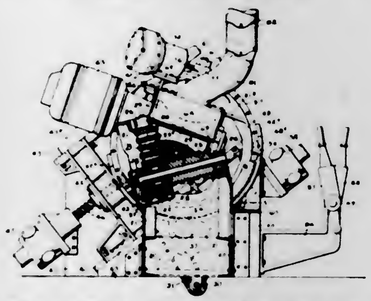
2,005,796
AUTOMATIC LINER SAFETY
B. A. Mills, Shreveport, La.
Application August 21, 1933, Serial No. 686,119
4 Claims. (Cl. 199—52)

4. In an automatic liner safety device, adapted to be attached to the assembler elevator gib, vise jaw plate screw, vise locking screws, mold turning pinion and dial lever; an angle bar, containing a key at its upper end and an adjustable lug secured adjustably to its lower end, operatively connected with an ejector locating lever, interchangeable supporting bracket and the intermediate latch lever mechanism, adapted to withdraw an intermediate latch lever from obstructing position when its lower end is engaged by the downward movement of the ejector locating lever.



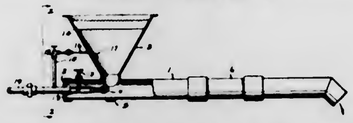
2,005,797
INSECTICIDE COMPOSITION
William Moore, Chappaqua, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 15, 1931, Serial No. 557,387
3 Claims. (Cl. 167—30)

1. An insecticidal composition comprising a solution in an organic solvent of a compound having the following structural formula:



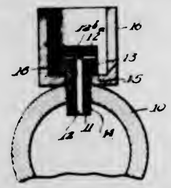
in which X and X' represent hydrogen or alkyl groups and n represents a whole number.

2,005,798
DIRECTIONAL APPARATUS
Wilhelm Moser, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application May 31, 1930, Serial No. 457,830
In Germany August 31, 1929
2 Claims. (Cl. 250—11)



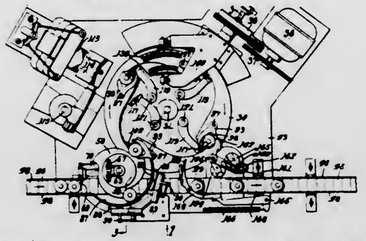
1. In a directive transmission system a plurality of directive aerial systems, a feed circuit including a reactance connected with each of said aerial systems, a single high frequency generator, means for inductively coupling said generator to all of said feed circuits simultaneously, and means for detuning said feed circuits successively at an audible frequency rate including, variable reactances connected in parallel with each of said first named reactances, and a source of audio frequency oscillations coupled to said parallel reactances to vary the same successively.

2,005,799
APPARATUS FOR REMOVING BARK FROM LOGS
Frederick A. Nicholson and Wilmot T. Pritchard, Seattle, Wash., assignors to Stetson-Ross Machine Company, a corporation of Washington
Application August 7, 1933, Serial No. 684,036
9 Claims. (Cl. 144—208)



2. In a machine of the class described, the combination with means for supporting and longitudinally moving a log section, of a cutter-head having a concave surface, a rotatable annular member with which said cutter-head is connected, a diagonally-movable support on which said cutter-head is rotatably mounted, means for adjusting said support to move said cutter-head toward or away from the log section to be operated upon, means for rotating said annular member to cause said cutter-head to be bodily moved in a plane at right angles to the path of travel of the log section to bring said cutter-head into operative engagement with a side portion of said section, and other means for adjusting the cutter-head to conform approximately to the curved surface of said log section.

2,005,800
MIXING APPARATUS
Thomas O'Boyle, Cleveland, Tex., assignor of one-half to Hugh Wright, Houston, Tex.
Application July 14, 1934, Serial No. 735,295
1 Claim. (Cl. 259—4)



Mixing apparatus comprising a tubular container closed at one end and having an outlet, a hopper arranged to deliver material into the container, a water line entering the container and terminating in the container underneath and adjacent the hopper and having an opening inside of the container, a valve accessible from the outside of the container and arranged to control the opening to regulate the flow of water through said water line and opening a valve controlled nozzle pipe leading from said water line and terminating in a nozzle in the hopper and a mixing device incorporated into the container between the hopper and outlet through which the mixture in the container is forced on its way to said outlet.

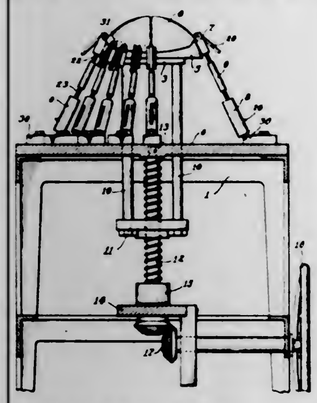
2,005,801
BURNER FOR VARIOUS GASES
Ove M. Olsen, Rockford, Ill., assignor to Garnet W. McKee, Rockford, Ill.
Application August 17, 1931, Serial No. 557,501
4 Claims. (Cl. 158—116)

1. A gaseous fuel burner of the character described comprising in combination a cup-shaped member overlying a fuel supply manifold and consisting of a continuous side wall and a bottom wall forming with the side wall a combustion chamber with an open top, and a vertically extending nozzle embodying an enlarged head disposed in the lower part of the combustion chamber and spaced inwardly and centrally with respect to the side wall of the cup-shaped member, and a shank of reduced diameter formed integrally with, and extending downwardly from the lower end of, the head and projecting into a hole in the manifold, said nozzle having a central bore of uniform diameter extending longitudinally through the shank and into the head to a point beneath the upper end of said head and forming a vertical duct for receiving fuel from the manifold, and also having a plurality of transverse ducts extending radially from the upper end of the bore and outwardly through the side portions of the head and serving to jet streams of fuel outwardly against the side wall of the cup-shaped member for passage to the upper part of the combustion chamber, said transverse ducts being of greater total cross sectional area than the vertical duct so that the velocity of the fuel is reduced before jetting of the fuel against the side wall of the cup-shaped member.

2,005,802
LABELING MACHINE
Walter W. Oslund, Holden, Mass., assignor to The Oslund Brothers Machine Company, Incorporated, Holden, Mass., a corporation of Massachusetts
Original application February 6, 1933, Serial No. 655,401. Divided and this application June 16, 1933, Serial No. 676,066
5 Claims. (Cl. 216—59)

1. A labeling machine comprising a rotary table arranged to support articles during the labeling operation, a plurality of vertical shafts extending through the table and rotatably supported therein, mechanism located beneath the table and arranged to oscillate the shafts relative to the table as the table rotates, and label grippers located above the table and actuated by the shafts.

2,005,803
TOY FISHING OUTFIT
Jesse Kenneth Reel, Cantril, Iowa, assignor of one-half to John N. Calhoun, Keosauqua, Iowa
Application May 22, 1934, Serial No. 727,005
1 Claim. (Cl. 46—37)



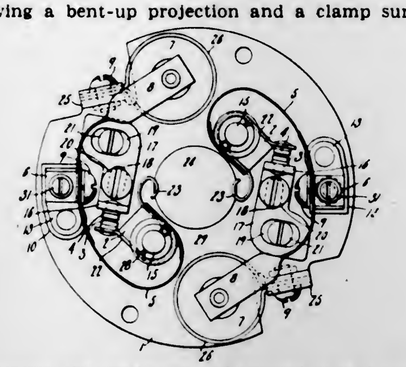
In a toy fishing outfit including a pole and a line, said pole having an elongated handle portion, a pair of spaced plates connected to the opposite sides of the handle portion intermediate the ends thereof, an annular row of pins carried by the plates, a shaft rotatably supported by the plates and around which the row of pins is concentrically arranged, one end of the shaft being extended and bent to form a handle, one end of the line being connected to the shaft and having a portion passing over one of the pins.

2,005,804
LEATHER FORMING MACHINE
John T. Riddell, Chicago, Ill.
Application December 18, 1933, Serial No. 702,918
3 Claims. (Cl. 69—1)

1. A device of the class described comprising a central support having a seat for a form block,

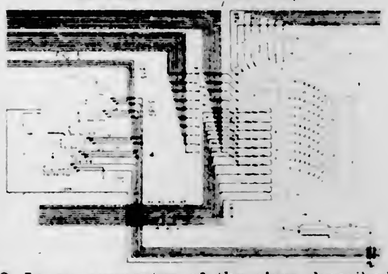
a series of stretcher members arranged in a ring about said support, leather gripping clamps on the ends of said stretcher members, said stretcher members being longitudinally adjustable,

spring balance elements interposed in said stretcher members, and jack means acting to shift said support relative to said stretcher members.



2,005,805
AERIAL
Henry Joseph Round, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application April 2, 1931, Serial No. 527,131
In Great Britain April 2, 1930
1 Claim. (Cl. 250—33)

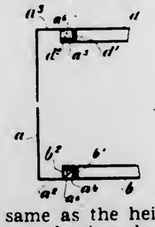
An antenna system adapted to radiate chiefly in the direction of its length, comprising a straight, linear, vertical aerial having an electrical length approximately equal to an even multiple of a half wave, said aerial being loaded uniformly at substantially regular intervals throughout its length with capacity members arranged at right angles to the length of the aerial, the number of said capacity members comprising at least eight to the wave length, said capacity members being supported at their centers by said aerial.



2,005,806
CIRCUIT BREAKER
Wolfgang E. Schwarzmann, Longmeadow, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a corporation of New York
Application September 16, 1932, Serial No. 633,412
3 Claims. (Cl. 200—30)

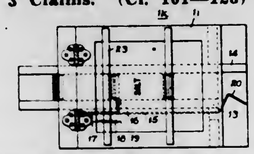
1. A circuit breaker comprising a disc, an upright condenser attached to said disc, the latter having a bent-up projection and a clamp sur-

rounding the condenser and secured to said projection.



2,005,807
STOCK QUOTATION POSTING AND MARGIN CALCULATING MACHINE
Clyde Smith, Hopkinsville, Ky., assignor to International Communications Laboratories, Inc., New York, N. Y., a corporation of New York
Application August 30, 1930, Serial No. 478,881
18 Claims. (Cl. 235—92)

18. In an apparatus of the class described, a plurality of credit balance registers, each adapted to indicate the balance on a particular account, each account having a plurality of units, means for selecting one of said registers, driving means for operating said selected register, selectable means for operating said driving means, and means for operatively associating said register with said driving means until said selectable means has completed one revolution for each unit contained in the account associated with said register.

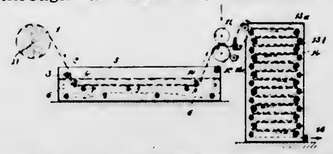


2,005,808
CONVECTION TYPE RADIATOR ENCLOSURE
Herbert Smith, Clinton, Mass., assignor to Edward C. Bowers and Charles L. Feldman, receivers for Wickwire Spencer Steel Company, New York, N. Y., a corporation of Delaware
Application September 23, 1932, Serial No. 634,491
2 Claims. (Cl. 237—79)

1. A sectional radiator enclosure having similar end panels provided with flanges having reversely turned tongues at their edges, ears carried by the tongues, a rear wall having its edges so bent as to form grooves which receive the proximate tongues and provide interlocking of the parts to prevent relative movement thereof in all directions except the vertical, an independent front wall having its edges so bent as to form grooves which receive the proximate tongues and provide interlocking of the parts to prevent relative movement thereof in all directions except the vertical, the over-all height of the front and rear

walls being the same as the height of the end panels, and a cover having depending flanges telescoping with said walls, respectively.

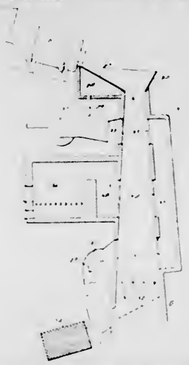
2,005,809
STENCILING METHOD AND APPARATUS
John C. Smith and George H. Campbell, Monaca, Pa., assignors to Solar Laboratories, Monaca, Pa., a corporation of Pennsylvania
Application July 9, 1932, Serial No. 621,628
3 Claims. (Cl. 101—123)



1. Stenciling apparatus comprising a guideway for articles to be stenciled, a stencil sheet or the like positioned above said guideway, a stop member normally positioned to limit movement of an article past the said stencil, and a tripping device positioned to be operated by an article entering the guideway and serving to withdraw the said stop member to inoperative position.

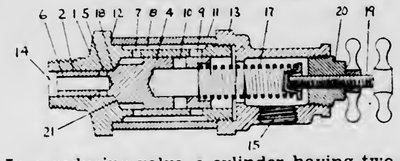
2,005,810
DYESTUFFS OF THE DIBENZANTHRONE SERIES AND PROCESS OF PREPARING THE SAME
Otto Stallmann, South Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 27, 1933, Series No. 658,833
22 Claims. (Cl. 260—54)

1. A transformation product of a mono-isoalkyl ether of dihydroxy-dibenzanthrone, being substantially identical with the product obtainable by heating a mono-isoalkyl ether of 12, 12' dihydroxy-dibenzanthrone in an inert organic solvent at a temperature between 170° and 220° C., in the presence of an anhydrous alkaline agent.



2,005,811
METHOD OF PREPARING AND MATURING ALKALI CELLULOSE
Franz Steimmig, Hermsdorf, near Kynast, Germany
Application February 23, 1933, Serial No. 658,132
In Germany March 7, 1932
2 Claims. (Cl. 260—10)

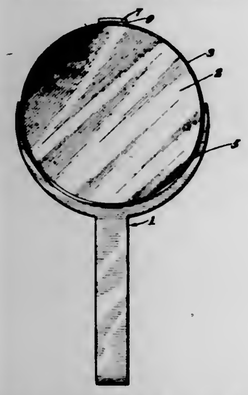
1. A method of preparing and maturing alkali cellulose for the production of viscose, comprising the use of a roll of a thin strip or web of cellulose, unwinding this continuous strip from the roll and introducing it into the mercerizing lye, freeing it at the exit from the lye from the excess of lye by squeezing rolls, leading it into and through an enclosed, uniformly heated



atmosphere to ripen the same, and controlling therein the degree of moisture.

2,005,812
METHOD AND APPARATUS FOR TREATING SLIMY MATERIALS
John Gordon Thomas, New York, N. Y.
Application May 12, 1931, Serial No. 536,704
Renewed February 2, 1935
15 Claims. (Cl. 110—8)

1. The method of disposal of wet sewage sludge and like matter which comprises distributing such matter onto the surface of pieces of carrier material sufficiently large to leave open interstices for free flow of gases between them when piled together with the wet matter distributed thereon, drying said matter thereon, and subjecting the dried matter on said carrier pieces to at least partial combustion by passing through a pile thereof oxygen-containing gases at a temperature above the ignition temperature of said dried matter.

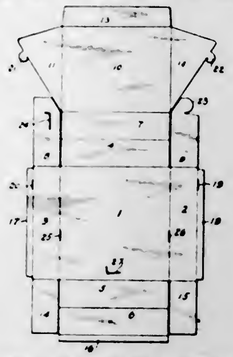


2,005,813
PRESSURE REDUCING VALVE
Thorvald L. Thorsen, Beloit, Wis.
Application May 23, 1934, Serial No. 727,018
1 Claim. (Cl. 50—14)

In a reducing valve, a cylinder having two coaxial bores, the inlet bore being smaller than the outlet bore, a piston slidably fitting both bores, a connection for supplying high pressure against the small end of said piston, communication from high pressure to low pressure being closed by the fit of the small end of the piston in the small bore when in its closed position and opened by a predetermined movement of said piston, said

communication including a passage outside the large bore cylinder formed by a separate sleeve fixed to the outside of the body of the cylinder, fitted pressure tight at both ends and enclosing a recess between the ends to form said passage.

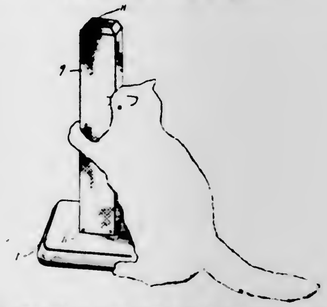
2,005,814
MIRROR
James F. Walsh, South Orange, N. J., assignor to Celluloid Corporation, a corporation of New Jersey
Application April 26, 1929, Serial No. 358,215
2 Claims. (Cl. 88—102)



1. A frame for mirrors and other articles comprising a supporting base having an undercut rim adapted to engage part only of the periphery of said article and an undercut lug adapted to engage a portion of the remainder of said periphery and resiliently carried by said base whereby the article may be snapped past the lug and into position on said base.

2,005,815
MANUFACTURE OF META-CRESOL-METHYL-ETHER
Walter V. Wirth, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 23, 1934, Serial No. 712,606
3 Claims. (Cl. 260—150)

1. A process for manufacturing the methyl-ether of meta-cresol, which comprises feeding into an aqueous solution of an alkali-metal-meta-cresolate a quantity of dimethyl sulfate, corresponding to between one-half and one mol per mol of the cresolate, heating the mass until the reaction has reached a point of substantial equilibrium, and then feeding in aqueous caustic alkali at a rate not higher than that required to maintain the mass at a slight alkalinity to Clayton yellow paper.

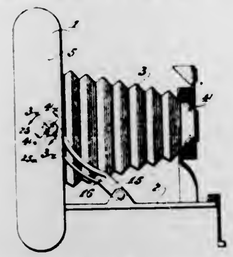


2,005,816
KNOCKDOWN TILT DISPLAY CARTON
Arthur J. Weiss, St. Albans, N. Y., assignor to Robert Gair Company, Inc., New York, N. Y., a corporation of Delaware
Application June 21, 1934, Serial No. 731,604
9 Claims. (Cl. 206—44)

1. A carton comprising a container portion including two opposed side walls having integral top ledges thereon, a coacting interposed wall, said ledges having aligned slots therein adjacent the interposed wall; a display panel or strip having its ends seated on said ledges, a

tuck flap extending from said panel and engaged against said interposed wall, and latch tabs turned downwardly from said ends and engaged in said slots.

2,005,817
SCRATCHING POST
Daniel D. Yoder, Seattle, Wash.
Application January 29, 1934, Serial No. 708,771
3 Claims. (Cl. 119—1)



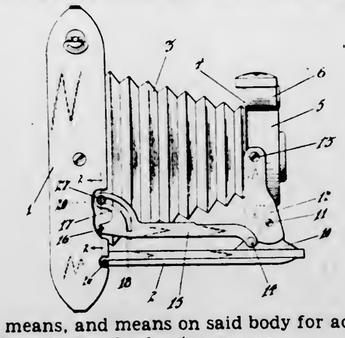
1. A device of the character described comprising a base and a standard fixed thereon having a fabric covering, and containers beneath the fabric covering for a substance attractive to cats.

2,005,818
CAMERA
Lionel R. Bell, Rochester, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application July 13, 1934, Serial No. 734,950
Renewed March 6, 1935
15 Claims. (Cl. 95—40)

1. In a camera, the combination of a camera box having two sides, a stud projecting inwardly from each of said sides, a camera bed hinged on said box, links pivotally engaged with said bed, said links each having a slot therein with which said links make sliding engagement with said studs, said links having recesses therein extending laterally from the upper end of said slots, each of said studs having a slot therein, dogs mounted in said slots, means for normally pushing said dogs outward into engagement with the sides of the slots of said links, a sleeve sliding on said stud having a cone-shaped seat on the end

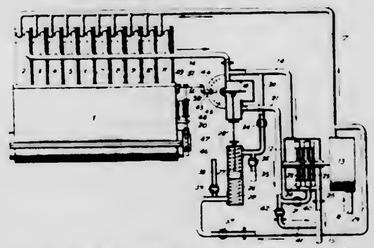
thereof, said dogs having beveled ends with which said cone-shaped seat is adapted to engage and

by which the dogs are drawn inward on the pressing of the sleeve.



2,005,819
CORE DRILL
Benjamin F. Blanchard, Brea, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application July 5, 1932, Serial No. 620,833
17 Claims. (Cl. 255—72)

1. A core drill comprising a rotatable housing carrying a core bit on its lower end, a core breaker and catcher positioned within the bit adjacent its lower end, a core barrel cooperating with said breaker and catcher to receive a core, a piston connected with said core barrel, a cylinder carried by said housing and receiving said piston, said housing and cylinder having means for transmitting circulated mud pressure to one end of the cylinder for maintaining the piston and core barrel in an elevated position.

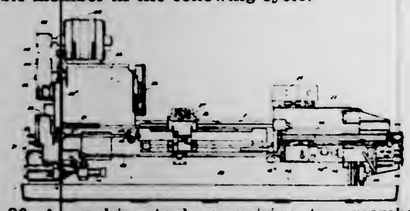


2,005,820
FOLDING CAMERA
Carl Bornmann, Lew W. Lessler, and Eric H. Heyer, Binghamton, N. Y., assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application December 18, 1934, Serial No. 758,070
10 Claims. (Cl. 95—40)

1. A folding camera comprising a body, a platform hinged thereto, a lens carrier pivotally supported on said platform, means pivoted to said body for supporting said platform in its opened position, said means having connection with said carrier to rock the same on its pivot when said platform is opened and closed, means on said body for locking and releasing said support-

ing means, and means on said body for actuating said locking and releasing means.

2,005,821
INTERNAL COMBUSTION ENGINE PLANT
Alfred Büchi, Winterthur, Switzerland
Application October 26, 1929, Serial No. 402,722
In Switzerland November 3, 1928
2 Claims. (Cl. 60—13)



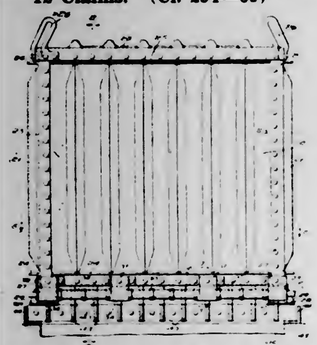
2. In a power plant comprising an internal combustion engine having a plurality of cylinders, a turbine driven by the exhaust gases of said engine, a compressor for supplying compressed air to the combustion cylinders for charging and scavenging purposes and driven by said exhaust turbine, an exhaust conduit interposed between internal combustion engine and turbine, into said exhaust conduit exhausting a plurality of combustion cylinders, one by-pass connecting said exhaust conduit to the atmosphere, one valve therein, a cylinder, a piston therein, a rod connecting said valve to said piston, a conduit between one side of said cylinder and said exhaust conduit, a conduit from the other side of said cylinder to the atmosphere, and spring means acting on said piston.

2,005,822
HYDRAULIC MACHINE TOOL
Edward P. Burrell, Shaker Heights, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application August 14, 1931, Serial No. 557,109
49 Claims. (Cl. 29—42)

1. A machine tool comprising two members one of which is relatively movable in opposite directions with respect to the other, one of said members being provided with a spindle and the other with an indexible member, means for rotating said spindle at different speeds, and hydraulic means for controlling the spindle speeds actuated by the movable member during its move-

ment in one operative cycle for changing the spindle speed during the movement of the movable member in the following cycle.

26. A machine tool comprising two members, one of which is relatively movable with respect to the other, one of said members being provided with a spindle and the other with an indexible member, means for rotating said spindle at different speeds, means for varying the rate of movement of the movable member, hydraulic means controlling said first named means, control valves for said hydraulic means, a hydraulic motor controlling said second named means, means controlling said hydraulic motor and including a stop roll to control the extent of movement of the movable part of the motor to obtain the desired rate of movement for the movable member, a control shaft operated by the movement of said movable member and actuating said valve and said stop roll, and a second stop roll for arresting the movement of said movable member and operatively connected with said control shaft.



2,005,823

MEANS FOR TRANSPORTING ARTICLES

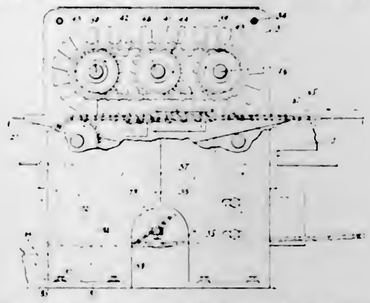
Frank Ditchfield, Cleveland, Ohio, assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Application May 14, 1931, Serial No. 537,343

12 Claims. (Cl. 294—69)

1. As an article of manufacture, a transportation container having an opening in the bottom thereof and a closure for said opening, said closure including a plurality of spaced bars, the container having means for supporting the same with the bars spaced above the points of support.

2,005,824



CLIPPER

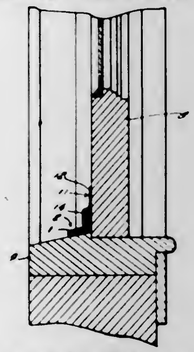
George Haumann, Painesville, Ohio, assignor to The Coe Manufacturing Company, Painesville, Ohio, a corporation of Ohio

Application December 18, 1931, Serial No. 581,924

17 Claims. (Cl. 164—68)

1. In an apparatus of the character described, a material supporting and conveying means continuously operating, a material severing means having a plurality of transversely extending knife blades spaced apart longitudinally and movable lineally in the same general direction as the

material, and settable means movable with said conveying means and adapted to actuate said knife blades to cause the latter to sever the material.



2,005,825

WEATHER STRIP

John J. Sheppard, Flint, Mich.

Application January 31, 1935, Serial No. 4,379

3 Claims. (Cl. 20—69)

1. A weather strip for windows comprising a holder of substantially angular transverse section, a rubber body of substantially angular transverse section mounted in the holder, said holder being adapted to be mounted on the window sill and including retaining flanges engaged over the longitudinal marginal portions of the rubber body, said rubber body comprising serrations projecting beyond the flanges for engagement with the window sill and the window sash.

2,005,826

STAND

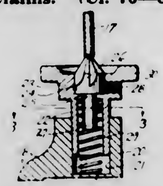
Harry W. Kulp and Martin C. Dellinger, Lancaster, Pa., assignors to K-D Manufacturing Company, Lancaster, Pa., a corporation of Pennsylvania

Application January 29, 1934, Serial No. 708,886

5 Claims. (Cl. 248—44)

4. A collapsible stand comprising a pair of wire rod members, each member having a relatively long substantially horizontal portion and having its rear end portion formed into a helix, the helices of said members being of such relative sizes that the helix of the one member will make a snug screw fit in the helix of the other member, and the common axis of the helices in assembled relation extending upwardly and being in-

clined forwardly toward and between said horizontal portions of said members.



2,005,827

HOLLOW DRILL SHARPENER

Harry I. Lewis and Frederick W. Seybold, Dayton, Ohio, assignors to Harris Seybold Potter Company, Cleveland, Ohio, a corporation of Delaware

Application November 18, 1933, Serial No. 698,660

5 Claims. (Cl. 76—82)

1. In a device of the character described, a base member with a flat supporting under surface and with a cylindrical guide surface at right angles to said supporting surface, a second member having a cylindrical surface fitting the cylindrical surface of the base member and movable with respect thereto both longitudinally and rotatably, said second member having a sharpening tool rotatable therewith and axially arranged with respect to said cylindrical surfaces, and a spring tending to separate said members longitudinally.

2,005,828

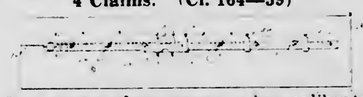
WHEEL

Orrel A. Parker, Cleveland, Ohio

Application November 4, 1931, Serial No. 572,945

7 Claims. (Cl. 301—12)

1. In a wheel structure, a main body comprising a spoke portion, a pair of demountable rims on the body, means for exerting thrust radially outwardly on the rims to clamp them on the body, the means comprising a device having a frame element engaging the rims radially inwardly thereof, and disposed between the end of the spoke portion and the rims, a wedge element movable axially on the frame element, and engaging the end of the spoke portion, a bolt loosely anchored at its head end in the frame element, and extending through the wedge element, a nut on the bolt engaging the wedge element to propel the element axially of the bolt in either direction, and adapted when turned in one direction on the bolt to propel the wedge element axially on the frame element in one direction to cause it to react wedgingly between the end of the spoke portion and the rims, the frame element having a portion extending radially of the wheel and overlapping the end of the spoke portion to prevent axial movement of the frame element in the other direction, and the frame element rockingly engaging the wedge element whereby the wedging force may be equalized between the frame element and the two rims.



2,005,829

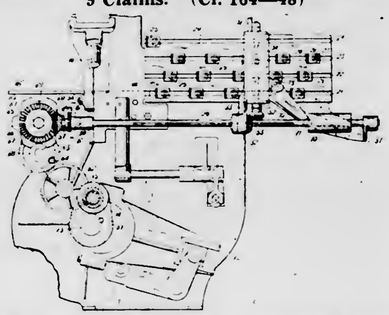
SQUARE SHEAR GAUGE

Herman C. Schlack, Detroit, Mich., assignor of forty-nine one-hundredths to Chester A. Kurrash, Detroit, Mich.

Application January 2, 1934, Serial No. 704,841

4 Claims. (Cl. 164—59)

1. In a square shear gauge, a bar calibrated in inches, a protractor in one end of the bar adapted for attachment to the bed of a square shear, the bar being turnable on the protractor and being adapted for attachment at an angle to the bed of the square shear, a member adjustable longitudinally of said calibrated bar, said member being provided with calibrations representing subdivisions of inches and registering with the calibrations on the bar, a series of dogs adjustably mounted on the calibrated bar, each dog being provided with a vertically slidable member normally arranged to drop by gravity below one edge of the calibrated bar, each slidable member being provided with a rounded edge so that a metal sheet may be moved therebeneath into contact with the edge of the bar and the calibrated member being adapted for accurately positioning the dogs on the calibrated bar.



2,005,830

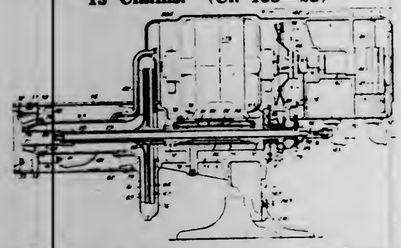
BACK GAUGE STOP MECHANISM

Frederick W. Seybold, Dayton, Ohio, assignor to Harris Seybold Potter Company, Cleveland, Ohio, a corporation of Delaware

Application May 23, 1933, Serial No. 672,397

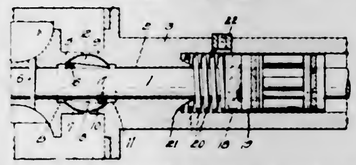
9 Claims. (Cl. 164—48)

1. In a machine of the class described, a reciprocable tool, a carriage for moving work toward the tool in successive steps, a stop carrying member associated with said carriage for movement proportionately therewith, a fixed stop carrying member, one of said members having therein a



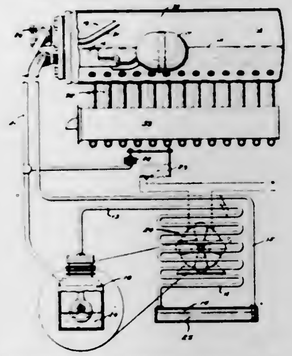
plurality of spaced guides for the reception of stops adjustable in said guides, the other of said members having retractable stops equal in number to the number of said guides and adapted to engage the said adjustable stops, and means operated by mechanical connections exclusively, and synchronized with the operations of the tool, for moving the retractable stops corresponding to the various guides into operative position in regular established sequence during the forward travel of the carriage.

2,005,831
POURING CARTON
James Shaw, Akron, Ohio, assignor to The Colonial Salt Company, Akron, Ohio, a corporation of Ohio
Application April 9, 1934, Serial No. 719,639
4 Claims. (Cl. 221—11)



1. In a folding carton having an end wall comprising an inner flap, an intermediate flap and an outer flap secured together in overlapping arrangement, said inner flap having an opening with two pairs of cuts extending therefrom and forming two opposed tongues, a spout member having side walls, extending through said cuts, and a wall which is attached to one of said tongues whereby the tongue functions as a hinge connection between the spout member and said inner flap, the last mentioned wall acting as a cover for said opening when the spout member is in its closed position, said intermediate flap being provided with an opening through which the spout member is adapted to be moved to and from its closed position, and said outer flap being provided with a tear-out portion overlying and normally concealing the spout member but which upon removal forms an opening in the outer flap through which the spout member is accessible.

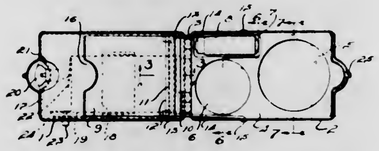
2,005,832
OIL BURNER
René M. Vidalie, San Francisco, Calif., assignor to Ray Burner Company, San Francisco, Calif., a corporation of Delaware
Application March 11, 1931, Serial No. 521,855
13 Claims. (Cl. 158—28)



1. In an oil burner; an oil atomizing cup mounted for rotation, a fan casing, a fan mounted in the casing for rotation with the cup, an air discharge nozzle extending from the fan casing to discharge air about the cup, a secondary nozzle positioned about the discharge nozzle, an insulating block carried by the secondary nozzle adjacent to the atomizing cup and positioned out of the normal path of the atomized oil discharged from the cup, an electrical resistance element mounted on the insulating block out of the path of oil atomized off the cup, and means automatically controlled upon starting for causing oil atomized off the cup to contact the insulating block adjacent the resistance element to be ignited, the block having a passage therethrough to permit an air circulation over the resistance element to cool the same, the secondary nozzle including an aperture for admitting air to pass over the resistance element.

2,005,833
FLUID SEAL
Frederick L. Schleicher, St. Louis County, Mo.
Application July 4, 1933, Serial No. 679,007
16 Claims. (Cl. 286—7)

1. In a fluid seal construction for rotary shafts, a socket member concentric with and revoluble with the shaft and disposed within a housing, a bearing for the shaft, a stationary socket member on the inner end of the bearing and concentric therewith, an intermediate seal member having a spherical surface surrounding the shaft and embracingly engaged by the socket members, said intermediate seal member provided with a bore of greater diameter than the shaft and means on the shaft for constantly changing the axis of the intermediate seal member with relation to the shaft and slowly rotating the same to effect an efficient lapping action to the sealing member surfaces.

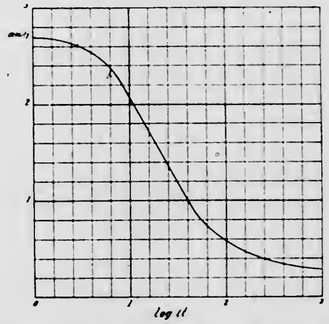


2,005,834
REFRIGERATION
Harry M. Williams, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application November 30, 1931, Serial No. 577,940
5 Claims. (Cl. 62—126)

5. A refrigerating system comprising a compressor, condenser and evaporator in refrigerant-

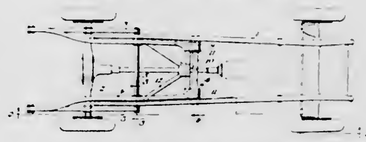
lubricant circulating relationship, said evaporator being provided with a liquid refrigerant inlet having a control automatically responsive to the liquid level in said evaporator and having a gaseous refrigerant outlet above the level of liquid refrigerant in said evaporator, said outlet having no connection below the liquid level, said system being charged with a refrigerant and a lubricant completely miscible with each other in the liquid phase at the normal evaporator operating temperatures.

2,005,835
VANITY CASE
Floyd M. Williamson, Detroit, Mich.
Application July 13, 1934, Serial No. 734,951
6 Claims. (Cl. 132—83)



1. In a vanity case, a casing member provided with cosmetic compartments, a mirror hingedly mounted on said casing member and forming a cover for the cosmetic compartments, a wiper bar slidable longitudinally of the mirror, a rod connecting each end of the wiper bar with the casing, the arrangement being such that as the mirror is turned in relation to the casing the wiper bar is moved longitudinally of the mirror.

2,005,836
SIGNALING SYSTEM
Milton I. Almquist, Maplewood, N. J., and Albert C. Thompson, New York, N. Y., assignors to American Telephone and Telegraph Company, a corporation of New York
Application August 29, 1933, Serial No. 687,368
4 Claims. (Cl. 179—43)

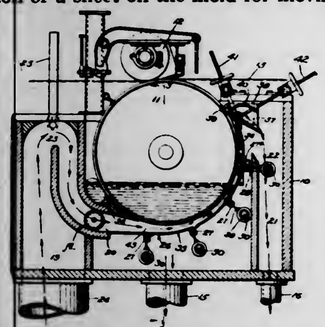


1. The method of signaling over a telephone circuit which consists in transmitting from one end of said circuit while said circuit is not in use for the transmission of telephone currents, an alternating current of a first frequency, transmitting from the other end of said circuit while said circuit is not in use for the transmission of telephone currents, an alternating current of a second frequency, removing the current of the first frequency from the telephone circuit so that an indication is provided at the distant end when a telephone connection is desired, removing the alternating current of the second frequency to clear the circuit for the telephone connection, reapplying and subsequently removing the alternating current of the second frequency to said circuit at the distant end, indicating at the first end of said circuit the application and removal of said alternating current, and reapplying the alternating current of the first frequency when the circuit is to be restored to its original condition.

2,005,837
MANUFACTURE OF PHOTOGRAPHIC EMULSIONS
Hans Arens, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application July 1, 1932, Serial No. 620,483
In Germany July 7, 1931
8 Claims. (Cl. 95—7)

1. The process of manufacturing photographic emulsion layers directly yielding positive pictures which comprises producing a strongly fogged silver halide emulsion by the addition of a substance which causes fog and bringing the fogged emulsion to strong solarization.

2,005,838
SHOCK ABSORBER FOR MOTOR VEHICLES
Louis A. Bartlett, Pittsburgh, Pa.
Application March 28, 1934, Serial No. 717,819
3 Claims. (Cl. 280—106.5)



1. In combination with a motor vehicle chassis having a rear axle assembly arranged rearwardly of the rear end of said chassis and including rear springs, a shaft journaled to the chassis forward of the rear end thereof and providing hangers for the front ends of said springs, an auxiliary frame journaled to said shaft and connected to the rear ends of said springs, cushion means between said auxiliary frame and the chassis, and anti-friction bearings provided between the shaft and the chassis and the auxiliary frame.

2,005,839
CYLINDER MACHINE
Jacob Edge, Downingtown, Pa., assignor to Downingtown Manufacturing Company, Downingtown, Pa., a corporation of Pennsylvania
Application January 26, 1933, Serial No. 653,726
8 Claims. (Cl. 92—43)

1. In combination, a vat, a cylinder mold therein, a wall confronting the surface of the cylinder mold and co-acting therewith to define

a forming section and means operable during the formation of a sheet on the mold for moving the

wall throughout its length toward and away from the cylinder mold.

2,005,840
INSULATING MATERIAL

Rudolf Engelhardt, Leverkusen-I. G. Werk, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application November 10, 1932, Serial No. 642,131. In Germany November 11, 1931

4 Claims. (Cl. 252—1)

1. Insulating material comprising a chlorodiphenyl being liquid at room temperature which has been exposed to an electrical high tension field until disruptive discharge has occurred and then purified.

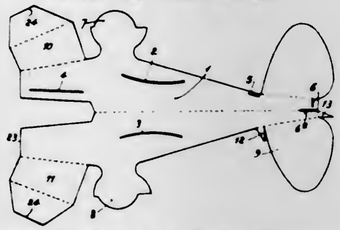
2,005,841
CLASP

Harry W. Kulp and Martin C. Dellinger, Lancaster, Pa., assignors to K-D Manufacturing Company, Lancaster, Pa., a corporation of Pennsylvania

Application January 29, 1934, Serial No. 708,884

4 Claims. (Cl. 24—252)

1. A clasp comprising a pair of substantially identically formed sheet metal plates, each plate being formed with an inwardly pressed integral horizontal strap having a portion straight in a direction parallel to the face of said plate, and an inwardly pressed circular stud centrally located above said strap, in combination with a resilient approximately W-shape spring-hinge member for hingedly connecting said plates together and for resiliently pressing the lower portions of said plates toward each other to grip an article between their registering opposed lower edge faces, the outer arms of said member diverging upwardly, being adapted respectively to fit between the outer faces of the respective straps and the adjacent inner faces of the respective plates and being formed in their upper portions with holes corresponding in shape to, and of such size as to snugly receive, the respective studs, said arms being of a width substantially equal to the length of the straight portions of said straps and having their extreme upper end portions inwardly bent or rounded to facilitate the passage of the upper portions of the respective arms upward over the respective studs.



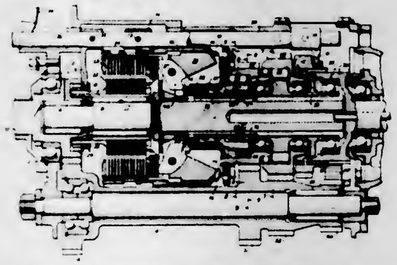
2,005,842
TOY AEROPLANE

Etienne Marcus, Paris, France

Application March 8, 1934, Serial No. 714,691

In France March 11, 1933

5 Claims. (Cl. 46—50)



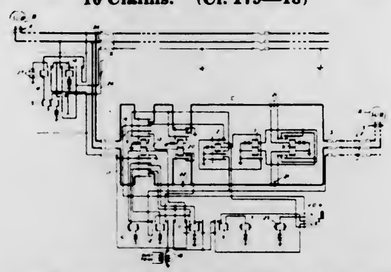
1. Toy aeroplane constructed by cutting and folding sheets of paper or the like, comprising a fuselage of V section, a balance weight at the front part of the fuselage obtained by cutting and folding from the sheet, a wing inserted in the fuselage and a steering rudder attached to the fuselage.

2,005,843
TRANSMISSION

Romeo M. Nardone, East Orange, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey

Application April 17, 1933, Serial No. 666,577

13 Claims. (Cl. 74—336)



1. In an automatic variable speed transmission, a driving shaft, a driven shaft, a direct drive clutch having a drum element connected to one of said shafts, and a hub element connected to the other of said shafts, frictional means connecting the hub and drum elements, a gear train including a gear having an overrunning clutch for connecting the shafts around the direct drive clutch, a manually shiftable member rotatable with the driven element for coupling the gear to the driven element around the overrunning clutch and disconnecting the direct drive clutch from the driving shaft by a unidirectional manual operation.

2,005,844
TELEPHONE SYSTEM

Frank Newforth, Jr., Temple City, Calif., assignor to American Telephone and Telegraph Company, a corporation of New York

Application April 17, 1934, Serial No. 721,041

10 Claims. (Cl. 179—18)

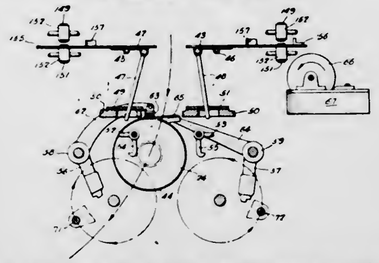
1. The combination in a telephone system of a conversational circuit, a terminal for said circuit arranged to assume one electrical condition when the circuit is idle and another electrical condition when the circuit is busy, means effective if said circuit is in a calling condition to remove the idle condition from said terminal so that the terminal presents neither the idle nor the busy condition, switching means for extending said circuit, and means effective in response to the extension of said circuit for placing the busy condition on said terminal.

2,005,845
METER CONSTRUCTION

Howard J. Pardee, New York, N. Y.

Original application February 10, 1931, Serial No. 514,884. Divided and this application June 2, 1933, Serial No. 674,102

9 Claims. (Cl. 73—167)



1. A gas flow measuring meter of the manometer liquid type particularly adapted for use in connection with a gas control unit or the like, said meter comprising an orifice assembly including an orifice, an inner tube depending from said assembly, an outer tube disposed in telescoping relation to the lower end of the inner tube, said outer tube being partly filled with manometer liquid, said assembly comprising a substantially tubular wall constituting an extension of said inner tube in substantial alinement with the latter, said orifice being arranged in said wall, means for attaching said assembly and tubes as a unit to said gas control unit or the like, and means for indicating the rate of flow of gas through the meter.

2,005,846
ROLL LABELING MACHINE

Philip D. Parsons, Swarthmore, Pa., assignor to Scott Paper Company, Chester, Pa., a corporation of Pennsylvania

Application February 17, 1934, Serial No. 711,744

13 Claims. (Cl. 216—25)

1. In a machine for wrapping paper rolls, the combination with roll-conveying means, of means for supporting a wrapper element in the path of said roll, and means operative on opposite ends of said wrapper to cause the latter to embrace the roll with the ends thereof in overlapped relation, said means comprising an element operative to retain the underlapped end of the wrapper in position against the roll until said end is engaged by the overlapped portion.

2,005,847
SOUND FILM

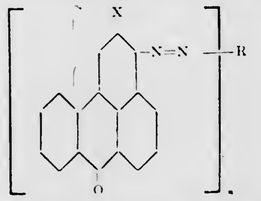
Richard Schmidt, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York

Application January 28, 1933, Serial No. 654,089

In Germany January 30, 1932

2 Claims. (Cl. 274—43)

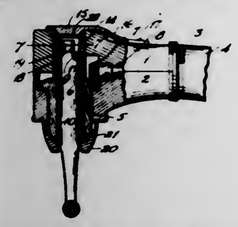
1. A lenticular film bearing a mechanical sound track in form of a zigzag sound groove within the lenticular elements.



2,005,848
WATER INSOLUBLE AZO DYESTUFF CONTAINING A BENZANTHRONE NUCLEUS

Gerhard Schrader, Opladen, near Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application March 25, 1933, Serial No. 662,828. In Germany April 2, 1932



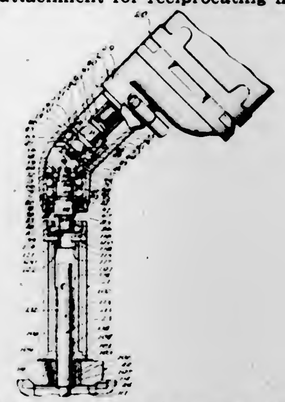
14 Claims. (Cl. 260—86)

1. Water insoluble dyestuffs of the general formula:

wherein X stands for a hydrogen atom or for an alkoxy group, *n* stands for one of the numbers 1 and 2, and R stands for the radical of an enolic or phenolic coupling component suitable for producing azodyestuffs, yielding, when produced on the fibre, various shades of good fastness to boiling and chlorine.

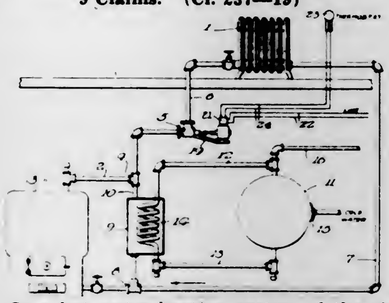
2,005,849
ANGLE DENTAL HANDPIECE
Perry R. Skinner, Amsterdam, N. Y.
Application July 6, 1933, Serial No. 679,248
7 Claims. (Cl. 32—27)

1. A dental handpiece comprising a rotatable sleeve, a tool-receiving member, means for causing a tool to rotate with the member, and means whereby the tool receiving member is caused to rotate with the sleeve and a tool is engaged and prevented from withdrawal from the tool-receiving member.



2,005,850
ATTACHMENT FOR MEASURING TAPES
Eugene J. Witchger, Saginaw, Mich., assignor to The Lufkin Rule Company, Saginaw, Mich., a corporation of Michigan
Application January 29, 1934, Serial No. 708,798
5 Claims. (Cl. 33—137)

1. The combination with a metal tape having a handle body and means detachably securing the tape thereto, a reinforcing member of bendable resilient ribbon metal fixed lengthwise to the handle body and extending from the end thereof a substantial distance and overlying the tape, a keeper slidingly connecting the tape to said resilient reinforcing member at a point remote from said handle body and arranged to permit relative endwise movements of the keeper and tape upon coincident lateral bending of the tape and reinforcing member, said detachable securing means and said keeper being arranged to permit angular sidewise sliding movement of the tape end relatively to the body.

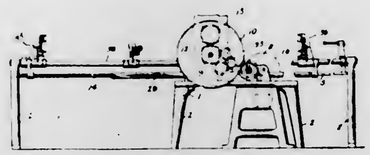


2,005,851
VALVE SEAT GRINDER
Frans O. Albertson, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a corporation of Iowa
Application July 19, 1934, Serial No. 735,932
8 Claims. (Cl. 51—241)

1. In a valve seat grinding apparatus, the combination of a pilot stem adapted to be fixedly secured in centered position in a valve stem guide, with a grinding wheel holder slidably and rotatably mounted on said pilot, a motor driver adapted to rotate said grinding wheel holder, a grinding wheel and an angular attachment providing an operative connection between said motor driver and said grinding wheel holder whereby said grinding wheel holder may be rotated in an upright position, with the motor driver disposed at an angle, said angular attachment having a drive shaft resiliently mounted in said angular attachment for reciprocating movement

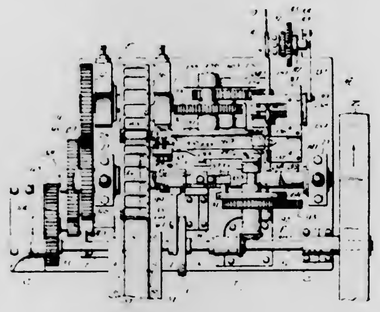
against the compression of a spring resiliently to support the weight of the motor.

2,005,852
HOT WATER HEATING SYSTEM
Frederick C. Broderick, Winnetka, Ill.
Application February 25, 1933, Serial No. 658,532
9 Claims. (Cl. 237—19)



6. In a hot water heating system of the class described the combination with a boiler, a radiator, a supply conduit leading from said boiler to said radiator, and a return conduit leading from said radiator to said boiler, all arranged in a water filled circuit, of a water heating device associated with said boiler and arranged to receive heat from the boiler water by thermal gravitational circulation thereof, a valve in said supply line arranged to normally resist circulation of boiler water to said radiator, a valve in said return line arranged to prevent passage of boiler water therethrough to said radiator, a thermostat positioned to be affected by said radiator, and means controlled by said thermostat arranged to actuate said valves to permit circulation of boiler water to and from said radiator.

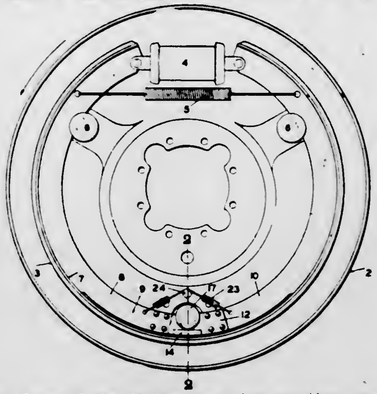
2,005,853
FEED MECHANISM FOR ROLLING MACHINES
Homer J. Davis, Wilmington, Del.
Original application September 2, 1930, Serial No. 479,378. Divided and this application October 14, 1931, Serial No. 568,760
16 Claims. (Cl. 93—83)



1. A feeding mechanism for a rolling machine comprising individually mounted duplex feeding

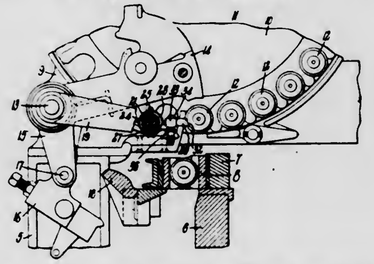
devices for reciprocating material and automatic

reversible drive mechanism periodically connecting with the said feeding devices.



2,005,854
SUCKER MACHINE
James A. Davis and Charles L. Moyer, Chicago, Ill., assignors, by direct and mesne assignments, to Parker-Meyer-Dennis Company, Dubuque, Iowa, a corporation of Iowa
Application October 16, 1933, Serial No. 693,713
Renewed February 7, 1934
35 Claims. (Cl. 107—8)

21. In a sucker machine, movable confection forming means having a plurality of handle receiving apertures therein, handle forming means, means for supplying handle material to said handle forming means, handle feeding means for feeding handles from said handle forming means to adjacent said confection forming means, means for inserting a portion of each handle into a said handle receiving aperture, and means for driving said confection forming means and the handle inserting means in timed relationship.



2,005,855
BRAKING APPARATUS
Burns Dick, Ferguson, and Steve Schnell, St. Louis, Mo., assignors to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application February 26, 1932, Serial No. 595,244
16 Claims. (Cl. 188—78)

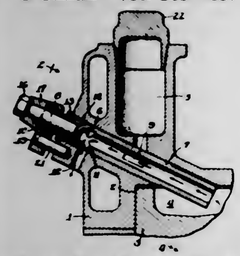
1. In braking apparatus, the combination of a drum and a flexible brake band adapted to have its ends expanded into engagement with the drum, said band comprising a lining carrying portion and a reinforcing web, the web being divided into two parts at a point intermediate its ends and each of the adjacent ends of the web parts

being free of the lining carrying portion over a substantial arc thereof.

2,005,856
FRICTION DEVICE FOR FILLING CARRIERS
Sherwood O. Dodge, Medford, Mass., assignor to Guaranteed Parts, Inc., Allston, Mass., a corporation of Massachusetts
Application April 30, 1934, Serial No. 723,081
8 Claims. (Cl. 139—251)

1. A friction device for the filling carriers of a filling replenishing loom comprising, in combination, a support, a sleeve rotatably mounted thereon, a holder upon said sleeve, a friction member mounted upon said holder and adapted to engage the filling on a filling carrier next to be transferred from a hopper for a reserve supply of filling carriers to a shuttle located therebeneath, and means to clamp said friction member to said holder and the holder to said sleeve.

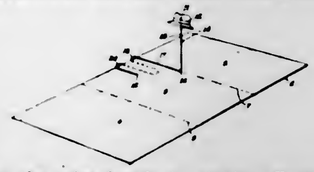
2,005,857
SPARK PLUG CONNECTION
Harry A. Douglas, Bronson, Mich.
Application October 14, 1932, Serial No. 637,718
8 Claims. (Cl. 173—328)



1. In a spark plug connection, the combination with a metallic shell providing a cap for the plug, said cap having a central recessed portion axially extended from said plug; of a central electrode carried by the plug and having one end received in said central portion in electrical communication therewith; a metallic socket member having a hollow base portion superposed telescopically on said central portion and permanently secured to the cap; an integral terminal receiving socket

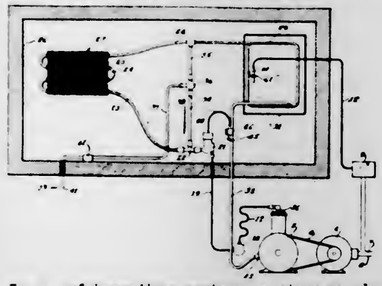
in said socket member transverse to said electrode, the hollow interiors of said socket and base portion intersecting; a detent loosely housed by the base portion and projected into the termi-

nal receiving portion; and a coil spring housed in the base portion annularly of the central portion of the cap and pressing the detent toward the terminal receiving socket.



2,005,858
COMPRESSION CONTROL APPARATUS
Carl C. Hinkley, Chicago, Ill., assignor to The Buda Company, Harvey, Ill., a corporation of Illinois
Application March 26, 1934, Serial No. 717,338
1 Claim. (Cl. 123—48)

In combination with a cylinder block providing a cylinder and an auxiliary chamber spaced apart therefrom, a straight passage leading from the exterior of the block past said chamber into the top of said cylinder, a valve insertable into said passage having a hollow interior, a port in the wall of said valve for establishing communication between the cylinder and chamber when the valve is rotated to one position, a duct from the atmosphere leading to the surface of said passage, and a second port from the hollow interior of said valve registerable with said duct when the valve is rotated to a second position, said ports being positioned so that only one of them may be made operative at one time and so that both may be rendered inoperative at a third position of the valve, and means for rotating said valve to any of said three positions.

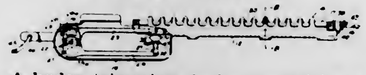


2,005,859
MAIL ADVERTISING DEVICE
Walter W. Hoke, Forest Hills, N. Y., assignor to Robert Stuart, Forest Hills, N. Y.
Continuation of application Serial No. 651,991, January 16, 1933. This application March 29, 1934, Serial No. 717,911
11 Claims. (Cl. 40—124.1)

1. The combination with a folder of sheet material, of a wire bent to form a base portion to extend in close relationship with said folder and an upright portion to extend away from said folder when unfolded, said base portion being of the character of a clip adapted to be slipped over an edge of said folder with a torsional portion thereof extending from said upright portion, and a display carried by said upright portion at a distance from said torsional portion, said torsional portion twisting under the influence of swinging movement applied to said upright portion and display with said torsional portion as axis to permit said upright portion and display to be positioned between folder folds without sub-

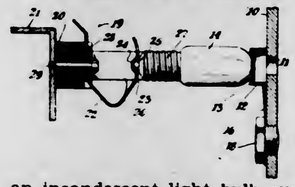
jecting the wire bends to strain affecting their character, said torsional portion untwisting thereby causing said upright portion and display to pivot back to their original upright position upon opening of said folds, that portion of the wire between said torsional portion and display flexing thereby causing said display to oscillate in mid-air.

2,005,860
COOLING SYSTEM
Victor C. Huntington, Blue Island, Ill., assignor to Wepsco Steel Products Co., Blue Island, Ill., a corporation of Illinois
Application October 20, 1933, Serial No. 694,389
13 Claims. (Cl. 62—116)



1. In a refrigerating system, a storage chamber, a heat-absorbing device in said chamber, a beverage cooler comprising a cooling coil, said cooler having a brine therein adapted to solidify about the cooling coil, means for supplying a refrigerant to said heat-absorbing means and thence to said cooling coil, means controlled by the temperature of the storage chamber to bypass the refrigerant directly to the cooling coil, and means responsive to a predetermined amount of solidification of the brine for stopping operation of the refrigerant supplying means.

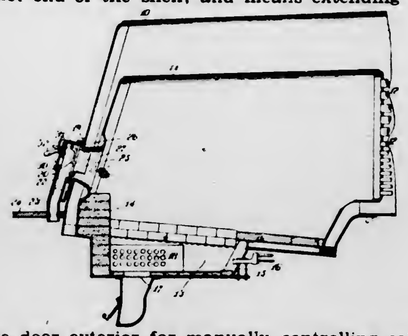
2,005,861
MANUFACTURE OF HYDROCARBONS
Vladimir Ipatieff, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application January 16, 1933, Serial No. 652,009
5 Claims. (Cl. 260—168)



1. In the art of alkylation, the method which comprises reacting a hydrocarbon of the benzene series boiling within the gasoline range with a gaseous olefin in the presence of a phosphoric acid catalyst under conditions to produce a substantial quantity of alkylated derivatives within the gasoline boiling range, and recovering the gasoline boiling derivatives thus formed.

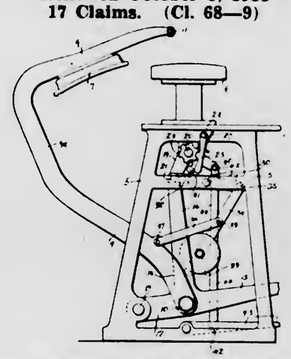
2,005,862
HEDGE TRIMMING DEVICE
Richard C. Johnsen, Hillside, N. J.
Application May 9, 1933, Serial No. 670,078
8 Claims. (Cl. 30—11)

1. A hedge trimming device comprising a casing, said casing having integral extended portions forming a channel and tooth formations, said tooth formations being spaced apart, a knife frame within said channel supporting a flexible knife between said tooth formations, and means including a motor and a pair of lever rods connected thereto, one of said rods being pivotally connected to said knife, the other of said rods being linked to said casing.



2,005,863
SIGNAL LIGHT SUPPORT
Henry Koch, Jamaica, N. Y., assignor to Dictograph Products Company, Inc., New York, N. Y., a corporation of Delaware
Application August 11, 1932, Serial No. 628,290
2 Claims. (Cl. 177—329)

1. In an incandescent light bulb support the combination with a panel having a visual aperture therein, of bulb-tip supporting means mounted on said panel to support the tip of a signal light bulb in substantial alignment with the visual aperture and permitting light to pass from the bulb through the aperture, a pair of spaced apart spring arms adapted to grip the sides of the base of the bulb, a resilient central bulb contact engaging means disposed between said spring arms, common means for supporting said spring fingers and said central bulb contact engaging means in substantial alignment with the visual aperture including means to insulate said central bulb contact engaging means from said spring arms, a circuit terminal connected to one of said spring arms, and another circuit terminal connected to said central bulb contact engaging means.

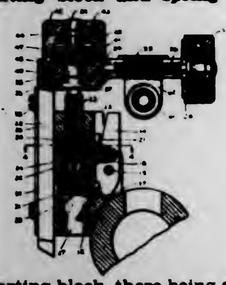


2,005,864
FIREBOX DOOR
Thomas E. Layden, Topeka, Kans.
Application June 5, 1933, Serial No. 674,368
2 Claims. (Cl. 110—175)

1. In a locomotive firebox, the combination of a hollow fire-door open at the rear to the fire-door opening of the firebox and terminating at the bottom in a downwardly disposed open portion whereby air is admitted into the chamber of the door; a fixedly secured conduit member arranged to register with the lower end of said door portion when the door is closed; an open ended shell member mounted at one end on the rear side of the door so as to extend into the door-opening of the fire-box, the discharge end of said member having a plurality of rearwardly diverging passages arranged side by side and spaced apart, while the other end of the shell member communicates with the air chamber in the door; a damper pivoted in the upper part of the chamber in the door and arranged to extend across the inlet end of the shell; and means extending to

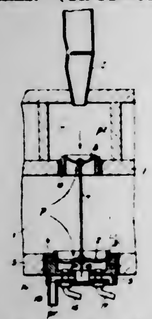
the door exterior for manually controlling said damper whereby flow of air from the chamber in the door and through said passages may be regulated.

2,005,865
PRESS
James Camrod Ledbetter, Jackson Heights, Long Island, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a corporation of New York
Application January 28, 1929, Serial No. 335,476
Renewed October 3, 1933
17 Claims. (Cl. 68—9)



1. A press comprising a frame, a coacting head and buck, an upright having its upper end attached to the head, a bell crank having an arm projecting therefrom, a frame pivot on which the arm is mounted, the lower end of the upright being pivoted on the bell crank in spaced relation from the frame pivot, a link having its upper end pivoted on the frame and its lower end pivotally connected to the bell crank forming a toggle, and means to urge the upright and head upwardly and to counterbalance the same in the pivotal movement of the upright.

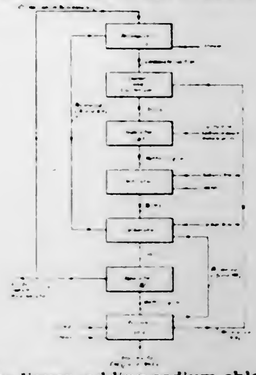
2,005,866
GUN SIGHT
Kenneth J. Lowe, Ilion, N. Y., assignor to Remington Arms Company, Inc., a corporation of Delaware
Application October 12, 1932, Serial No. 637,443
6 Claims. (Cl. 33—56)



1. In a firearm sight, in combination, a supporting block adapted for permanent attachment to a firearm, a sight mounting block adapted to engage and move longitudinally upon said sup-

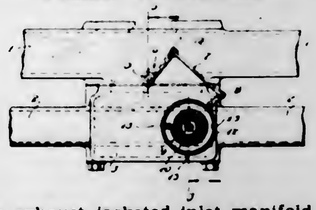
porting block, means for holding said mounting block against longitudinal movement on said supporting block comprising a lever pivoted in said mounting block and spring urged toward

said supporting block, there being a recess in said supporting block adapted to receive a part of said lever, and settable means adapted to lock said lever engaged in said recess.



2,005,867
CONTROL SYSTEM AND TO THE CONTROL OF FLUID OPERATED MECHANISM
Max Maag, Schwamendingen, near Zurich, Switzerland
Application January 24, 1934, Serial No. 708,136
In Germany January 23, 1933
8 Claims. (Cl. 84—336)

1. Controlling system of the character described comprising a plurality of pneumatically operable instruments of different characteristics, floating valves individually associated with and arranged to open towards said instruments to control the operation of the same, a separate control chamber for each floating valve, and means responsive to the pneumatic pressure in each control chamber and connected with the associated floating valve whereby the amount of said pressure will determine the lift of and the throttling effect exerted by said floating valve, each control chamber being provided with an admission port and with a discharge port, the various ports being differentially proportioned and dimensioned in dependence of said characteristics.

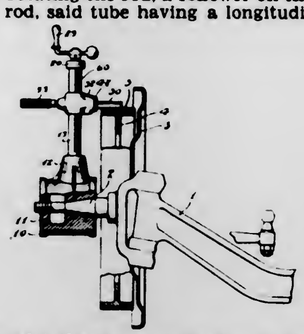


2,005,868
MANUFACTURE OF SODIUM CARBONATE MONOHYDRATE
Robert Burns MacMullin, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia
Application March 25, 1932, Serial No. 601,144
2 Claims. (Cl. 23—63)

1. In the manufacture of sodium carbonate monohydrate, the improvement which comprises decomposing an aqueous solution containing sodium bicarbonate with steam to form a solution containing sodium carbonate, precipitating sodium carbonate monohydrate from this solution by the addition of ammonia and separating the precipitated sodium carbonate monohydrate from

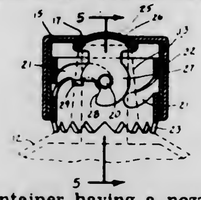
the mother liquor, adding sodium chloride to the mother liquor and carbonating the resulting brine to precipitate sodium bicarbonate, separating the precipitated sodium bicarbonate and supplying sodium bicarbonate so precipitated to the first-mentioned decomposition.

2,005,869
HOT SPOT MANIFOLD
Jacob Meinsinger, Detroit, Mich., assignor to George M. Holley and Earl Holley, of the Holley Carburetor Company, Detroit, Mich.
Application March 14, 1932, Serial No. 598,593
1 Claim. (Cl. 123—122)



In an exhaust jacketed inlet manifold of the type described, an internal combustion engine associated therewith having an exhaust manifold, a cooling radiator and a cooling fan therefor, a valve means for controlling the flow of exhaust gases from the exhaust manifold through the exhaust jacket of the inlet manifold, thermostatic means mounted entirely upon the outside of said exhaust jacket remote from said valve and in the air stream from said cooling fan means interconnecting said thermostatic means and said valve means.

2,005,870
BRAKE GAUGING DEVICE
Alvin L. Miller and Russell H. Miller, Detroit, Mich.
Application June 20, 1932, Serial No. 618,114
5 Claims. (Cl. 33—180)



1. A brake gauging tool comprising a hub member adapted to be rotatably mounted upon a wheel spindle or axle shaft, a radially disposed tube fixed to the hub, an apertured washer at the inner end of the tube, a screw threaded rod on the axial center of the tube the inner end of which

is journaled in the washer, a collar journaling the rod at the outer end of the tube, an inverted cup shaped collar through which the rod extends and fitted over the outer end of the tube, means securing the collar to the tube and serving to hold the rod against axial movement in the tube, a handle for rotating the rod, a follower on the threads of the rod, said tube having a longitudinally ex-

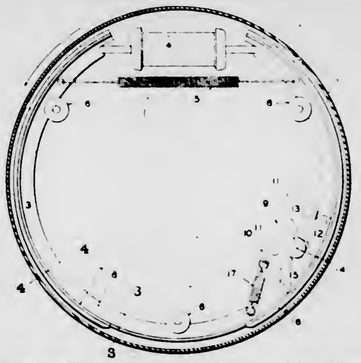
tending slot therein, a projection on the follower extending through the slot, an apertured block fitting over the tube and having an aperture for receiving the projection of the follower, means in the block for receiving and holding a brake gauging element, and a handle screw threaded into the block and adapted to be abutted against the tube to hold the block against movement.

2,005,871
CLOSURE FOR CONTAINERS
Frank I. Remy, Syracuse, Ind.
Application February 17, 1934, Serial No. 711,716
9 Claims. (Cl. 221—60)

1. In a container having a nozzle protruding therefrom, a closure therefor comprising an apertured cap through which said nozzle is adapted to extend when said closure is in open position, a fixed collar secured about said nozzle provided with cam slots therein, bosses associated with said cap extending through said cam slots to permit rotation of said cap on said collar, a valve pivotally mounted on said bosses within said collar, and means for swinging said valve about its pivotal mounting to open and closed position relative to said nozzle upon rotation of the cap.

2,005,872
DETACHABLE CLASP
Louis Rocke, Brooklyn, N. Y.
Application April 28, 1933, Serial No. 668,396
15 Claims. (Cl. 24—205)

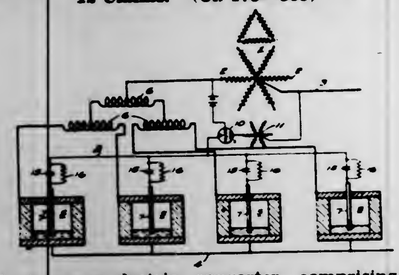
1. In a clasp for separable fasteners of the type wherein a plurality of metallic fastening means are permanently secured upon a pair of flexible stringers and a sliding cam is provided for locking or unlocking said fasteners, male and female members having abutting edges adapted to be crimped on the ends of said stringers, a pin extending downward from one end of the male member, a laterally positioned eye adapted to receive said pin extending from the female member, a prong projecting outward and extending downward from the male member forming a hook, and a socket closed at the front and open



at the upper end protruding from said female member adapted to receive said prong, said parts adapted to disengage and interengage with longitudinal movement of one in relation to the other.

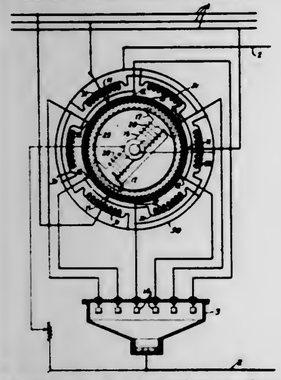
2,005,873
SMOKING PIPE
Stanley S. Schaffer, Chicago, Ill.
Application December 6, 1933, Serial No. 701,113
7 Claims. (Cl. 131—12)

1. A pipe having a stem and bowl and a passage therethrough connected with the bottom of the bowl, and a removable U-shaped tube having one open end communicating with said passage without blocking the same and the other end communicating with the passage by means of an opening facing toward the bowl, a part of the wall of said tube being positioned to seal said passage between said opening and the mouthpiece, said passage being wholly unobstructed between the bowl and its open end except by said wall.



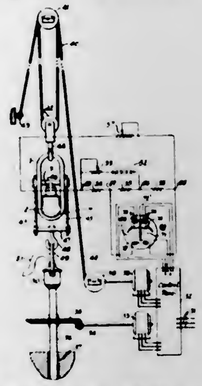
2,005,874
BRAKING APPARATUS
Steve Schnell, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application February 26, 1932, Serial No. 595,259
5 Claims. (Cl. 188—78)

1. In braking apparatus, the combination of a rotatable brake drum, a flexible brake band adapted to cooperate therewith, anchor means for the band intermediate the ends thereof, brake lining secured to the band, and means for ap-



plying the band to the drum, said brake band being free of lining over that portion of the band forward of the anchor means where during brake application the pressure between the band and the drum would be the greatest if the lining were continuous.

2,005,875
IGNITION SYSTEM
Daniel Silverman, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 14, 1934, Serial No. 711,192
12 Claims. (Cl. 175—363)



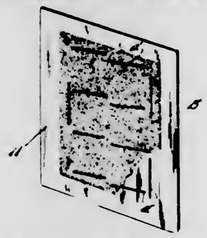
1. A vapor-electric converter comprising a source of polyphase currents, a load circuit, a plurality of parallel valves between each phase of the source and the load circuit, a make-alive electrode associated with each of said valves, said electrodes being connected in parallel, a source of excitation current substantially co-phasal with the polyphase source and means responsive to the polarity of the polyphase source for connecting said excitation source to said electrodes and capacitors in series with each of said electrodes for controlling current flow thereto.

2,005,876
ELECTRICAL CONVERSION SYSTEM
Joseph Slepian, Pittsburgh, and Leon R. Ludwig and Daniel Silverman, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 19, 1934, Serial No. 726,582
14 Claims. (Cl. 175—363)

1. In an electrical conversion system having a vapor electric converter for transferring energy between alternating and direct current circuits, a dynamo-electric device comprising a closed armature winding, a series of taps in said winding for connection to an alternating current circuit, a second series of taps in said winding for connection to the valves of the converter, said second series of taps being a multiple of said first series of taps, a star-connected winding connected to the direct current circuit, said star-connected winding being closely coupled with said closed winding, a squirrel cage winding coupled with said closed winding said squirrel cage winding rotating at substantially synchronous speed with the fundamental field set up in the closed winding.

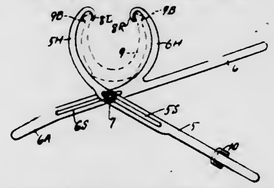
2,005,877
CONTROL MEANS FOR WELL DRILLING EQUIPMENTS
Morris Stone and René Baudry, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 29, 1933, Serial No. 700,314
9 Claims. (Cl. 255—19)

1. A rotary well-drilling system, comprising a drill stem, in combination with, a weighing device including a receptacle containing a liquid, a passage extending from the receptacle and into which the liquid may be extruded when the receptacle is deformed, means for subjecting the receptacle to the weight of the drill stem whereby the receptacle is deformed, and means responsive to the amount of liquid extruded from the receptacle to control the operation of the drill stem.



2,005,878
ELEVATOR CONTROL SYSTEM
Kenneth M. White, Mooresville, Ind., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois
Application October 29, 1932, Serial No. 640,173
Renewed October 19, 1934
23 Claims. (Cl. 172—152)

13. In an elevator system, an elevator car movable in a hatchway, a motor for driving said car, a generator for supplying power to said motor, a field winding for said generator adapted to be variably energized to control the direction of movement and speed of said motor, means for controlling the energization of said field winding to cause said motor to drive the car in substantial conformity with a predetermined speed characteristic including a rheostat for controlling the current in said field winding and a regulating voltage means adapted to vary the current in the field winding in accordance with the difference between the actual speed of the motor and a predetermined speed as intended by the adjustment of the said rheostat, said variation of current being such as to effect a decrease in the difference between the actual speed of the motor and the predetermined speed desired, and means for effecting the operation of said regulating voltage means whereby it does not effect substantial divergence from said predetermined speed characteristic, said means including motive means



for effecting the adjustment of said rheostat in a succession of a large number of comparatively small incremental changes, and means operable in accordance with the position of the car in the hatchway for automatically controlling said motive means.

2,005,879
DISPLAY CARD AND METHOD OF SECURING ARTICLES THERETO
Raymond W. Albright, Akron, Ohio, assignor to American Anode, Inc., Akron, Ohio, a corporation of Delaware
Application June 10, 1932, Serial No. 616,427
5 Claims. (Cl. 206—80)

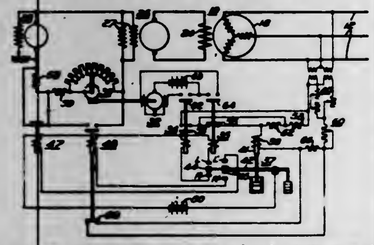
1. An article comprising a sheet member with a plurality of articles mounted thereon by means of an element of strip material passing over the articles or parts thereof and through the sheet member, portions of said strip material being secured to the sheet member by an adherent elastic rubber film.

2,005,880
TIRE-SPREADER
William M. Anderson, Virginia, Minn.
Application February 1, 1934, Serial No. 709,322
6 Claims. (Cl. 152—27)

4. A tire spreader comprising a pair of pivotally connected lever members each comprising a main lever arm formed straight rearwardly of the pivot, one member formed with an upward rearwardly curved hook forward of the pivot and the other member formed with a corresponding upward and forwardly curved hook rearward of the pivot, said latter member formed further with a forwardly and downwardly directed contact arm in angular relation to its main lever part, each member provided with an elongated slot, said slots intersecting, a pivot bolt passed through said slots and slidable therein.

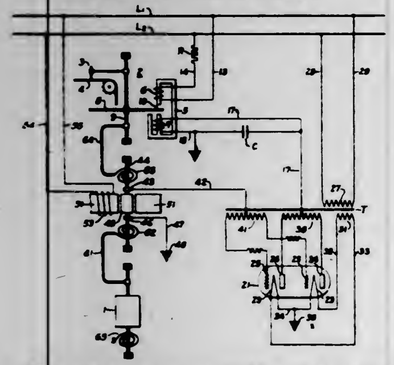
2,005,881
TRANSMISSION LINE CLAMP
Edwin E. Arnold and Charles Le G. Fortescue, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 24, 1933, Serial No. 672,662
3 Claims. (Cl. 248—63)

1. A supporting clamp for a transmission line cable comprising a resilient tie member for disposition longitudinally of the cable and in contact therewith for a substantial portion of its length, means for securing the ends of said tie member to the cable, and means engaging the central portion of said resilient tie member and free of the cable for securing the clamp to a support, said means and resilient tie member having cooperating portions to maintain them in operative relation.



2,005,882
TRANSMISSION LINE SUSPENSION
Edwin E. Arnold, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 29, 1933, Serial No. 678,247
8 Claims. (Cl. 248—63)

8. In combination with a body subject to vibration, a vibration damper comprising means set into vibration in response to the vibration of said

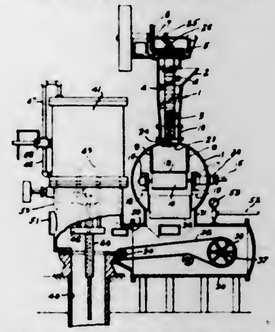


body, means for varying the period of vibration of said first means to change the period of vibration of said body and energy dissipating means between said first and second mentioned means.

2,005,883
REGULATING SYSTEM
John H. Ashbaugh, Longmeadow, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 20, 1933, Serial No. 681,296
4 Claims. (Cl. 171—119)

1. In combination, a dynamo-electric machine, means for adjusting the excitation of said machine, regulator means responsive to the voltage of said machine for controlling said excitation adjusting means, means for raising the voltage setting of the regulator, and means actuated by said regulator for making effective said setting-raising means upon the occurrence and for the duration of a predeterminedly large drop in machine voltage.

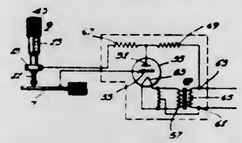
2,005,884
ELECTRICAL MEASURING AND REGULATING SYSTEM
Henry L. Bernardie, Kearny, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 26, 1933, Serial No. 682,263
5 Claims. (Cl. 172—239)



1. In apparatus for controlling the position of a movable device in accordance with the position of a movable primary element, a controlling member movable through a range of positions including a normal position, resilient means mechanically connecting said controlling member to said primary element and to said device for moving said controlling member in accordance with a difference of movements of said primary element and said device, means responsive to the deflection of said controlling member from said normal position for moving said device at a rate substantially proportional to said deflection and in a direction to reduce said deflection, whereby said device is brought to a position corresponding to that of said primary element without inertia overtravel.

2,005,885
ROLL
William E. Brindley, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application January 23, 1932, Serial No. 588,444
7 Claims. (Cl. 92—77)

1. A method of making a composite roll comprising constructing a cylindrical body portion, forming a plurality of cylindrical fibrous sections bound together by a hardened binder, heating the cylindrical body portion and the cylindrical fibrous sections, applying an adhesive material to the cylindrical body portion, pressing the cylindrical fibrous sections upon the cylindrical body portion, and drying the composite roll.



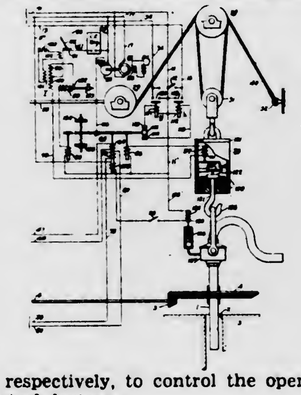
2,005,886
METHOD OF AND APPARATUS FOR MOLDING CLAY BODIES
Davis Brown, Los Angeles, Calif.
Application January 18, 1932, Serial No. 587,195
18 Claims. (Cl. 25—15)

1. In a machine for extruding clay bodies under pressure, the combination of a clay cylinder provided with a head at one end and a die at the other, a clay plunger reciprocatingly mounted in the cylinder, means for moving the clay plunger into and out of the clay cylinder and head, a lateral port in said head at a point substantially between the clay cylinder and plunger when said plunger is in raised position, a substantially air-tight housing in operative communication with said lateral port, means for introducing clay into the housing, means for moving clay in loose form through the housing toward said lateral port, and means for maintaining said housing, head and cylinder at a subatmospheric pressure.

2,005,887
GRID GLOW MICROMETER
Robert W. Carson, Rochelle Park, N. J., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application June 5, 1931, Serial No. 542,416
10 Claims. (Cl. 177—311)

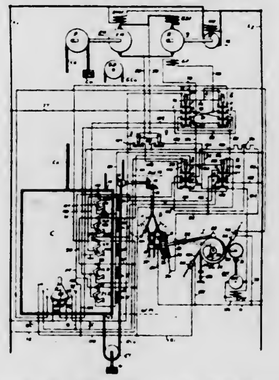
1. A micrometer comprising a contact element to be juxtaposed to the surface of an object to be measured, said contact element being of such structure that the electro-static capacity between said contact element and said surface is substantially negligible, means for indicating the position of said contact element, means for causing non-ohmic currents to flow between said contact

and said object when a plane through the outermost region of said contact element is at distance of the order of 10^{-8} centimeters from a plane through the outermost region of the object to be measured and indicator means responsive to said non-ohmic currents.



2,005,888
MACHINE FOR OPERATING UPON ARTICLES ASSEMBLED FROM ADHESIVE MATERIALS
Malcolm S. Cate, Watertown, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application August 8, 1934, Serial No. 738,956
4 Claims. (Cl. 12—51)

1. Apparatus for operating upon articles assembled from adhesive materials, said apparatus comprising a support over which the article may be manipulated by the operator, a reciprocating carriage adjacent thereto, hammer means loosely retained by said carriage in position to be projected against the article as the article is moved upon the support, means for driving said carriage, and means controlled by presence of an article on the support for automatically regulating said driving means.



2,005,889
AUTOMATIC DRILLING SYSTEM FOR ROTARY DRILLING EQUIPMENT
Herbert G. Dillon, William C. Dreyer, and Harold C. Jenks, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 12, 1932, Serial No. 642,416
26 Claims. (Cl. 255—19)

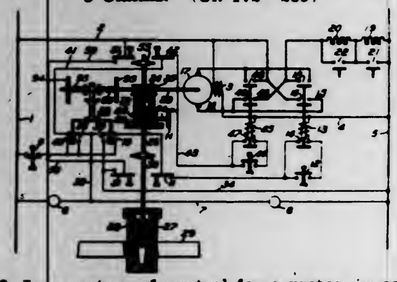
1. In a rotary well-drilling system, in combination, a drill table, a drill stem, a drilling motor for rotating said table and stem, a hoisting device, a hoisting motor for operating the hoisting device, a mud pump, control devices for controlling the operation of the hoisting motor, load-responsive means operable in response to the load on the drilling motor, tension indicating means for indicating the tension in the drill stem, and means responsive to the load-responsive means, the pressure in the mud pump, and the tension indicating

means, respectively, to control the operation of said control devices.

2,005,890
MOTOR CONTROL SYSTEM
James Dunlop, Park Ridge, Ill., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application November 13, 1929, Serial No. 406,842
15 Claims. (Cl. 172—152)

1. In a control system for an elevator car, motive means for said car operable to cause said car to accelerate from zero speed to an intermediate speed, and from said intermediate speed to a higher speed, and to decelerate from said intermediate speed and said higher speed to zero speed, means for controlling said motive means, means operable from one position to another position in accordance with a predetermined rate at which said car should decelerate from said higher speed to zero speed, and operable between an intermediate position and said other position in accordance with a predetermined rate at which said car should decelerate from said intermediate speed to zero speed, means operable to return said operable means past said intermediate position to said first position after said deceleration period, means operable in accordance with the actual rate at which said car decelerates for cooperating with said first named operable means when said predetermined rate and said actual rate differ to cause said control means to vary said actual rate to decrease said difference, restraining

means operable when said control means are actuated to cause said car to accelerate to said intermediate speed to prevent said returning means from moving said first named operable means past said intermediate position, and means operable upon movement of said control means to accelerate said car to said higher speed to render said restraining means ineffective.



9. In a control system for an elevator car operable in a hatchway, a motor for moving said car, a source of power for said motor, and control mechanism to control said source to decelerate said motor and to cause the speed of said motor, during deceleration, to follow a predetermined succession of values with respect to the travel of said car in said hatchway, said control means comprising a regulator, means for differentially controlling said regulator in accordance with the actual speed of said motor and said predetermined succession of values, said regulator being effective, in the event the actual speed of said motor differs from said predetermined succession of values, to control said source to reduce said difference, and means comprising a control switch operable to render said control mechanism effective.

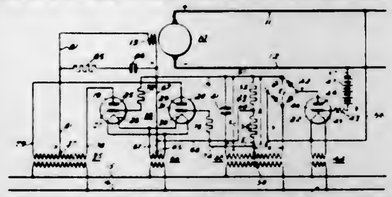
2,005,891

VALVE-OPERATED MECHANISM

Robert S. Elberty, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 27, 1933, Serial No. 691,158
8 Claims. (Cl. 172—239)

8. In a system of control for a motor, in combination, a motor, a source of energy for the motor, means for connecting the motor to the source of energy, a differential having a pair of sun gears and a planet gear, manually operable means, a spring biased member disposed to operatively connect the motor and one sun gear and connections between the manually operable means and the other sun gear, and selective control means comprising switching means operable by said spring biased member to control the operation of the motor and means responsive to certain operations of said planet gear to also control said motor.



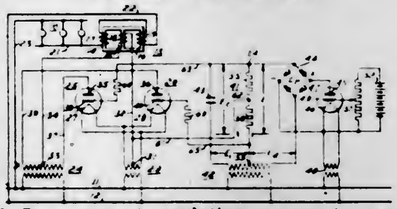
2,005,892

ALTERNATING-CURRENT REGULATOR

Finn H. Gulliksen, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania

Application October 13, 1931, Serial No. 568,537
6 Claims. (Cl. 171—119)

6. In a voltage regulating system for an electrical generator having an excitation-control circuit energized from an alternating-current power source through electronic-tube current-rectifying means, the combination of means, including a phase-shifting bridge circuit for impressing a control potential upon said rectifying means, a full-wave rectifier connected in said circuit and



an electronic tube connected to said rectifier to adjust the phase-shift effected by the circuit, means for impressing a control voltage upon said tube, and means for varying said control voltage in accordance with the voltage of said generator.

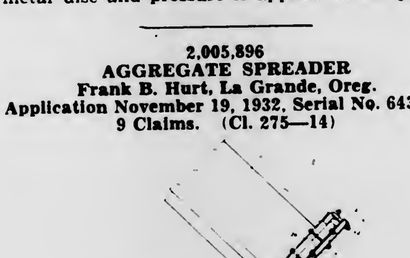
2,005,893

CURRENT REGULATING SYSTEM

Finn H. Gulliksen, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 7, 1932, Serial No. 621,141
7 Claims. (Cl. 175—363)

1. In a current-regulating system, in combination, an alternating-current power source, current rectifying and control means energized from said power source and comprising a pair of electronic tubes having grid control elements, a phase-shifting bridge comprising a capacitor and a full-wave rectifier energized from said power source and disposed to impress an alternating-current control potential upon said grid elements, and means associated with said bridge circuit for varying the conductivity of the rectifier, thereby varying the phase positions of said control potentials with respect to the potential of said power source to control the effective current passed by the electronic tubes.



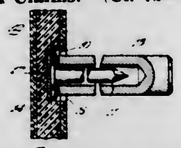
2,005,894

SHIP PROPULSION AUTOMATIC STABILITY CONTROL

Rudolph E. Hellmund, Swissvale, and Allan D. Forbes, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 30, 1934, Serial No. 718,264
19 Claims. (Cl. 172—8)

1. An electric power system such as is utilized in electric ship propulsion comprising a variable voltage and variable frequency dynamo electric machine and a propeller driving dynamo electric machine disposed to be connected to the first named machine, in combination with stability control means, said means including a pair of coils arranged to produce opposing effects, one of said coils being connected to be responsive substantially to the ratio of the voltage of the first-named machine to the product of a variable and the frequency of the first-named machine



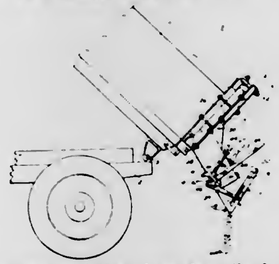
and the other of said coils being connected to be responsive to the torque of one of said machines.

2,005,895

FASTENING DEVICE

Paul M. Hengstenberg, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 11, 1933, Serial No. 670,481
4 Claims. (Cl. 72—19)



1. A means for securing a panel having a veneered surface to the wall of a building comprising a metal disc disposed at the bottom of a hole countersunk in the surface of the panel opposite the veneered surface, a nail or the like for securing the panel to the wall, a metal plate having an opening therein for receiving the shank of the nail, the corners of the plate being bent at an angle to one side of the plate and adapted to expand into the countersunk hole to engage the metal disc and pressure is applied to the plate.

2,005,896

AGGREGATE SPREADER

Frank B. Hurt, La Grande, Oreg.

Application November 19, 1932, Serial No. 643,432
9 Claims. (Cl. 275—14)

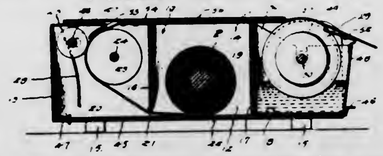
5. In a device of the class described, the combination of top and bottom plates spaced apart, end plates for the top and bottom plates, the top plate upwardly extending to form the back end gate of a truck body when attached thereto, a settable pouring end gate mounted upon the rear ends of the top and bottom plates, manually settable means for positioning the end gate, flow diaphragms settably positioned between the top and bottom plates and means for locking the flow diaphragms relative to the top and bottom plates.

2,005,897

ELECTRODE FOR A VAPOR ELECTRIC DEVICE AND METHOD OF CONSTRUCTING THE SAME

Dewey D. Knowles, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 27, 1933, Serial No. 691,153
6 Claims. (Cl. 250—27.5)



1. The method of securing an electrode head to a stem which comprises placing the head and stem in the desired position with respect to each other, winding adjacent portions of the head and stem with wire and spraying a layer of metal over that portion wrapped with the wire.

2,005,898

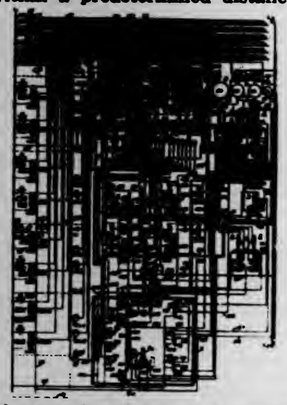
LABEL DISPENSING AND MOISTENING MACHINE

Arthur La Grange, Vinton, Iowa

Application October 24, 1933, Serial No. 695,043
6 Claims. (Cl. 91—51)

1. A label dispensing and moistening means, comprising a housing open along the bottom thereof, opposed flanges carried by the lower edges of the bottom, a bottom wall slidably engaging the flanges, means for releasably holding said wall against movement, a compartment in the housing for holding a strip of labels in roll form and opening through the bottom of the housing, means for exposing a predetermined length of the strip on the top of the housing, means for moving a predetermined length of the strip for exposure on the top of the housing, and means for moistening the strip after it has been exposed on the top of the housing.

2,005,899



ELEVATOR CONTROL AND SIGNALING SYSTEM

Frank E. Lewis, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania

Application August 26, 1929, Serial No. 388,310
Renewed August 15, 1934
18 Claims. (Cl. 187—29)

1. In an elevator signaling system for a plurality of cars operable past a floor, call-receiving means and circuits therefor individual to each car for receiving calls for service at said floor, electromagnetically operable means for each car, operable upon the application of voltage above a predetermined value, to render the call-receiving means for that car effective to receive calls for service, a circuit for said floor having a portion thereof common to all of said cars, and a plurality of branches thereof, one for each of said cars, each branch including the said electromag-

netic operating means for that car, means individual to each car and operable correspondingly to the position of that car for completing the branch of said circuit for that car when said car is within a predetermined distance of said

floor, and means in said common portion of said circuit operable upon the completion thereof through any branch for rendering the voltage available to the remainder of the said branches below the said predetermined value.

2,005,900

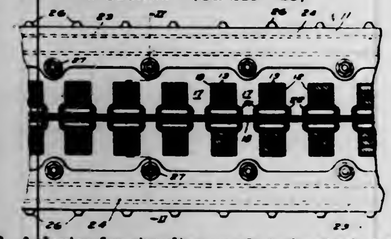
PRIMING SOLUTION FOR WALL PAPER AND LIKE PASTES

George Littig, Sacramento, Calif.

No Drawing. Application September 28, 1934, Serial No. 745,938

2 Claims. (Cl. 134—18)

1. A priming compound for the mixing with wall paper and like pastes consisting of an admixture of ingredients in the following proportion: 50 parts solution silicate of soda, 44 parts of water, and 6 parts of a 12½% copper sulphate solution.



2,005,901

INDUCTION SHEET HEATER

Thomas H. Long, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 29, 1932, Serial No. 625,585

6 Claims. (Cl. 219—13)

6. A device for simultaneously inductively heating and moving a metal sheet including a slotted laminated core structure, a polyphase energizing coil in said slots, a cooling means for the coils located in the slots and constituted by tubular slot wedges and cooling means for the core located adjacent that face of the core opposite to the slotted face and including a fluid-traversed conduit and means holding the conduit against the core, the contact pressure between the conduit and the face of the core being in direct proportion to the pressure of a fluid in the conduit.

2,005,902

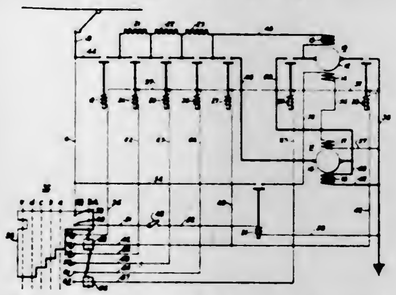
WELDING ELECTRODES

David L. Mathias, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Application September 30, 1932, Serial No. 635,609

2 Claims. (Cl. 219—8)

2. The method of making a metallic welding electrode which consists in annealing the metallic core of the electrode, subjecting the core to a shot blasting operation whereby the exposed surface thereof is simultaneously cleaned and roughened, and subsequently applying a welding flux to the cleaned and roughened surface.



2,005,903

MOTOR CONTROL SYSTEM

Frederick W. McCleskey, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

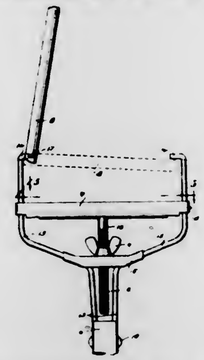
Application July 26, 1933, Serial No. 682,226

6 Claims. (Cl. 172—179)

4. In a motor control system, in combination, a plurality of motors, a source of power for the motors, each motor having an armature winding, a series field winding and a shunt field winding, means for connecting the motors to the power source, means for increasing the voltage applied to the motors to accelerate the motors, means for energizing the shunt field windings during acceleration to increase the accelerating torque of the motors and for deenergizing the shunt field windings after full voltage is applied to the motors to increase the motor speed, means for establishing dynamic braking connections for the motors, and means for energizing the shunt field windings during dynamic braking to produce a quick braking effect.

2,005,904

MOP HEAD HOLDER



Roy A. Myers, St. Paul, Minn.

Application January 16, 1933, Serial No. 651,903

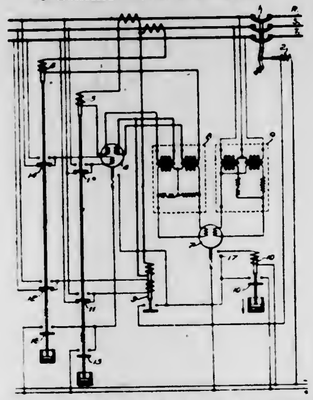
1 Claim. (Cl. 15—153)

In a mop head, a fork having a pair of prongs provided at their ends with inturned retaining lugs, a relatively fixed clamping bar normally held on the retaining lugs, and a movable clamping bar between the prongs and having on each end a pair of guide lugs, said guide lugs, outwardly of the prongs, being bent around said prongs, said movable clamping bar having adjacent each end between the respective lugs a pair of transversely spaced stop shoulders and also having between each pair of stop shoulders a notch-like passageway for the respective inturned lug, said

prongs being wider, transverse to the plane of the

fork, than the inturned lugs and the stop shoulders engaging the prongs.

2,005,905



PROTECTIVE SCHEME FOR TRANSMISSION LINES

Hermann Neugebauer, Berlin-Spandau, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

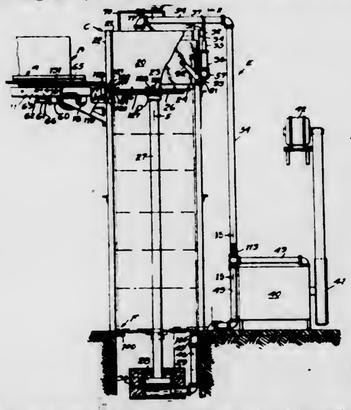
Application October 19, 1932, Serial No. 638,585

In Germany October 20, 1931

8 Claims. (Cl. 175—294)

1. In protective apparatus for a polyphase sectionalized transmission circuit, a circuit breaker in said circuit, relay means operable in response to unsymmetrical faults in a predetermined section of said circuit, relay means operable only with time element greater than that of said first-mentioned relay means in response to symmetrical faults in said predetermined section, and means for causing said circuit breaker to open in response to operation of either of said relay means upon the occurrence of a fault in said predetermined section.

2,005,906



BOX STACKER

Harold C. Pierce, Anaheim, Calif., assignor, by direct and mesne assignments, to Food Machinery Corporation, a corporation of Delaware

Application February 7, 1933, Serial No. 655,607

21 Claims. (Cl. 214—6)

1. A stacking machine of the class described embodying: a trap adapted to receive and support one of the articles to be stacked; an elevator adapted to be raised and held in elevated position by a pressure fluid; a platform on said elevator below said trap; means for opening said trap to release an article supported therein; valve means for releasing said pressure fluid thereby permitting downward movement of said elevator;

means operable by an article received in said trap for opening said valve means; and means associated with said elevator for holding said valve means open after said first mentioned valve opening means is disengaged by said article and until said elevator reaches a predetermined position.

2,005,907

TROLLEY WIRE SUPPORT

William Schaake, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

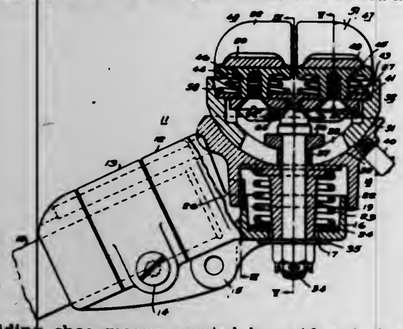
Application October 14, 1933, Serial No. 693,559

8 Claims. (Cl. 191—40)

1. A support for a trolley wire comprising, in combination, an ear for gripping the trolley wire, a support member movably mounted on said ear, and a plurality of resilient members interposed between said ear and said support member to maintain the ear in alinement with the trolley wire and to permit relative movement therebetween when a current collector traverses the ear and portions of the trolley wire adjacent thereto.

2,005,908

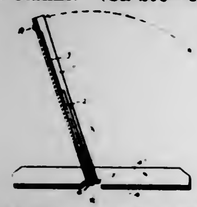
CURRENT COLLECTING EQUIPMENT



William Schaake, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

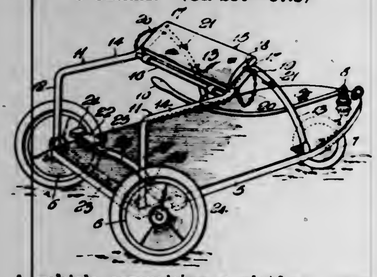
Application August 8, 1934, Serial No. 738,990.

15 Claims. (Cl. 191—59.1)



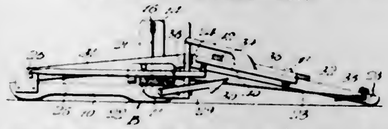
1. A current collector for electric vehicles comprising, in combination, a support member disposed to be carried by a trolley pole, a swivel cup provided with an upturned bearing surface and disposed to be carried by said support member, a swivel provided with a downturned bearing sur-

face and mounted in said swivel cup with said bearing surfaces in engagement, and articulated



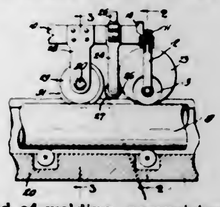
sliding shoe means carried by said swivel and disposed to engage a conductor for collecting current therefrom.

2,005,909
COMBINED CASE AND STAND FOR THERMOMETERS
Alfred B. Schupp, Richmond Hill, N. Y.
Application June 27, 1934, Serial No. 732,677
3 Claims. (Cl. 206—16.5)



1. A foldable thermometer case comprising a flat base member having a pair of spaced parallel side flanges perpendicular thereto, an inwardly extending tongue on the base member between said flanges, a cover member having a pair of spaced parallel side flanges provided with transversely aligned longitudinal slots, a wire disposed transversely across the bottom of said base member beneath said tongue and having upturned ends provided with laterally bent termina's passed through the cover flange slots and anchored in the base member flanges whereby to provide slidable and pivotal connection between said members.

2,005,910
PUSH-POLE VEHICLE
Paul Andersen, Brooklyn, N. Y.
Application April 2, 1934, Serial No. 718,726
3 Claims. (Cl. 280—87.5)

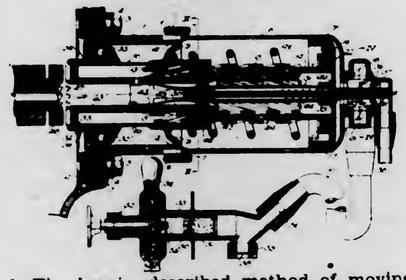


1. A vehicle comprising a platform upon the rear portion of which the user may stand, two longitudinally extending side rails secured to and projecting upwardly from said platform, a knee support extending between the upper portions of said side rails near the front ends thereof, means pivotally mounting said knee support on said side rails for swinging to an inclined position at which it may engage the user's knees when the latter are forwardly sprung, said pivotal mounting means also allowing swinging of said knee support to a horizontal position for use as a seat, means for holding said knee support in either of said positions, and supporting means for said platform.

2,005,911
BULL RAKE, LOADER AND LIFTER
Christian Christiansen, Fargo, N. Dak.
Application April 17, 1934, Serial No. 721,032
9 Claims. (Cl. 214—140)

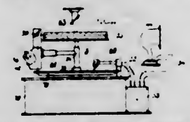
1. In a combined bull rake and load lifter, a base, a lifting fork mounted thereon, two draught devices at opposite sides of said base respectively, means operatively connecting said draught devices with said base and fork for pulling said base along the ground when said connecting means is pulled forwardly by said two draught devices, and for lifting said fork when the same connecting means is pulled laterally by the same two draught devices, and means for preventing lifting of said fork when said draught devices are pulled forwardly.

2,005,912
WELDING APPARATUS
Estes C. Drake, Wheeling, W. Va.
Application April 27, 1931, Serial No. 533,223
16 Claims. (Cl. 219—10)



1 A method of welding, comprising: interposing a filler strip between the edge portions of the work to be welded, to furnish material for the weld; moving said work continuously relatively; progressively feed ng said strip between said portions, during such movement; and causing current to flow between said portions, in an amount to heat said portions to one temperature, and along said strip and between said strip and at least one of said portions, in an amount to heat said strip to a substantially different temperature.

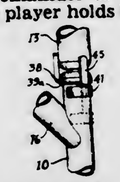
7. A welding system, using a filler strip to be interposed between the edge portions of the work to be welded, and to furnish material for the weld, comprising: means for continuously moving said work relatively; means for progressively feeding said strip, between said portions, during the operation; and means connected to said portions and to said strip, connected to said strip



at a point spaced from the welding point, to cause current to flow between said portions, and to cause current to flow along said strip and between said strip and at least one of said portions, in such respective amounts that said strip is heated to a temperature substantially different from that to which said portions are heated.

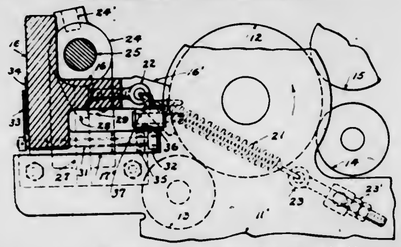
2,005,913
MOTOR AND MOTIVE SYSTEM
Roscoe A. Coffman, Pittsburgh, Pa.
Application May 11, 1931, Serial No. 536,389
In Canada August 1, 1930
12 Claims. (Cl. 60—44)

1. The herein described method of moving a part to be moved wherein the ignition of a part of the fuel is initiated at a point remote to said part to generate sufficient gas pressure to propel a major portion of the fuel together with ignited particles of fuel through a system to a burning chamber closely adjacent to said part where combustion of said major portion of the fuel is completed.



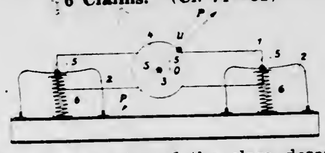
2,005,914
APPARATUS FOR MAKING AND REPRODUCING SOUND AND PICTURE RECORDS
Berthold Freund, Berlin-Schoneberg, Germany
Application December 8, 1931, Serial No. 579,754
In Germany December 11, 1930
13 Claims. (Cl. 88—16.2)

1. In an apparatus of the class described, a record bearer for a sound record of a plurality of continuous turns and a picture record of a plurality of continuous turns of lesser number than the sound record, sound sensitive transmitting means and the picture sensitive transmitting means cooperating with the record bearer to transmit respectively the sound and picture records, and means for imparting a relative movement between the sound record and the sound sensitive means and between the picture record and the picture sensitive means wherein the relative movements are different in accordance with the difference in length of the sound and picture records.



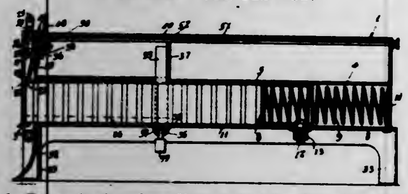
2,005,915
GOLF CLUB
Charles H. Grelle, Mount Carmel, Conn.
Application June 12, 1934, Serial No. 730,194
16 Claims. (Cl. 273—81)

1. In a practice golf club, a shaft having a head and a handle, said handle having a displaceable section therein adapted to be grasped by the lower hand of the player and to be displaced from alinement with the remainder of the handle and the shaft in case the player holds back too much with



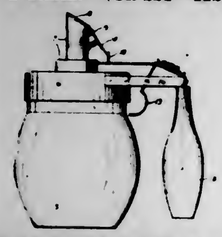
his lower hand in the stroke of a practice swing, and means on said shaft for selectively preventing the displacement of said section by the impact of the club with a ball.

2,005,916
INKING MECHANISM FOR PRINTING MACHINES
Frederick Lamatsch, Grantwood, N. J., assignor to Irving Trust Company, permanent trustee for R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application January 12, 1933, Serial No. 651,295
15 Claims. (Cl. 101—366)



1. In an inking mechanism for a printing machine, an ink cylinder, an ink distributing bar, means for urging the bar towards the cylinder, and stops carried by the bar and adjustable to regulate the amount of clearance between the bar and the cylinder, and means for indicating the degree of adjustment.

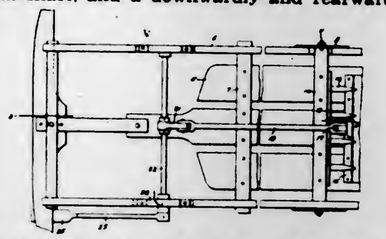
2,005,917
MEANS FOR THE PRODUCTION OF CIRCULAR OR ELLIPTICAL OSCILLATIONS
Gerhard Linke, Magdeburg, Germany, assignor to firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany
Application December 14, 1932, Serial No. 647,291
In Germany December 19, 1932
6 Claims. (Cl. 74—61)



1. In an apparatus of the class described, a mass; means for imparting to said mass oscillations in a closed path; resilient means for supporting said mass having a substantially constant reactance to movement of said mass in all directions in a plane containing the closed path, in addition to a supplementary vertical reactance for neutralizing the gravitational force exerted by said mass; said supplementary vertical reactance being exerted by resilient means whose movement under initial stress is a multiple of its movement caused by oscillation of said mass.

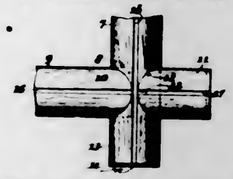
2,005,918
DISPENSING MACHINE
Alvin Levingood, Los Angeles, Calif.
Application November 2, 1932, Serial No. 640,772
2 Claims. (Cl. 312—68)

1. In a device for dispensing books of matches that are thicker at one end than at the other, a container defining an elongated feed chamber for receiving a number of books of matches arranged on edge, an exit communicating with said chamber at the forward end thereof to permit books of matches to pass laterally from said chamber singly, an ejector at the front end of said container for reciprocal movement laterally of said chamber to press the foremost book of matches through said exit, said ejector comprising a plunger, one end thereof having a width not to exceed the smallest dimension of a book of matches and the opposed end having a width equal to the thicker portion of said book.



2,005,919
SUGAR BOWL
Louis J. Militello, Wood River, Ill.
Application September 22, 1934, Serial No. 745,009
1 Claim. (Cl. 221—112)

A sugar bowl provided with a cover, a spout attached to and projecting upwardly from said cover, two valves on the spout, one of said valves being caused to simultaneously open while the other valve closes and vice versa, a handle attached to the sugar bowl and means on the handle for conveniently operating said valves with one hand.



2,005,920
SLED BRAKE
Frank Toriello and Angelo Toriello, Hackensack, and Adolph G. Schroeder, Teaneck, N. J.
Application June 1, 1934, Serial No. 728,590
1 Claim. (Cl. 188—8)

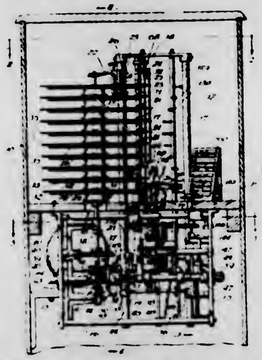
In a sled including a top structure, runners and brackets connecting the runners with the top structure, a transversely extending bar having its ends pivotally supported by a pair of the brackets, a plate connected with the intermediate part of the bar, a plurality of teeth carried by the plate and extending rearwardly therefrom, a spring connecting the plate with a part of the top structure for normally holding the parts in a position with the teeth extending upwardly and rearwardly, a crank extending from the bar, a crank shaft extending transversely under the forward part of the sled, a link connecting the crank of said shaft with the first mentioned crank, a handle connected with the crank shaft, and a downwardly and rearwardly

sloping guard connected to an under part of the top structure and against which the rear ends of the teeth bear when the parts are in inoperative position.

2,005,921
BUILDING CONSTRUCTION
Emil A. Reither, Aitkin, Minn.
Application May 28, 1934, Serial No. 728,016
6 Claims. (Cl. 20—2)

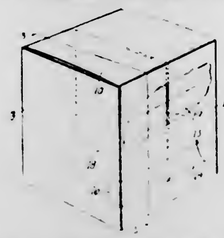
1. A building construction comprising at least two layers of logs, one superimposed on the other in the form of an enclosure, confronting pairs of logs in each layer having mortises to receive the tenon ends of the remaining logs of the respective layer thereby to make corner joints, the logs of one layer having grooves communicating and crossing at the corners, the logs of the other layer having tongues interengaging with the grooves and forming keys especially at the corner joints.

2,005,922
RESISTANCE ELEMENT AND METHOD OF MAKING SAME
Erwin R. Stoekle, Milwaukee, Wis., assignor to Central Radio Laboratories, Milwaukee, Wis., a corporation of Wisconsin
Application November 18, 1929, Serial No. 407,840
Renewed August 18, 1933
12 Claims. (Cl. 201—76)



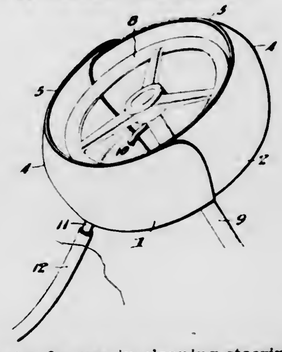
7. The method of making an electrical resistance element which consists in spraying molten metal on the element, the ends of the element being exposed longer to the spray than the intermediate portion of the element so as to provide metallic coatings over the ends of the element and isolated areas of metal elsewhere on the surface of the element to afford a variable resistance therefor.

8. An electrical resistance element comprising a body composed of a high resistance material



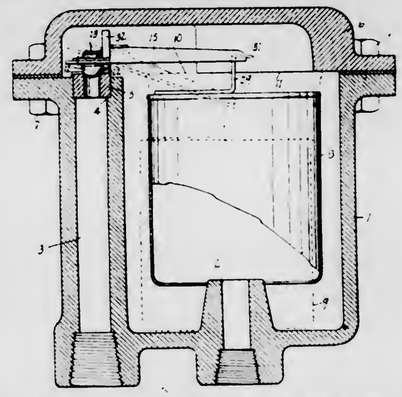
and having a contact surface, and relatively small particles of metal of good electrical conductivity adhering to and wholly supported by the body at said surface, said particles being confined to said surface and distributed thereover in isolated relation.

2,005,923
SELECTIVE AUTOMATIC PHONOGRAPH
Russell I. Wilcox, Chicago, Ill., assignor of one-half to Justus P. Seeburg, Chicago, Ill.
Application July 3, 1933, Serial No. 678,753
13 Claims. (Cl. 274—10)



3. A selective automatic phonograph comprising means for supporting in superposed spaced relationship a plurality of phonograph records, means for rotating said records, a player arm adapted selectively to cooperate with said records, mechanical means adapted to raise and lower said arm past a plurality of records, selector means adapted to limit the raising of said arm to effect the playing of a certain record, and manually operated means for actuating said selector means to effect the playing of a desired record, said mechanical means being resilient to permit arrest of said arm in cooperative relation with any of said records.

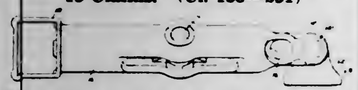
2,005,924
DISPENSING CARTON
Dorian M. Wilson, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich.
Application December 15, 1932, Serial No. 647,372
1 Claim. (Cl. 229—17)



A dispensing carton comprising front, rear and end side walls, the front wall having parallel slits extending horizontally across the same, the ends of the slits being connected by a segmental series of perforations in the end walls providing breakout portions facilitating the removal of the portion of the front wall between the slits to provide a horizontal discharge opening.

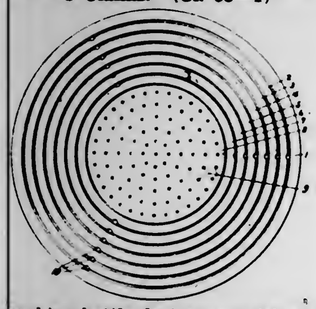
2,005,925
DEVICE FOR USE IN CLEANING STEERING WHEELS
Alvin Dean Zook, Pueblo, Colo.
Application May 31, 1934, Serial No. 728,416
10 Claims. (Cl. 15—257)

1. A device for use in cleaning steering wheels comprising, a casing portion large enough to surround the rim of the wheel and be spaced therefrom to permit access thereto for washing purposes, and means to hold said casing portion in place.



2,005,926
STEAM TRAP
Adam E. Armstrong, Three Rivers, Mich.
Application June 15, 1933, Serial No. 675,928
15 Claims. (Cl. 137—103)

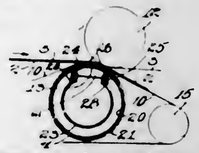
1. The combination with a float chamber provided with an inlet at the bottom and a discharge at the top having an annular upwardly facing valve seat, of an inverted bucket-type float having a central upwardly projecting arm thereon provided with a lateral projection at its upper end, a valve lever having an opening at its outer end through which said arm is disposed for vertical movement, the laterally projecting portion of the arm constituting a stop coacting with the lever, a fulcrum member for said lever having a plurality of fulcrums with which the lever successively coacts on the opening movement of the lever, said fulcrum member having upwardly projecting arms between which the lever is disposed, the lever having laterally projecting stops coacting with said arms when the lever is in valve closing position, and a spherically curved



valve carried by said lever and arranged thereon to coact with said valve seat and positioned close to the inner fulcrum.

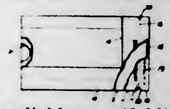
2,005,927
BRAKE BEAM FULCRUM
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application March 17, 1933, Serial No. 661,220
13 Claims. (Cl. 188—231)

1. In combination, a brake beam fulcrum having an aperture forming a pivotal seat for a third point support, a third point support secured to said seat, said fulcrum having an aperture therein adjacent said first-mentioned aperture forming a substantially enclosed rod seat, a portion of the wall of said rod seat being omitted to provide clearance for pivotal movement of said third point support.



2,005,928
COOKING KETTLE DEVICE
Peter Beghetti, San Francisco, Calif.
Application July 3, 1933, Serial No. 678,911
3 Claims. (Cl. 53—1)

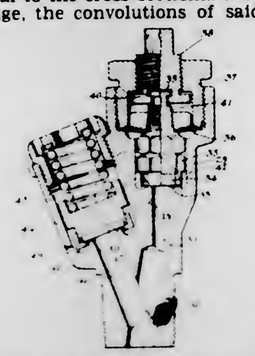
1. A cooking kettle device comprising a central raised false bottom, and surrounding said false bottom a series of rings of large diameter round wire arranged to lie substantially flat against the inner bottom of the kettle, said rings arranged with a slight space between each of less width than the thickness of the wire.



2,005,929
PAPER MAKING APPARATUS AND PROCESS
Earl E. Berry, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application August 18, 1932, Serial No. 629,265
4 Claims. (Cl. 92—38)

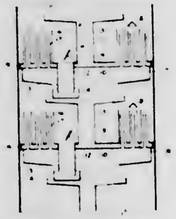
1. In combination with a paper making machine of the Fourdrinier type including the usual forming wire and partially formed paper web thereon trained around the couch roll, a suction roll contacting the web on the lower run of the wire, a pickup felt for receiving the web from the forming wire as it passes over the suction roll, means for directing said pickup felt over the suction area of the suction roll so that said felt is subjected to suction before contacting the web, an upper roll, located within the loop of the forming wire cooperating with the suction roll to aid in the transferring of the web to the pickup felt, means for directing said web and pickup felt to the drying section of the paper machine, a drying cylinder, and a suction roll cooperating therewith for transferring the web from the felt to said drying cylinder.

2. In the process of transferring a paper web from the forming wire of a paper machine to a pickup felt, the step of first subjecting the pickup felt to suction to dry the felt and then bringing said felt into contact with the paper web without interrupting the suction.



2,005,930
MANIFOLDING RECORD
Archie M. Bevier, Elmira, N. Y.
Application June 1, 1932, Serial No. 614,689
Renewed November 28, 1934
6 Claims. (Cl. 282—22)

1. A unitary pliable manifolding assembly including, in combination, a plurality of record leaves and at least one transfer leaf arranged in superposed transfer relation with each other, two of said record leaves including a single sheet folded along a transverse line positioned at the top or forward end of the assembly, and forming an outer envelope within which the transfer leaf is enclosed, said transfer leaf having attachment at a marginal part thereof with said sheet toward the top end of the assembly, the attached margin of said transfer leaf being positioned within the fold of said single sheet and adjacent the fold line of the latter, said record leaves having transverse weakened severance lines spaced inwardly a short distance from said fold line and positioned inwardly beyond said attachment of the transfer leaf and providing between the severance and fold lines a binding stub to which the top end of the transfer leaf is attached, said transfer leaf being unweakened corresponding to the severance lines of the record leaves to facilitate selective severance of the leaves from the stub.

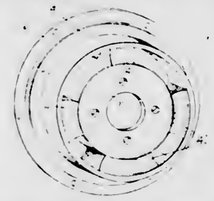


2,005,931
SAFETY VALVE
William C. Buttner, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a corporation of Illinois
Application July 8, 1933, Serial No. 679,542
2 Claims. (Cl. 277—55)

1. In a safety valve of the class described, a body having a chamber therein, a valve seat at one end of said chamber, said body having an inlet passage opening through said valve seat and adapted to communicate with a fluid container, a polygonal valve member in said chamber and engageable with said valve seat, the apices at the junctures at the sides of said valve member engaging the wall of the chamber in line contact to guide the valve member in movement thereof toward and away from the valve seat, a cap having a depending hollow boss screwed into the outer end of said chamber to be tightly retained in position, and a spring extending into said hollow boss and urging said valve member into engagement with said valve seat and adapted to yield when a predetermined pressure is impressed on the valve member to permit disengagement of the valve member from the valve seat and escape of fluid from the container, the sides of said valve member being spaced from the wall of said chamber sufficiently to afford a passage through said chamber about said valve member of a cross-sectional area at least equal to the cross-sectional area of said inlet passage, the convolutions of said spring be-

ing adapted to engage one another to limit the movement of said valve member away from said valve seat, the inner end of the boss on said cap being beveled so that when the convolutions of said spring engage one another the passage between said boss and said valve member will be at least equal to the cross-sectional area of said inlet passage, said cap having a plurality of openings therein of an aggregate size at least equal to the cross-sectional area of said inlet passage and having another opening therein communicating with the interior of said spring to vent the interior of said spring to the atmosphere when the convolutions of the spring engage one another.

2,005,932
FRACTIONATING PROCESS AND APPARATUS
Samuel C. Carney, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application May 25, 1931, Serial No. 539,718
15 Claims. (Cl. 202—40)

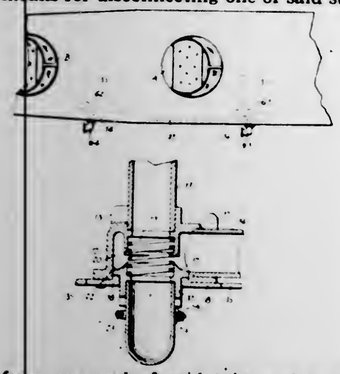


12. In a process of rectification of liquids wherein continuous streams of vapor and condensate are passing through a series of zones of gradually changing temperature the steps comprising: directing the stream of condensate in a zone into a confined space and out of contact with vapor in the same zone, continuously advancing the condensate upwardly into indirect heat exchange relationship with vapor passing upwardly through the zone, then bringing the heated condensate into direct contact with the vapor and passing the condensate to the next zone below.

2,005,933
CONTAINER FOR TOILET AND THE LIKE PREPARATIONS
Elsie May Carter, Ilford, England, assignor to Yardley & Company Limited, London, England, a British company
Application July 19, 1934, Serial No. 735,926
In Great Britain May 10, 1933
9 Claims. (Cl. 215—43)

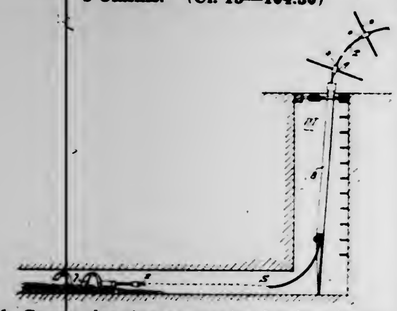
1. In a container for toilet preparations which have a deleterious effect on metal, a closure cap comprising an inner lining consisting of a substantially rigid, non-metallic substance adapted to resist the chemical action of the contents of a container, and an external metallic sheath covering said lining, said sheath having a roughened inner surface adapted to ensure adherence of the material of said lining.

2,005,934
ELASTIC CUSHION MOUNTING
Andrew G. Carter, Grand Rapids, Mich.
Application December 29, 1932, Serial No. 649,290
4 Claims. (Cl. 248—7)



4. In an elastic cushion mounting for a motor, the combination of an outer rigid member, an inner rigid member embraced by said outer member in spaced relation thereto, a resilient rubber cushion disposed between said rigid members and bonded thereto to connect and unite the same and support and hold a motor and insulate from vibrations of such a motor, said cushion being so proportioned that its side and top portions are of smaller size than the bottom portion but are of sufficient size to resist motion while being small enough to transmit the minimum vibration whereby the motor is supported with sufficient rigidity and with a minimum of transmission of vibration through the mounting.

2,005,935
MEANS FOR INTERCOMMUNICATION
Charles H. Colvin, New York, N. Y.
Application April 27, 1933, Serial No. 668,182
12 Claims. (Cl. 243—19)



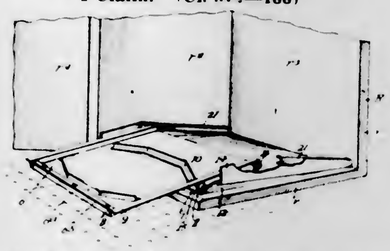
1. In combination, a conveyance tube, a suction tube for each end of said tube, a carrier, and

valve means for disconnecting one of said suction

tubes from one end of said tube and to admit said carrier to such end of said conveyance tube.

2,005,936
FLEXIBLE-ROD, SEWER CLEANING APPARATUS
Hubert R. Crane, Los Angeles, Calif.
Application March 26, 1934, Serial No. 717,387
3 Claims. (Cl. 15—104.30)

1. Sewer cleaning apparatus having, in combination, a series of aligned flexible rods, a plurality of couplers connecting the rods for two way rotation of the series of rods, and a plurality of readily detachable wrenches locked to spaced ones of the couplers to apply torque to the series of rods in either direction, at least one of the said wrenches being intermediate the ends of the series of rods.



2,005,937
DETACHABLE GATE
Forrest W. Dennison, Beloit, Wis., assignor to Taylor Freeser Corporation, Beloit, Wis., a corporation of Delaware
Application May 11, 1933, Serial No. 670,434
3 Claims. (Cl. 251—19)

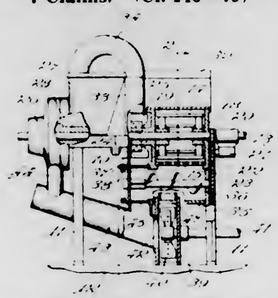
3. In combination with a spout having a port, a pair of resiliently mounted studs on said spout positioned at opposite sides of the port and provided with enlarged heads, and a gate having a handle and a pair of spaced apart slots opening to the lateral edges of said gate, one slot being engageable under one stud head to pivotally connect the gate to the spout and the other slot being arranged on an arc of a circle concentric with said pivot for slidably passing under the head of the second stud only as the gate approaches and reaches port closing position, the gate being removable from the spout without preliminary detachment of any other parts merely by rotating it to open position and disengaging the first slot

from the pivot stud, said gate being retained on said spout when in open position solely by the pivot stud.

2,005,938
RACK
Harry D. Graves, Chicago, Ill.
Application May 1, 1933, Serial No. 668,673
1 Claim. (Cl. 312—188)

In a rack of the character described, the combination of a rectangular supporting structure provided with a pair of laterally spaced rollers at the front end thereof, a rectangular platform provided with container-retaining means on the top face thereof and having out-turned flanges along its side margins resting upon the rollers and coacting therewith to support the platform so that it is shiftable bodily back and forth between a normal position over the structure and a position in front of the structure wherein it is accessible for lifting the container on or off it, and means for supporting the rear end of the platform and automatically tilting the platform downwardly when it is shifted into position in front of the structure so as to facilitate lifting the container on or off the platform, comprising a pair of laterally spaced, oppositely facing, inclined channel bars on the supporting structure, and a pair of rollers mounted on the rear corners of the platform and fitting in and coacting with the channel bars, said bars being so arranged and angled on the supporting structure that the rollers on the rear corners of the platform are located in the rear ends thereof when the platform is in its normal position and the platform is supported with the rear end thereof slightly lower than its front end.

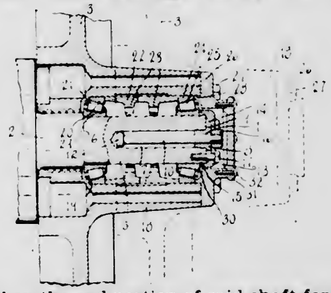
2,005,939
REFRIGERATOR RACK
Charles L. Hibbard, Jr., Brookline, Mass., assignor to Old Colony Distributing Company, Inc., Boston, Mass., a corporation of Massachusetts
Application May 13, 1933, Serial No. 670,853
3 Claims. (Cl. 211—74)



1. A rack adapted to be suspended from a refrigerator shelf and comprising a support having crossed wires secured together, some of said wires cooperating with others extending transversely to them to form a plurality of separate pockets each adapted to receive and hold a bottle in a reclining position, said pockets lying side by side parallel to each other and having a dividing means between them to hold adjacent bottles

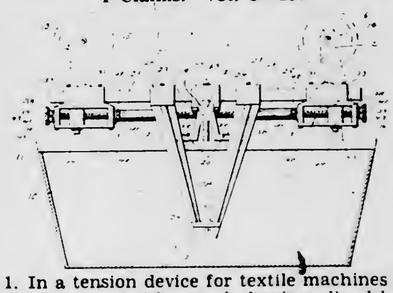
separated from each other, and arms extending upwardly from said support and provided with

hook portions at their upper ends for engaging said shelf and suspending the rack therefrom.



2,005,940
ROUGHAGE MILL
John Holland-Letz, Crown Point, Ind., assignor to The Letz Manufacturing Company, a corporation of Indiana
Application August 5, 1932, Serial No. 627,555
7 Claims. (Cl. 146—79)

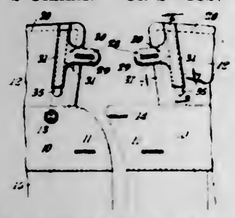
3. In a machine of the class described comprising a frame, a cutting mechanism mounted on said frame, a grinding mechanism mounted on said frame, a shaft common to said grinding mechanism and said cutting mechanism, a conveyor trough mounted below said cutting mechanism, a conveyor screw mounted in said trough for conveying the material laterally with respect to said cutting mechanism, an elevating fan mounted on said shaft for elevating the material from said trough to said grinding mechanism, a valve for controlling the communication between said trough and said elevating means, a mixing fan mechanism located directly below said trough, an inclined conduit extending from one side of said mixing fan mechanism and communicating with said grinding mechanism and with one end of said trough, and a valve for controlling communication between said trough and said inclined conduit whereby the material may be diverted from said mixing fan mechanism into said grinding mechanism.



2,005,941
FLYWHEEL MOUNTING
Gustaf O. Johnson, Elkhart, Ind., assignor to Loshbough-Jordan Tool & Machine Co., Elkhart, Ind.
Application December 5, 1934, Serial No. 756,115
20 Claims. (Cl. 308—211)

1. The combination of a shaft having an end portion provided with an annular shoulder at its inner end and an axial bore, a nut threaded in the outer end of said bore and having an axial hole, a pin extending through said hole and having a stop adapted to coact with said nut to limit the outward movement of the pin, an end cap threaded to the outer end of said pin and having an inturned rim flange fitting over the outer edge of said shaft, cap screws connecting said end cap to the outer end of said shaft, a flywheel having a hub provided with an internal annular flange spaced from its outer end, an inner roller bearing having an outer ring abutting said hub flange, a sleeve telescoped within said hub with its inner end abutting said ring and having spaced internal annular temporary supports normally spaced from said shaft, an outer roller bearing having an outer ring abutting the outer end of said sleeve, an annular end member bolted to the outer end of said hub and having an inwardly extending annular flange abutting the outer ring of said outer roller bearing and acting to clamp said sleeve between said outer rings, said inner and outer roller bearings having inner rings

sleeved on the end portion of said shaft for longitudinal movement, the inner ring of the inner roller bearing abutting said annular shoulder and the inner ring of the outer roller bearing abutting the inturned rim flange of said end cap, and a closure removably mounted on the said annular end member, said cap screws being made accessible for releasing said end cap from said shaft by the opening of said closure, the release of said end cap permitting the flywheel to be moved longitudinally of the shaft, such movement being limited by the engagement of the stop of said pin with said nut to prevent the accidental complete withdrawal of the flywheel from the shaft, said internal annular supports coacting with the shaft to support the flywheel when the latter is partially withdrawn to such an extent that the inner ring of the outer roller bearing is clear of the outer end of the shaft.



2,005,942
TENSION DEVICE FOR TEXTILE MACHINES
St. Clair Lake, Poughkeepsie, N. Y.
Application January 26, 1934, Serial No. 708,379
4 Claims. (Cl. 8—19)

1. In a tension device for textile machines and in combination with a tank, having alined bearings mounted thereon, of a frame mounted there-

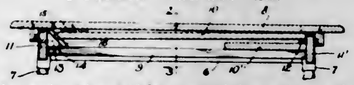
in and capable of being rocked, a depending portion attached to said frame within said tank, a transverse roller carried thereby and having free rotary movement, bearing members mounted on the outer ends of said frame and formed with bearings, transverse shafts mounted therein carrying guide rollers, bearing blocks adjustably mounted in said members and means for adjusting the same, transverse tension bars mounted in said bearing blocks adjacent said guide rollers and means for bowing or curving said tension bars with relation to said guide rollers.

2,005,943
COLLAR
Edward Lind and David Feigenbaum, New York, N. Y.
Application January 30, 1933, Serial No. 654,212
2 Claims. (Cl. 2—132)

1. A collar comprising a neckband and a turned-down portion, and a combined buttonhole tab and pocket-forming element attached to the said turned-down portion adjacent the meeting edges thereof, said combined tab and pocket-forming element comprising a substantially cross-shaped single blank folded upon itself to produce a T-shaped member the head of which becomes the pocket and the leg of which becomes the buttonhole tab.

2,005,944
STABILIZED FORM OF PHOSPHORUS PENTOXIDE
Boris Malishev, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 14, 1932, Serial No. 598,887
5 Claims. (Cl. 23—243)

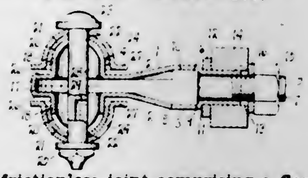
1. Stabilized phosphorus pentoxide comprising: Phosphorus pentoxide incorporated with a relatively inert binder of the class consisting of fats, waxes, resins, gums, tars, pitches, asphalts and heavy oils.



2,005,945
EMULSION PRINTING INK AND METHOD OF MAKING SAME
Earl H. McLeod, Rutherford, N. J., assignor to The International Printing Ink Corporation, New York, N. Y., a corporation of New York
No Drawing. Application December 30, 1929, Serial No. 417,589
3 Claims. (Cl. 134—36)

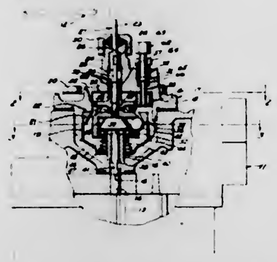
1. An emulsion printing ink, comprising a stable aqueous emulsion that does not tend to oxide objectionably on standing in containers, is readily miscible with additional water for which it has a remarkable affinity without objectionable thinning down of the mixture; which ink, when applied to a paper surface possesses quick drying properties because of the tendency of the volatile ingredients thereof to evaporate and to penetrate into the surface to which it is applied owing to the peculiar affinity of the paper therefor, thereby materially increasing the permissible speed of application of such ink to a paper surface; which ink does not objectionably penetrate through paper to which it is applied; and which ink, when an embossing operation is employed, has no tendency to adhere to the embossing rollers; and which ink wipes readily and does not tend to de-emulsify on standing, said ink comprising essentially a pigment and a vehicle, the latter containing a resinous binder including a water-soluble resin soap and an unsaponified resin, a volatile hydrocarbon distillate that is a solvent for said resin and water, the amount of the resinous binder present in the vehicle being at least 20%, the amount of the hydrocarbon distillate present being at least 15% and the amount of the water present exceeding 10%, by weight, of the vehicle of the ink.

2,005,946
METHOD OF MAKING ACETALDEHYDE
Russell W. Millar, Berkeley, and Leo V. Steck, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 2, 1931, Serial No. 572,732
10 Claims. (Cl. 260—139)



1. The process of preparing acetaldehyde from acetylene which comprises hydrating acetylene with an acid solution containing free acid of less than 20% strength and not substantially less than 22.4%, by weight of an acid salt of the free acid employed with a member of the class consisting of alkali-metals and ammonia in the presence of a mercury compound.

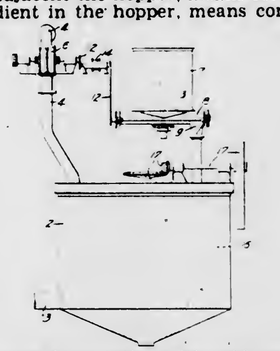
2,005,947
EXTENSION TABLE
Charles J. Miller, Chicago, Ill.
Application October 31, 1934, Serial No. 750,781
4 Claims. (Cl. 311—48)



1. An extension table comprising a top, a frame, a folding filler leaf adapted to be arranged in storage position upon the frame and beneath the top, and inclined means on the frame engaging one end of the filler leaf in storage position whereby the force of gravity causes said leaf to ride down the incline until the opposite end of said leaf engages the frame and wedges the leaf between the inclined means and the frame.

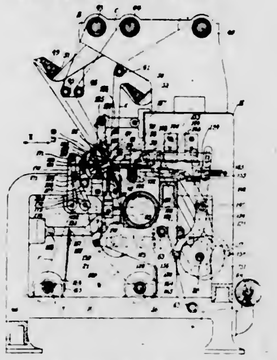
2,005,948
BALL JOINT ELEMENT
Richard S. M. Mitchell, Detroit, Mich.
Application February 8, 1932, Serial No. 591,733
2 Claims. (Cl. 287—100)

2. A frictionless joint comprising a flexible inner joint member having opposed hollow semi-spherical portions at its end forming a large central lubricant chamber and provided with opposed central openings on a common axis extending transversely of the longitudinal axis of the member and longitudinal relatively narrow lubricating slots radiating from said openings, a flexible outer joint member having semi-spherical socket portions at its end disposed over opposite sides of said inner portions and having central openings alined with the corresponding central openings therein, and a bolt fitting exactly through said central openings whereby said joint members are free at their joint for movement only in the plane of their longitudinal axes, but are capable of flexing in other directions by virtue of their inherent flexibility.



2,005,949
VERNIER FOR METER REGISTERING MECHANISM
Porter S. Morgan, New York, N. Y., assignor, by direct and mesne assignments, to Liberty Share Corporation, Buffalo, N. Y.
Original application June 3, 1932, Serial No. 615,166. Divided and this application August 10, 1934, Serial No. 739,285
3 Claims. (Cl. 74—281)

1. In a change speed drive mechanism, a body, a race member secured to the body and having an internal conical face, a cone adapted to be secured to a driving shaft and having a conical face, a plurality of balls between the race member and cone, a cup removably secured to the body, a spring having one end mounted on the cup, a thrust bearing interposed between the remaining end of the spring and said cone, said spring retaining the cone in frictional engagement with the balls, a cage adapted to be connected to a driven shaft and formed with pockets receiving the balls, and means mounted on the body for adjusting the cage axially relative to the race and cone.

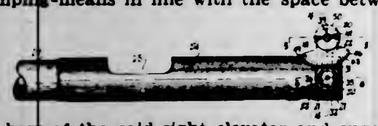


2,005,950
APPARATUS FOR PROPORTIONING INGREDIENTS
Carl J. Moroney, San Mateo, and William O. Witherspoon, Burlingame, Calif.
Application May 1, 1933, Serial No. 668,804
1 Claim. (Cl. 137—165)

Apparatus for mixing and proportioning a dry ingredient with a fluid, comprising a mixing tank, stirring means in the tank, a discharge duct adjacent the bottom of the tank, a constant displacement pump connected with a supply of the fluid and discharging into the top of the tank, means for driving the pump, a hopper for holding a supply of the dry ingredient and arranged above the tank, a duct connected with the hopper and depending downwardly with its discharge end adjacent the top of the tank, a feed screw in the duct adjacent the hopper, means for stirring the ingredient in the hopper, means connecting

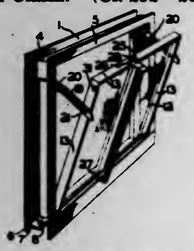
the feed screw for rotation with said pump, and means interposed in the connecting means for varying the speed of the feed screw relative to said pump.

2,005,951
MANUFACTURE OF FABRICS
James Morton, Carlisle, England
Application June 10, 1933, Serial No. 675,185
In Great Britain June 25, 1932
30 Claims. (Cl. 66—85)



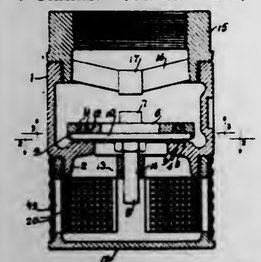
1. A fabric manufacturing machine adapted to receive a sheet of stuffer warps and comprising guides for leading-in a sheet of pile warps, mechanism for imparting pile-looping movements to said guides, means for supplying wefts to opposite faces of said stuffer and pile sheets, mechanism for producing chains of stitches which extend along spaces between groups of said stuffer and pile warps and inter-bind the wefts, stationary hooks around which the weft-bound pile warps are looped during said pile-looping movements, knives provided in combination with said hooks, and means for moving said knives to cut the looped pile warps.

2,005,952
ADJUSTABLE SIGHT FOR FIREARMS
Harold F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Incorporated, New Haven, Conn., a corporation
Application June 9, 1933, Serial No. 675,065
7 Claims. (Cl. 33—56)



1. In an adjustable sight, the combination with a thin-walled tubular member of a firearm having a cylindrical outer surface with an integral lug thereon flanked by cutaway portions; of a

sight-elevator having two spaced-apart bars straddling the said lug and extending into the cutaway portions flanking the same; releasable clamping-means in line with the space between

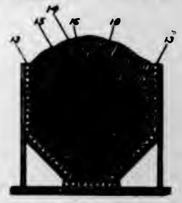


the bars of the said sight-elevator and engaged with the lug on the cylindrical surface of the said tubular member for securing the said elevator thereto; and a sight carried by the said elevator.

2,005,953
WINDOW LOCK AND HANDLE
Hiram W. Nicles, Muskegon Heights, Mich., assignor to Vento Steel Sash Company, Muskegon Heights, Mich., a corporation of Michigan
Application February 9, 1931, Serial No. 514,342
1 Claim. (Cl. 292—202)

In a latch construction adapted for use with a bodily movable sash which has a mullion thereacross, the combination of, a bail extending entirely across the sash and means at each end of the bail for pivoting the same onto the sash spaced from the ends of the mullion whereby the bail may be swung against the mullion for the purpose described, said bail being so formed as to serve as a handle member along substantially its entire length, said bail being of channel shape and adapted to be telescoped over the mullion when in inoperative position for the purpose described.

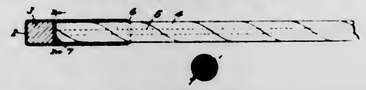
2,005,954
FOOT VALVE
Carl A. Petersen and Anker L. Christy, Chicago, Ill.
Application May 27, 1932, Serial No. 613,976
7 Claims. (Cl. 251—127)



6. In a foot valve mechanism, a casing having a passageway therethrough, a valve seat comprising a plurality of ribs around the passageway, and a valve consisting of a metal disc and a resilient disc adapted to engage the ribs for closing the passageway, said metal disc having holes therein for admitting pressure fluid to the resilient disc above the ribs.

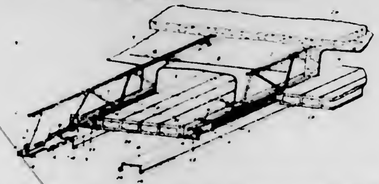
2,005,955
WELL PACKER
Roy R. Renouf, Los Angeles, Calif., assignor to Olympic Engineering Corporation, Los Angeles, Calif., a corporation of California
Application November 28, 1933, Serial No. 700,088
9 Claims. (Cl. 166—12)

7. In a packer, a mandrel, a packing member and slip cone assembly slidably and rotatably mounted upon said mandrel, slips on said slip cone, a slip-anchoring sleeve slidably mounted on said mandrel below said slip cone, spring casing-engaging means on said slip anchoring sleeve, means comprising a pin on said mandrel and a bayonet slot on said slip-anchoring sleeve for limiting movement of said sleeve with respect to said mandrel, a slip collar rotatably mounted on said sleeve for longitudinal movement therewith, and means connecting said slip collar to said slips, cooperating stop means on said mandrel and packing member for limiting downward movement of said mandrel with respect to said packing member, and other means connecting said slip ring to said packing member for limiting upward movement of said packing member with respect to said slip ring.



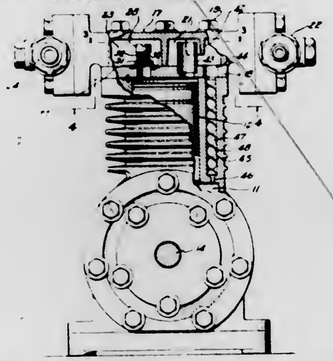
2,005,956
METHOD OF MAKING ABRASIVE METAL CARBIDES AND AN APPARATUS THEREFOR
Raymond R. Ridgway, Niagara Falls, N. Y., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application December 2, 1931, Serial No. 578,547
13 Claims. (Cl. 204—62)

1. The method of making abrasive metal carbide comprising the steps of providing partially converted material containing said carbide derived from a preceding furnace run and forming therefrom a resistance core located in the central high temperature zone of a resistance furnace, surrounding said core material with a charge containing uncombined oxide of the metal and carbon in suitable proportions for the reaction



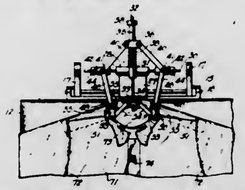
and passing an electric current through the core and thereby developing a temperature capable of forming said carbide from the charge.

2,005,957
BLASTING CAP
Frank Rosenthal, San Andreas, Calif.
Application June 18, 1934, Serial No. 731,045
8 Claims. (Cl. 102—9)



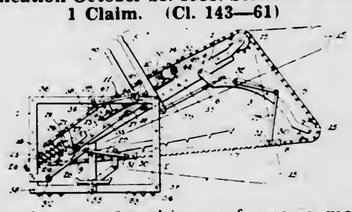
1. A fuse cap comprising a shell containing a quantity of a detonating compound compacted into one end and presenting a surface adapted to contact the end of the powder train of a fuse inserted into the shell, and said surface of the compound formed with a gas escape channel leading to the wall of the shell.

2,005,958
TILE
Peter H. Sereff, Denver, Colo.
Substitute for abandoned application Serial No. 505,827, December 31, 1930. This application March 13, 1933, Serial No. 660,566
9 Claims. (Cl. 72—66)



5. In a building unit, in combination with reenforcing units, ceiling members, each having on one side along each edge a groove and a tongue, and means supported by the reenforcing units and engaging said tongues to support the ceiling members.

2,005,959
REFRIGERANT COMPRESSOR
Lawrence C. Smith, Kenmore, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y.
Application May 10, 1933, Serial No. 670,313
4 Claims. (Cl. 230—172)

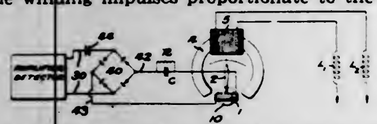


1. In a refrigerant compressor the combination of a cylinder block, a crankcase, a head for the cylinder block formed with input and output ports, a valve on each port, an input chamber formed in the head and communicating with said input port, an oil passage formed in the block and connecting the input chamber to the crankcase, and a baffle in the input chamber disposed about the input port to prevent oil entry therein.

2,005,960
GARMENT FINISHING APPARATUS
James W. Steele, Kansas City, Mo.
Application August 10, 1933, Serial No. 684,530
18 Claims. (Cl. 68—1)

1. Garment finishing apparatus comprising a table providing an ironing surface, garment shoulder positioning members mounted in position to be received within the collar opening of the garment, the length of each of said members being sufficient to project across the corresponding shoulder portion and an appreciable distance past the corresponding shoulder and sleeve connecting seam of the garment, and means for pivotally mounting said members for swinging movement in opposite directions for engagement with the interior shoulder and sleeve lines of the garment.

2,005,961
PULL AND DRAG-SAW MACHINE
Thomas Telesky, Amsterdam, N. Y.
Application October 25, 1933, Serial No. 695,147
1 Claim. (Cl. 143—61)



In a drag saw machine, a frame, a member rigidly secured thereto and extending therefrom, a sprocket mounted at each end of the member, a beam pivoted at its one end near the extended end of the member and supporting a sprocket at its free end, a chain trained over the sprockets and having its ends connected to the ends of a drag-saw blade, means to pivot the beam to adjust its angular relation to the member, and means to reciprocate the chain.

2,005,962
ELECTROMOTIVE FORCES COMPARING DEVICE
Haig Antranikian, Paris, France
Application June 27, 1933, Serial No. 677,949
10 Claims. (Cl. 172—245)

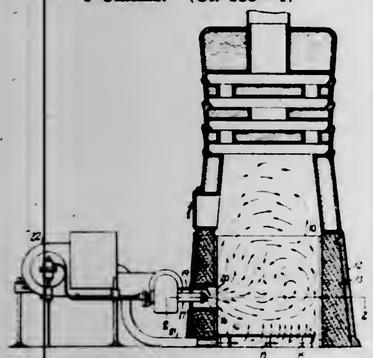
10. In combination, a circuit subject to rectified periodical currents having two alternate parts which may vary relatively to each other, a movable winding for indicating differences between said alternate parts, a condenser in series

with the movable winding, means connecting said movable winding and the condenser in series to said circuit, means for discharging the condenser periodically, and means for giving to the movable winding impulses proportionate to the currents in the same and in one direction during the passage of the currents due to one of said parts and in the opposite direction during the passage of the currents due to the other of said alternate parts.

2,005,963
TURN SIGNAL

Einar S. Axelberg, Minneapolis, Minn., assignor of one-half to Thomas O. Ormbreck, St. James, Minn.

Application April 30, 1934, Serial No. 723,117
3 Claims. (Cl. 177—339)



1. A turn signal for vehicles comprising a casing adapted to be mounted on a vehicle and having an open face, a direction indicating stencil partially closing said face, said stencil having an opening therethrough, a colored glass at one side of said stencil, said glass having an opening registering with a portion of said first mentioned opening, a first electric bulb mounted in said casing behind said glass and stencil, a second electric bulb mounted in said casing and disposed in said openings and means for simultaneously establishing a continuous electrical circuit to said first bulb and an intermittent electrical circuit to said second bulb.

2,005,964
OIL BURNER

Raymond P. Babcock, West Hartford, Conn.

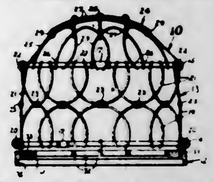
Application May 2, 1934, Serial No. 723,476
6 Claims. (Cl. 158—4)

1. An oil-burning apparatus including: a wall surrounding a combustion chamber; an atomizing nozzle arranged to deliver a jet of substantially air-free atomized oil approximately horizontally into said combustion chamber; electric ignition means located immediately adjacent the jet of atomized oil delivered by the said atomizing nozzle; and air-delivery means arranged to deliver air under pressure into said combustion chamber upwardly toward the atomized oil and only at locations at least one third the maximum horizontal dimension of the combustion chamber horizontally away from a vertical line touching the delivery end of the atomizing nozzle; and the portion of the combustion chamber adjacent said nozzle and extending to the nearest location of air-under-pressure delivery being substantially sealed against the admission of air.

2,005,965
AIRFOIL CONTROL MEANS

George E. Barnhart, Pasadena, Calif.

Application July 5, 1933, Serial No. 679,015
35 Claims. (Cl. 244—29)

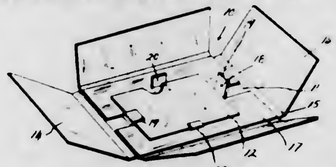


7. For use in controlling an airplane the combination of: a cambered airfoil; a set of longitudinally extending vanes mounted on the top surface of said airfoil; another set of longitudinally extending vanes mounted on the bottom surface of said airfoil, all of said vanes normally forming segments of the corresponding airfoil surfaces, and the vanes in each set being hinged to said airfoil at their adjacent edges so that the leading edge of the forward vane in each set is adapted for outward movement into the airstream and the trailing edge of the aft vane in each set is adapted for outward movement into the airstream; and means for independently actuating said vanes.

2,005,966
ADJUSTABLE FLOWER HOLDER

Ralph G. Beagle, Pasadena, Calif.

Application September 5, 1934, Serial No. 742,738
7 Claims. (Cl. 47—41)



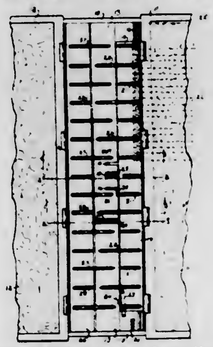
1. In a flower holder, a base, a body portion mounted on said base, said body portion including side portions and a top portion, said sides and top portion being formed to provide grill work, and means to mount said side portions to hinge.

2,005,967
PACKAGE

Kenneth D. Berdan, Detroit, Mich., assignor to Michigan Electrotype and Stereotype Company, Detroit, Mich., a corporation of Michigan

Application March 19, 1934, Serial No. 716,406
5 Claims. (Cl. 206—62)

2. A shipping case for articles comprising bottom, top and side walls defining an area within the case substantially greater than the area of the article to be shipped, and means for holding the article with the side edges thereof spaced a substantial distance inwardly from the side walls of the case, including tabs spaced inwardly from

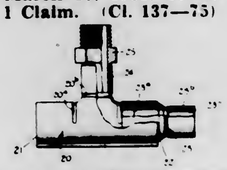


the side walls of the case and fixed in said case, said tabs being foldable over the article into engagement therewith and held in their folded positions by one wall of the case and also being so located with respect to the article as to prevent shifting movement of the same in the case.

2,005,968
VISIBLE SHIFT BINDER FOR RECORD SHEETS OR THE LIKE

Eric F. Brown, Des Moines, Iowa

Application October 6, 1933, Serial No. 692,471
9 Claims. (Cl. 129—24)

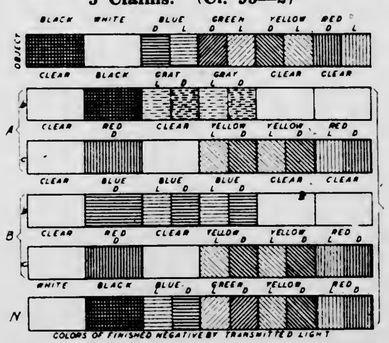


7. In a device of the class described, a binder housing, a supporting member rotatably mounted in said housing, a second supporting member rotatably and slidably mounted in said housing, arcuate tines on each of said supporting members, a finger secured to said first-mentioned supporting member and extending toward and under said second-mentioned supporting member, and a means for locking said second supporting member against movement relative to said housing.

2,005,969
PIPE FITTING

Edward S. Cornell, Jr., Larchmont, N. Y., assignor to American Radiator & Standard Sanitary Corporation, New York, N. Y., a corporation of Delaware

Application March 10, 1933, Serial No. 660,228
1 Claim. (Cl. 137—75)

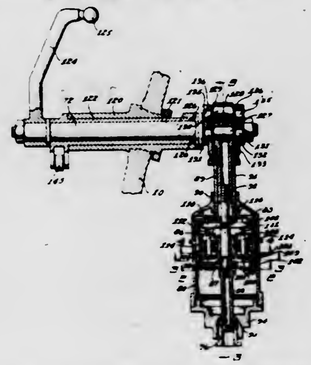


As an article of manufacture, a wrought metal fitting having a wall thickness which precludes threading and adapted to receive couplings designed for either threaded connection or sweated connection with pipe sections or for direct connection with the pipe sections themselves, said fitting being constructed and arranged to receive and have sweated thereto a pipe section either inside or overlying the outside of the fitting ends.

2,005,970
COLOR PHOTOGRAPHY

Ludwig M. Dieterich, Los Angeles, Calif., assignor to Detracolor Ltd., a corporation of Nevada

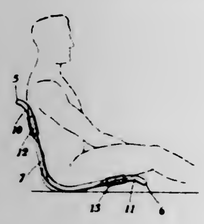
Application November 30, 1931, Serial No. 578,059
5 Claims. (Cl. 95—2)



1. A method of producing photographic images in color on a film having a plurality of different light sensitive emulsions thereon one of said emulsions being predyed the color to which it is predominantly light sensitive which incldes: exposing said film to actinic light; developing the respective latent images thereby obtained; mordanting the color in the image carried by the predyed emulsion; selectively coloring another of said images the color to which the emulsion bearing said image was predominantly light sensitive; and removing the dye from the unexposed portions of said predyed emulsion.

2,005,971
SERVO-MECHANISM

Herbert C. Edwards, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan

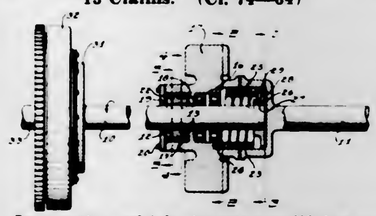


Original application March 31, 1932, Serial No. 602,233. Divided and this application August 7, 1933, Serial No. 683,976
9 Claims. (Cl. 121—41)

1. In a servo-mechanism, a cylinder having fluid inlet and outlet ports in the wall thereof, a

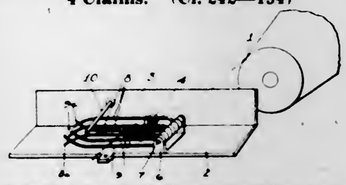
piston in the cylinder composed of three axially arranged sections having bolts for securing the same together, the central section of the piston having an enlarged passage around two of the bolts, a pair of peripheral recesses extending the length of the central section and communicating one with the cylinder inlet port and the other with the cylinder outlet port, a pair of chambers extending normal to the axis of the central piston portion through each recessed portion of the outlet recess periphery, axially extending openings in each of the end piston sections each communicating with one of the chambers communicating with the valve means in the piston controlling the passage of fluid between the outlet chambers and the openings in the end sections, manually operable means for controlling the position of the valve means, the chambers communicating with the inlet recess each being in communication with the openings in the remote end sections through means of the enlarged passages around the bolts, and actuator means connected with the piston and extending exteriorly of the cylinder.

2,005,972
BACK SUPPORT
Sidney Herbert Gallop, Cumberless, Ember Lane, Esher, England
Application October 28, 1933, Serial No. 695,585
In Great Britain November 22, 1932
4 Claims. (Cl. 5—327)



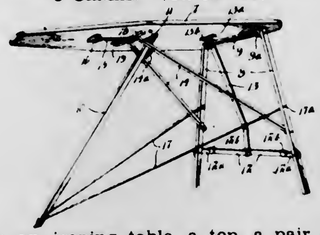
3. A legless device to aid in sitting in bed, on the floor or ground or like supporting surface, such device comprising a frame consisting of two spaced side members of approximately L-shape, the upwardly extending pair and the forwardly extending pair of legs of said L members being respectively connected together and being provided with transverse cross members forming respectively a thigh or leg engaging member and a back rest member, the back rest and thigh engaging members being spaced substantially away from the point of connection of said legs of said L members and said side memers at the point of connection between the upwardly and forwardly extending legs, each being provided with a curved rocker portion of substantial radius as compared to the length of the legs of the L members, whereby the device may be rolled over the supporting surface with an increase of the lever arm of the first-mentioned cross member and a decrease in lever arm of the second-mentioned cross member when the back rest member is moved rearwardly and the reverse when the back rest member is moved forwardly, and said frame being completely open between said cross bars and said side members so that a person can sit through the bottom and back portions of the device directly onto the supporting surface on which the device rests.

2,005,973
APPARATUS FOR LISTENING IN ON TELEPHONE CALLS
Heinrich W. Hellmann, Marienfelde-Berlin, Germany, assignor of one-fourth to Aage Gusmer, Woodbridge, N. J.
Application January 4, 1933, Serial No. 650,114
2 Claims. (Cl. 179—1)



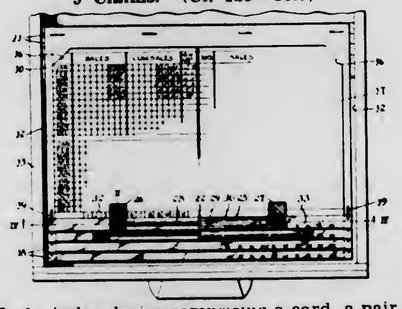
1. An attachment for telephones provided with a receiver having a magnetic distribution field, comprising a magnetic core, an induction coil associated with said core, a relatively rigid strip secured at one end to said core and extending at right angles therefrom, and clamping means carried by the other end of said strip to detachably mount the coil and core on the receiver in the magnetic field, said attachment when in applied position being movable with the receiver in the ordinary use of the telephone.

2,005,974
POWER TRANSMISSION SYSTEM
Miller R. Hutchison, Jr., New York, N. Y., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application October 24, 1931, Serial No. 570,857
13 Claims. (Cl. 74—64)



1. In a motor vehicle, torque amplifying mechanism comprising a driving member, inertia means driven thereby, a driven member, a clutch device engageable to drive the driven member, driving connections between the inertia means and the clutch, and a continuous connection around said inertia means between the driving member and the clutch.

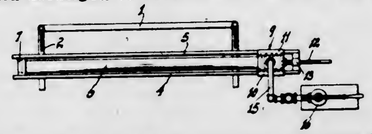
2,005,975
THREAD TENSIONING DEVICE
Frank B. Javery, Worcester, and Armon J. Javery, Oxford, Mass., assignors to Warp Compressing Machine Company, Worcester, Mass., a corporation of Massachusetts
Application July 24, 1933, Serial No. 681,856
4 Claims. (Cl. 242—154)



1. A yarn tension device comprising two sets of tension members alternately arranged with each of the members of one of said sets being separately pivotally mounted for individual movement toward and away from the members of the other set.

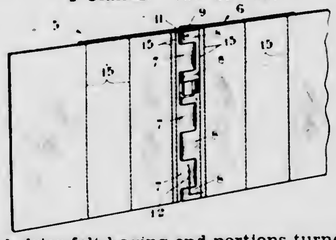
2,005,976
IRONING TABLE
Henry V. Keller, Minneapolis, Minn.
Application February 9, 1931, Serial No. 514,499
5 Claims. (Cl. 68—10)

1. In an ironing table, a top, a pair of rear legs pivoted to said top for folding movement thereagainst, a forward leg pivoted to said top forwardly of said rear legs and inclined downwardly and forwardly when the device is set up, an upper brace connecting intermediate portions of said rear legs with an intermediate portion of said top, said brace comprising an elongated section pivoted to said rear legs and extending therefrom to said top when said table is set up and a relatively short section pivoted to said first mentioned section and non-slidably pivoted to said table, said short section lying against the top when the table is set up and a pair of non-collapsible brace rods connecting said forward leg with intermediate points on said rear legs.



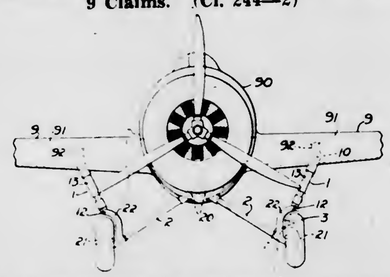
2,005,977
INDEX AND SIGNAL
Charles C. Kitchen, Toledo, Ohio, assignor to Remington Rand Inc., Buffalo, N. Y.
Application July 9, 1932, Serial No. 621,722
9 Claims. (Cl. 129—16.7)

6. An index device comprising a card, a pair of signals, means on one marginal portion of the card for slidably mounting the signals for independent movement with portions of the signals visible over different portions of the card and other portions concealed, said signals being free for signalling cooperation on one face of the card and over different and opposite sections.



2,005,978
CORE EJECTOR
Lewis A. Larson and Arthur Soll, Compton, Calif.
Application February 18, 1935, Serial No. 7,024
5 Claims. (Cl. 255—1)

1. A core ejector comprising a pair of spaced guide bars, a stationary foot ring between said bars, said foot ring being adapted and arranged to receive one end of the core barrel, a pressure head, means slidably mounting the pressure head on the guide bars, said pressure head being adapted and arranged to receive the other end of the

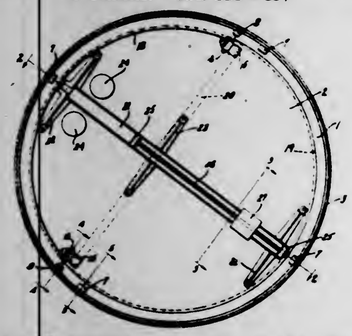


core barrel, and means to introduce pressure into said pressure head.

2,005,979
DRIER FELT FOR PAPER MAKING MACHINES
Tom Milnes, Lachute Mills, Quebec, Canada, assignor of one-half to Ayers Limited, Lachute Mills, Quebec, Canada
Application July 14, 1934, Serial No. 735,160
4 Claims. (Cl. 24—33)

3. A drier felt having end portions turned back and fastened to the body of the felt to provide integral tubular terminals, each of said terminals being slotted to provide a series of loops fitted between the loops of the remaining terminal and a pair of retaining keys passing through said loops and serving to hold them in their interfitting relation, said keys comprising two relatively thin and wide flat strips of metal flatly engaged with each other.

2,005,980
RETRACTABLE LANDING GEAR
Robert J. Minshall, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash., a corporation of Washington
Application July 12, 1933, Serial No. 680,084
9 Claims. (Cl. 244—2)



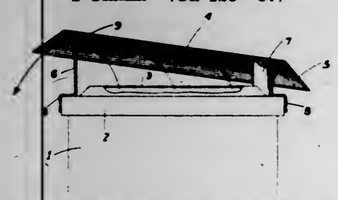
6. In combination with an airplane structure, a landing wheel, a spindle supporting the same, a bifurcated strut rigid with said spindle, one arm thereof extending inward from the base of the spindle and secured to the airplane structure, the other arm thereof projecting from the base of the spindle upward to a point adjacent to the periphery of said wheel, a vertical strut pivotally connected at its lower end to the upper end of such upwardly projecting arm, and pivotally

connected at its upper end to the airplane structure, and means to withdraw into the airplane structure the end of the inwardly projecting arm of the bifurcated strut, thereby to swing upward the landing wheel and vertical strut.

2,005,981
DRAFT REGULATOR

Clarence H. Morrow, Shaker Heights, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a corporation of Ohio

Application February 24, 1933, Serial No. 658,393
2 Claims. (Cl. 236—45)



1. In an automatic damper of the class described, and having an annular base and a shutter adapted to control the opening of said base, brace means for said shutter comprising a pair of members arranged in cruciform relation on the opposite faces of the shutter and each secured to the latter, one of said brace members being nondiametrically disposed and having bearing means at its ends arranged to mount said shutter on said base for swinging movement, the other brace member being diametrically disposed and having a weight mounted for adjustment therealong, said diametric brace member having arms extending therefrom at its ends and secured at their ends with said shutter, and also having arms opposite said other brace member and secured to the latter through openings in said shutter.

2,005,982
GAS SAVING DEFLECTOR

Bowman S. Smith, Stockton, Calif.

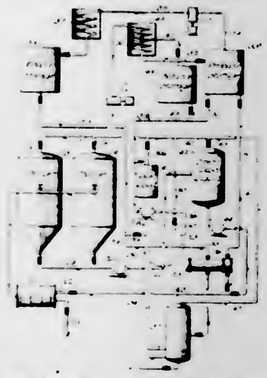
Application March 21, 1934, Serial No. 716,641
1 Claim. (Cl. 126—67)

An air deflector for the top of a circulating room heater of substantially rectangular form, which deflector comprises a deflecting plate substantially the size of the heater top, front legs depending from the plate and formed at their lower ends to removably rest on the top of the heater and overlap the front edge thereof, back legs depending from the plate, the back legs having cove shaped feet to embrace the top and adjacent side edges of the upper corners of the heater whereby such feet function to positively locate the plate in proper position on the heater and prevent lateral displacement thereof.

2,005,983
RAILWAY CAR TRUCK

Charles D. Young, Haverford, Pa.

Application November 12, 1932, Serial No. 642,331
6 Claims. (Cl. 105—197)



1. In a car truck, the combination of side frames, a bolster having vertical sliding engagement with said frames, coil springs carried in the window openings of said frames for supporting said bolster, and a leaf spring in each end of said bolster having two points of bearing contact therewith, the outer ends of said leaf springs being supported on and having non-shiftable connection with said frames.

2,005,984
DEWAXING MINERAL OILS

Chester E. Adams and Vanderveer Voorhees, Hammond, Ind., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application June 30, 1932, Serial No. 620,094
22 Claims. (Cl. 196—19)

1. The method of filtering a wax slurry to form a dry filter cake on a continuous rotary filter in a closed insulated chamber which comprises introducing a liquefied normally gaseous inert substance between said rotary filter and said chamber which vaporizes to effect refrigeration and to maintain filtering pressure and which consequently acts as a drying medium to remove liquids from the cake on the rotary filter.

3. The method of filtering and washing a wax slurry on an enclosed filter which comprises immersing the filter element in a wax slurry which is maintained under positive pressure whereby filtrate is forced through the element and a filter cake is built up thereon, and washing said filter cake with a liquid having a lower vapor pressure than the filtrate so that there will be no tendency for the filter cake to be disrupted by the expansion of wash liquid therein.

2,005,985
HOOK FASTENING FOR FISH LURES

Paul S. Bear, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a corporation of Michigan

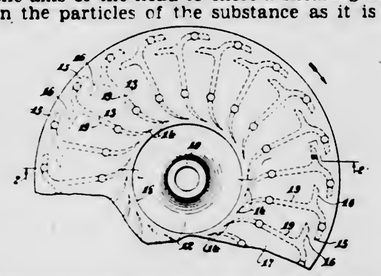
Application January 10, 1934, Serial No. 706,001
5 Claims. (Cl. 43—28)

1. In combination with a bait body, a loop extending outwardly therefrom and terminating in prongs engaging the bait body, at least one of said prongs abutting against the outer surface of the bait body, a hook provided with an eye engaging said loop and adapted to swing thereon, a reinforcing member provided with an annular portion surrounding said loop and positioned to limit the swinging of said hook and an attaching portion overlying the exposed prong of said loop, and a securing member entered through said attaching portion and through said exposed prong and extending into the body of the bait at an angle to the normal line of pull of said hook.

2,005,986
IMPEDANCE SET

Leo Behr, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania

Application December 4, 1931, Serial No. 578,951
8 Claims. (Cl. 201—48)

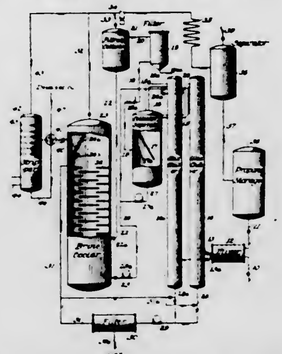


8. A resistance box comprising a movable indicating member indicating a number of resistance values differing progressively by equal increments for successive settings of said indicating member in one direction, a pair of contacts, a resistor continuously connected between said pair of contacts and of a magnitude twice the increment, a plurality of resistors connected in series and each of the same magnitude as said first resistor, a plurality of contacts connected to said plurality of resistors, and means operable upon movement of said indicating member to effect relative movement between said plurality of contacts and said pair of contacts, the dimensions and spacing of said contacts in the direction of movement being such and so related to movement of the indicating member that when said indicating member indicates even multiples of said increment said first resistor is effectively out of circuit and when said indicating member indicates odd multiples of said increment said first resistor is in shunt to one of said plurality of resistors effectively in circuit.

2,005,987
MICRONIZER HEAD

William Spencer Bowen, Westfield, N. J.

Application December 9, 1933, Serial No. 701,594
3 Claims. (Cl. 299—63)



1. Homogenizing means comprising a rotatable head having a blade formed with a surface lying in a plane parallel with the axis of the head to impart centrifugal force to a substance, means on the blade forming a surface at substantially right angles to the blade against which the substance is directed under centrifugal force, said means being provided with a cutting edge parallel to the axis of the head to exert a shearing force upon the particles of the substance as it is directed thereover under centrifugal force, and means substantially parallel to the last named means against which the substance is directed under centrifugal force from the said edge, the last named means being provided with a cutting edge parallel to the axis of the head to exert a shearing action on the particles of the substance.

2,005,988
DEWAXING WITH NONMISCIBLE REFRIGERANT

Bruce K. Brown, Evanston, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

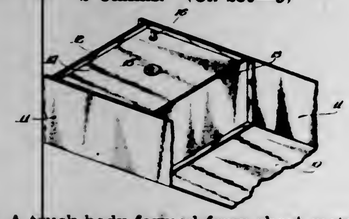
Application March 19, 1932, Serial No. 600,023
8 Claims. (Cl. 196—18)

1. The method of separating wax from a wax-bearing oil, which comprises diluting said oil with a liquefied, normally gaseous diluent, introducing the mixture into a body of cold inert refrigerant liquid, mechanically separating the solidified wax, the inert refrigerant liquid, and the diluted oil respectively from each other, vaporizing the diluent from the diluted oil in heat exchange relation to the refrigerant liquid, and returning the refrigerant liquid for contact with further amounts of diluted waxy oil.

2,005,989
CORE BARREL

Clarence E. Burt, Los Angeles, Calif., assignor to Baker Oil Tools, Inc., Huntington Park, Calif., a corporation of California

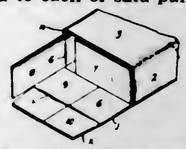
Application June 7, 1933, Serial No. 674,655
6 Claims. (Cl. 255—72)



1. A core barrel comprising a drill barrel having a cutter head at its lower end to penetrate

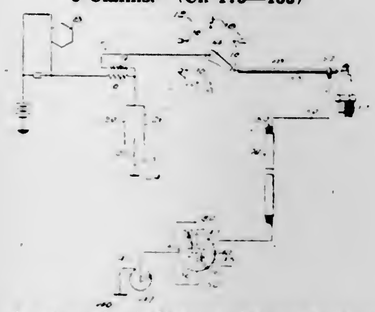
the formation to form a core, a core tube disposed within the drill barrel and about which the drill barrel may revolve, said core tube being movable axially relative to the drill barrel, a plunger actuated by the pressure of drilling fluid in the drill barrel connected with the upper end

of the core tube and exerting a constant downward pressure thereon so as to urge the same downwardly relative to the drill barrel, and percussion means interposed in the connection between the plunger and the core tube for imparting intermittent downward blows to the core tube during the operation of the drill barrel.



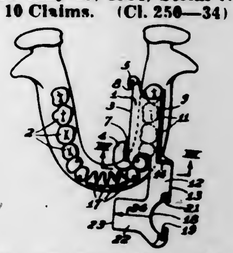
2,005,990
FIRE TRUCK
William S. Darley, Chicago, Ill.
Application January 22, 1934, Serial No. 707,682
2 Claims. (Cl. 280—5)

1. A truck body formed from sheet metal bent to constitute integral bottom and side walls; an end wall welded to said bottom and side walls; a partition traversing said body intermediate its ends and at a distance from said end wall and welded to said bottom and side walls to constitute the other end of a tank occupying the full width but only part of the length of said body; a cover member for said tank inserted between and welded to said side walls, end wall and partition below the tops thereof to form a filling trough, there being an opening leading through said cover member into the tank; and a discharge from said tank leading through the bottom of said body.



2,005,991
BOX
Thomas H. Gagen, Sandusky, Ohio, assignor to The Hinde and Dauch Paper Company, Sandusky, Ohio, a corporation of Ohio
Application January 24, 1934, Serial No. 708,098
3 Claims. (Cl. 229—40)

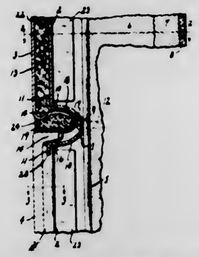
1. In a box of the character described, a face portion, side elements each hinged to said face portion and each having hinged thereto a tongue adapted to overlap with the corresponding tongue on the opposite side element, another face element comprising two abutting parts, and an end flap secured to each of said partial face ele-



ments and no wider than the element to which it is secured and adapted to tuck between an edge of each of said flaps and the first-named face portion.

2,005,992
IGNITION SYSTEM
Herman C. Heaton, Kenilworth, Ill.
Application August 11, 1930, Serial No. 474,341
Renewed November 24, 1934
6 Claims. (Cl. 175—183)

1. A system for indicating the operating characteristics of a plurality of high tension electrical circuits including means for successively energizing said circuits, shielded high tension conductors between said engaging means and said circuits, a tube filled with a gas providing for visible low tension discharges therein, a disc disposed centrally in said tube and connected to ground, a plurality of electrodes sealed in said tube in spaced relation about the periphery of said disc and electrostatically connected to said high tension conductors, and means for varying the resistance between said disc and ground.

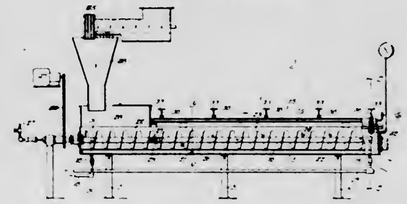


2,005,993
HOLDER FOR DENTAL X-RAY FILMS
Donald D. Heron and Robert S. Heron, Pittsburgh, Pa.
Application May 15, 1934, Serial No. 725,678
10 Claims. (Cl. 250—34)

1. A holder for dental X-ray films, comprising a relatively thin bite-piece adapted to be gripped between upper and lower back teeth and

formed adjacent one edge with an opening for receiving and holding an X-ray film substantially at right angles to itself, the opposite edge of the bite-piece being provided with a flange substantially parallel to the plane of the film, the width of the bite-piece being such that when said flange is placed in contact with the buccal surfaces of said teeth the film is spaced from those teeth whereby distortion of the film by contact with the teeth and gums is substantially eliminated.

2,005,994
BUILDING CONSTRUCTION
Russell L. Hohl, Shaker Heights, Ohio
Application May 27, 1933, Serial No. 673,190
11 Claims. (Cl. 72—24)



1. A runner for the purpose described comprising a flat back part adapted to be secured upon a wall body structure, having a pair of side parts extending from said back part to form channel means adapted to receive adjustably therealong the near inturned edges of sheathing panels for said wall body, with portions of said channel means reentrant to cooperate with said panel edges for securement of the latter by the bearing between the parts, and said runner having flange means extending straight laterally from its sides and adapted to position and support adjustably therealong the near ends of stretcher means for sealing the transverse joints between said panels.

2,005,995
RODLESS PUMP
Granville S. Knox, Los Angeles, Calif., assignor to W. L. Cummings, Los Angeles, Calif.
Application May 29, 1934, Serial No. 728,078
15 Claims. (Cl. 103—46)

1. In a fluid-actuated well pump adapted to be positioned in a well and having pressure fluid and exhaust fluid connection with the surface through separate conduits, a reciprocating pump unit having a stationary element and a reciprocating element, a motor unit comprising a stationary plunger assembly adapted to be connected to the stationary element of the reciprocating pump unit, and a cooperating reciprocable cylinder assembly adapted to be coupled to the reciprocating element of the pump unit and defining together with said plunger assembly a working chamber having a reciprocable piston element therein, valve means for said motor unit incorporated within said stationary plunger assembly for controlling the admission of pressure fluid to and the discharge of exhaust fluid from opposite ends of said working chamber, said plunger assembly also defining fluid passages extending directly from said valve means to said working chamber and from said valve means to said pressure fluid and exhaust fluid conduits, respectively, and means for actuating said valve means in response to predetermined movements of said cylinder assembly.

2,005,996
APPARATUS FOR HEAT-TREATING CHEESE
Norman Kraft, Wilmette, Ill., assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill., a corporation of Delaware
Application June 1, 1931, Serial No. 541,163
Renewed October 22, 1934
6 Claims. (Cl. 99—2)

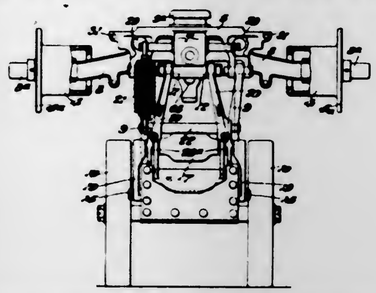
6. A vessel for heat-treating comminuted cheese, comprising a water jacketed body and a water jacketed cover therefor, the jackets of said body and cover having communicating ducts at opposite ends only of the vessel, a hot water supply pipe communicating with said body jacket, a partition in said body jacket between said ducts formed with one or more restricted flow holes of less cross sectional area than said supply pipe, and a hot water return pipe communicating with said body jacket on the opposite side of said partition from said supply pipe.

2,005,997
PRODUCTION OF MIXED FERTILIZERS
Carl Krauch and Carl Eyer, Ludwigshafen-on-the-Rhine, Gottwald Baetz, Oggersheim, and Friedrich Korn, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application March 9, 1931, Serial No. 521,253. In Germany June 5, 1928
22 Claims. (Cl. 71—9)

1. Process of producing globular granules of a mixed fertilizer resistant to attrition, containing ammonium nitrate as a major constituent which comprises adding to a melt containing ammonium nitrate and at least one other fertilizing salt up to 10 per cent by weight of the melt of a sodium salt soluble therein and non-injurious to plants, and then solidifying the resulting melt by spraying.

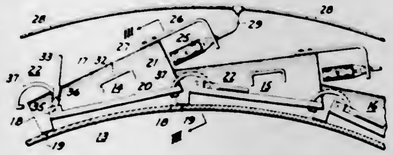
2,005,998
AUTOMATIC SAW FILING DEVICE
Erik Lander, Oakland, Calif.
Application November 28, 1932, Serial No. 644,710
3 Claims. (Cl. 76—36)

1. A saw filing device, comprising a frame including a finger-engageable grip, and a U-shaped member rigidly connected together, a sleeve rotatably mounted in said member formed with a recess to receive the end of a file, means for securing the end of a file in said sleeve, means for securing said sleeve and file at adjusted rotary positions, an arcuate finger having a recess in its base and pivotally mounted in said frame having its axis of rotation in line with the recess in said sleeve and file secured therein, a set-screw cooperating with said recess to limit the swinging movements of said finger, and a spring tending to urge said finger into its position of maximum of angularity relative to the plane of the file.



2,005,999
GREETING CARD ASSEMBLY
Wallace Q. Larson, Minneapolis, Minn., assignor to Augsburg Publishing House, Minneapolis, Minn., a corporation of Minnesota
Application March 26, 1934, Serial No. 717,441
3 Claims. (Cl. 229—92.7)

1. A greeting card assembly comprising a sheet of fairly heavy paper of substantially rectangular form in plan folded upon itself some distance from a transverse median line so that the folded edge is spaced from the opposite edge after folding, said sheet then being folded again along a median line substantially at right angles to said line, said sheet having a flap extending along one side, a seasonal greeting card bearing a picture fixedly mounted upon and secured to said sheet at one side of said last mentioned line, a seasonal greeting at the other side of said last mentioned line, said picture and greeting being appropriate to a certain season, said flap being adapted to be folded over the edge of the folded sheet to seal the same whereby an address can be placed upon the outer side of said folded sheet and the device mailed.



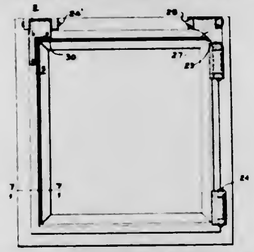
2,006,000
MOTOR TRACTOR AND TRAILER
Oliver Dawson North and Percy Garibaldi Hugh, London, England, assignors to Scammell Lorries Limited, London, England
Application November 7, 1933, Serial No. 696,939
In Great Britain May 24, 1933
5 Claims. (Cl. 280—33.1)

5. In a tractor and trailer a transversely disposed coupling member on the trailer, means permitting limited oscillation of the said coupling member about points between its centre and ends, and coupling guides on opposite sides of

the longitudinal centre line on the tractor adapted to be slid into engagement with said oscillatable coupling member.

2,006,001
APPARATUS FOR ANNEALING
Eugene A. Rowe, San Francisco, and Samuel H. Edwards and Francis N. Fossati, Richmond, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application September 10, 1934, Serial No. 743,320
6 Claims. (Cl. 263—5)

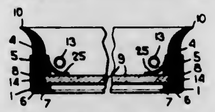
2. In an apparatus of the character described, a relatively short, shallow, channel shaped shield, one end of which is larger than the other and is adapted to overlap the smaller end of a similar shield, means comprising a burner adapted to direct a stream of hot gases into the larger end of said shield, and means for securing said shield to a second shield in overlapping relation.



2,006,002
MANUFACTURE OF PHOTOGRAPHIC SILVER HALIDE EMULSION LAYERS
Wilhelm Schneider, Dessau in Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
No Drawing. Application November 24, 1933, Serial No. 699,635. In Germany November 29, 1932
9 Claims. (Cl. 95—7)

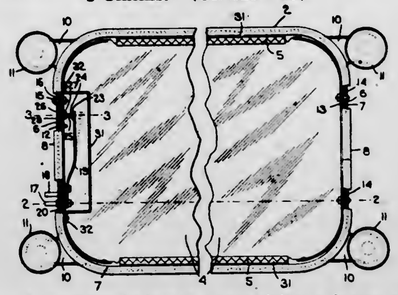
1. In the process of manufacturing photographic silver halide emulsion layers the step which comprises adding to a mixture containing silver-halide, gelatin and water a mixture of gelatin and a compound selected from the group consisting of artificial polymeric carboxylic acids containing in their molecule a methylene group, salts of artificial polymeric carboxylic acids containing in their molecule a methylene group, polymerization products containing in their molecule a methylene group from mixtures of unsaturated carboxylic acids and of the derivatives thereof.

2,006,003
COMPLEX COMPOUNDS OF ORGANIC MERCAPTO COMPOUNDS
Walter Schoeller, Berlin-Westend, Hans Georg Allardt, Berlin-Reinickendorf-West, and Adolf Feldt, Berlin-Charlottenberg, Germany, assignors to Schering-Kahlbaum A. G., Berlin, Germany
No Drawing. Application July 30, 1932, Serial No. 627,098. In Germany August 3, 1931
6 Claims. (Cl. 260—11)



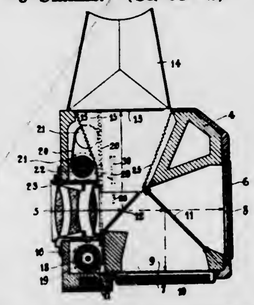
1. Double compounds having the formula $A.(B)_n$, wherein A is an organic compound containing a sulfhydryl group, the H-atom of which is substituted by an element, the sulfide of which is neither soluble in nor decomposed by water and which element is not combined with elements other than sulfur, while B is a compound containing a sulfhydryl group, the H-atom of which may be substituted by an alkali forming metal, n being an integer, these compounds being readily soluble in water, dissolving only with difficulty in organic solvents and having a high thereapeutical value.

2,006,004
WINDOW CASEMENT
Frederick C. Wenzel, Stamford, Conn.
Application August 30, 1932, Serial No. 631,025
24 Claims. (Cl. 189—66)



1. In a casement window assembly, a casement window, a series of hinges for supporting said window, one of said hinges being operable to permit swinging of said window about two different axes, the others of said hinges being operable as hinges only when said window is rotated about those hinges, said windows being releasable from said hinges by direct outward pressure.

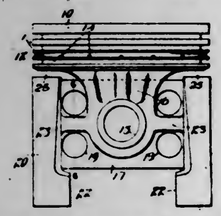
2,006,005
WINDSHIELD HEATER
Max Zaiger, Swampscott, Mass.
Application December 18, 1934, Serial No. 758,073
7 Claims. (Cl. 219—19)



5. A windshield heater comprising a frame L-shaped in cross section, a glass-holding member of rubber fitting within the frame and provided with a flexible lip projecting beyond the frame and adapted to engage the windshield and also provided with a glass-receiving groove, a pane of glass carried by said member and having its edges received in said groove, said glass clamping the glass-holding member against the frame and retaining it therein, spaced terminals on said frame and electric heating resistors connecting said terminals.

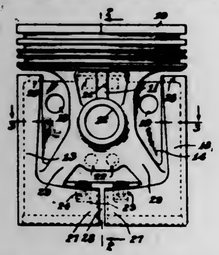
2,006,006
WINDSHIELD HEATER
Max Zaiger, Swampscott, Mass.
Application January 26, 1935, Serial No. 3,605
3 Claims. (Cl. 219—19)

3. A windshield heater comprising a frame element having a flexible lip to engage a windshield, a glass pane carried by said frame element and forming with the windshield a heating chamber, two resistor-supporting strips at opposite ends of the frame on the interior thereof, one of which strips is insulated from the metal frame member and the other of which is electrically connected thereto, heating resistors connected at one end to one strip and at the other end to the other strip, two circuit terminals carried by the metal frame member, one of the terminals being insulated therefrom, a thermostatic element mounted within said frame member and connected to said latter terminal and a contact carried by the insulated resistor-supporting strip and co-operating with the thermostatic element to close the heating circuit when the temperature within said chamber is below a predetermined point and to open said circuit when the temperature rises above said point.



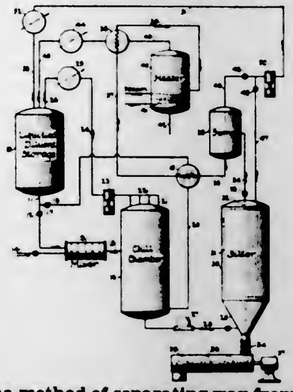
2,006,007
CAMERA FOR TAKING INSTANTANEOUS COLOR PHOTOGRAPHS
Josef Zimmer, Nurburg, near Ahrweiler, Germany
Application April 12, 1933, Serial No. 665,629
In Germany April 19, 1932
8 Claims. (Cl. 95—2)

4. A camera for taking instantaneous multicolor photographs, comprising in combination: a camera body; an objective on said camera body; a focussing screen on said camera body; at least one light-transmitting distributing mirror arranged behind said objective and co-operating therewith to distribute the light passing through said objective on to a plurality of independent light sensitive layers; at least one light-reflecting, but not light-transmitting mirror ar-



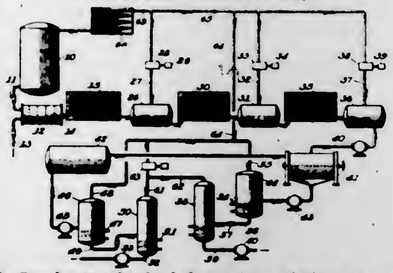
ranged between said light-transmitting distributing mirror and said objective behind the latter at an angle to the optical axis thereof, rectilinearly movable transversely to the said axis, and reflecting incoming light rays on to said focussing screen; a shutter comprising a cloth roller blind provided with an exposure opening and having one end attached to said light-reflecting, but not light-transmitting mirror; pull members likewise attached to said last named mirror; a pull and wind-up roller connected to said pull members; and a wind-up spring associated with said roller.

2,006,008
PISTON
Adolph L. Nelson, Indianapolis, Ind., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich.
Application June 5, 1923, Serial No. 643,499
15 Claims. (Cl. 309—13)



1. In a piston, a sectional skirt, a head separate therefrom, piston pin bearings integral with the head, struts uniting the sections of the skirt to each other and to the piston pin bearings, and integral ridges running from the piston pin bearings to the sections of the skirt said ridges extending along at least one side of each strut, substantially as set forth.

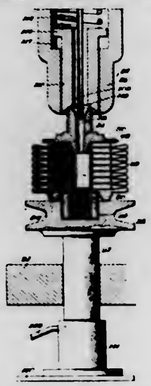
2,006,009
PISTON
Adolph L. Nelson, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich.
Application May 15, 1928, Serial No. 278,026
Renewed March 26, 1931
46 Claims. (Cl. 309—13)



1. A piston comprising a head, piers depending from the head and carrying piston pin bosses, a pair of thrust faces having their upper ends spaced from the head and the piers, a pair of ties extending at a downward angle from the piers to each thrust face, the ties being homogeneous with the piers and with the thrust face, and a strut of relatively inexpansible material associated with each pier and extending between the thrust faces.

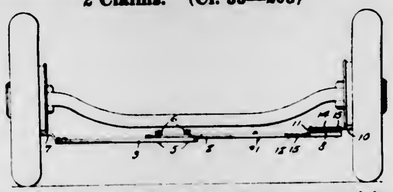
2,006,010
SEPARATING WAX FROM OIL
Harold V. Atwell, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application October 26, 1931, Serial No. 571,150
4 Claims. (Cl. 196—19)

2. The method of separating wax from oil which comprises diluting a wax-bearing oil under pressure with a diluent containing a normally gaseous fluoride of a hydrocarbon containing not more than two carbon atoms, said fluoride containing less than two chlorine atoms, cooling the diluted oil to effect solidification of wax, mechanically separating the wax from the diluted oil and removing the diluent from the dewaxed diluted oil.



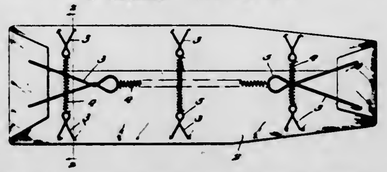
2,006,011
CONTINUOUS PROPANE DEWAXING
Harold V. Atwell, White Plains, N. Y., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application April 24, 1933, Serial No. 667,564
7 Claims. (Cl. 196—18)

1. In the method of dewaxing oils by means of liquefied normally gaseous diluents, the step of continuously chilling a diluted oil-wax mixture without passing said mixture through a restricted opening between a zone of high pressure and a zone of low pressure, which step comprises continuously passing said mixture through an elongated conduit whereby the rate of vaporization of propane is controlled by the gradual pressure drop incident to the flow of said mixture through said conduit.



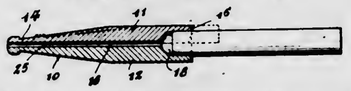
4. The process of continuously cooling a propane-oil-wax mixture to effect the solidification of wax in readily separable form, which comprises forcing said mixture through an elongated closed passageway of narrow cross section to effect a gradual and substantial pressure drop, allowing the gradual pressure drop to cause vaporization of propane for cooling the mixture to solidify the wax and maintaining the walls of the passageway at a sufficiently high temperature to prevent wax crystals from adhering thereto.

2,006,012
MACHINE FOR CHARGING CONTAINERS
Paul E. Cate, Knoxville, Tenn., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a corporation of Delaware
Original application September 2, 1932, Serial No. 631,597. Divided and this application December 7, 1933, Serial No. 701,406
3 Claims. (Cl. 226—96)



1. In a bellows handling machine, a movable carrier adapted to support a plurality of bellows, means for introducing a liquid charge into said bellows including a casing, a charge delivery tube having its delivery end extending beyond the end of said casing, a sleeve member slidably mounted in said casing and surrounding said tube, the end of said sleeve member normally extending beyond and protecting the delivery end of said tube, means yieldably resisting inward movement of said sleeve member, means for moving said carrier to advance said bellows one after another into substantial alignment with said sleeve member, and means for moving said bellows one after another to effect a fluid-tight engagement between the ends of said bellows and said sleeve member and withdraw said sleeve member to project the end of said tube into an opening in the end of each said bellows.

2,006,013
AUTOMOBILE WHEEL ALIGNER
Van Claywell, Siren, Wis.
Application July 24, 1934, Serial No. 736,740
2 Claims. (Cl. 33—203)



1. An automobile wheel aligner comprising a bar including sections adjustably connected whereby the length of the bar may be increased and decreased, a pointed element carried by one of the sections to engage with one of the wheels of an automobile, a bracket secured to the other section of the bar and having angularly related apertured ends, a pointed rod slidably mounted in the apertured ends of the bracket to engage with the other wheel of the automobile, a scale on the bar, said rod having a portion angularly disposed to operate over the scale as a pointer, and spring means for said rod.

2,006,014
IRONING BOARD
Joseph E. Doyle, Clarks Summit, Pa.
Application March 15, 1934, Serial No. 715,753
2 Claims. (Cl. 24—87)

1. A fastening for ironing board covers consisting of a pair of cover-engaging members and a contractile spring attached to and extending between said members, each of said members having an eye to be engaged by an end of the spring, and diverging side members extending from the eye and terminating in cover-engaging spurs.

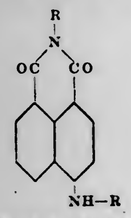
2,006,015
SMOKER'S ITEM
Goswin Droop, Habana, Cuba
Application April 16, 1934, Serial No. 720,857
In Cuba November 28, 1933
3 Claims. (Cl. 131—10)

1. A cigar or cigarette holder comprising a pair of complemental sections having flat abutting face portions and recesses at one end defining a socket, one of said sections having a dovetailed groove extending from its respective recess to a point intermediate the length of the section, a smoke channel in the section in alinement and communicating with the groove, the smoke channel being of less diameter than the groove, defining a shoulder at the juncture therewith, a dovetailed rib formed upon the other section, said rib being of a length corresponding to that of the groove whereby when said sections are in engaged position the rib will engage said shoulder, and a smoke duct extending medially and longitudinally of said rib and in communication with the first named smoke duct.

2,006,016
METHOD OF MAKING PIGMENTED PAPER
Alwin C. Eide and John Henry Calbeck, Columbus, Ohio, assignors to American Zinc, Lead & Smelting Company, St. Louis, Mo., a corporation of Maine
No Drawing. Application July 31, 1934, Serial No. 737,856
25 Claims. (Cl. 92—21)

1. In a process of making pigmented paper, the step of incorporating undried zinc sulfide in the paper pulp.

2,006,017



4-AMINO-1,8-NAPHTHALENE-DICARBOXYLIC ACID IMIDES AND 4-ALKYLAMINO-1,8-NAPHTHALENE-DICARBOXYLIC ACID ALKYLIMIDES AND A PROCESS OF PREPARING THEM

Wilhelm Eckert and Walter Gmelin, Frankfort-on-the-Main-Hechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

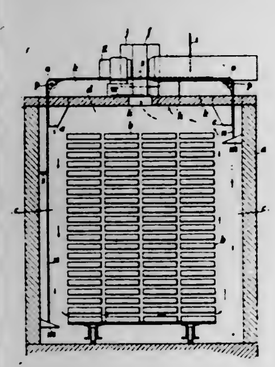
No Drawing. Application March 24, 1933, Serial No. 662,638. In Germany March 24, 1932

8 Claims. (Cl. 260—124)

5. The compounds of the following constitution:

wherein R represents an amino-, alkyl or cyclohexyl group.

2,006,018



DRYING OF TIMBER OR OTHER MATERIALS

Charles Goodall, Tutbury, Burton-on-Trent, England

Application March 15, 1934, Serial No. 715,709

In Great Britain December 30, 1933

2 Claims. (Cl. 34—46)

1. In apparatus for use in the drying of timber or other materials, the combination of a chamber in which the timber or other material can be stacked leaving spaces within and around the stack, a deflector vertically movable in each side space and adapted to direct the air horizontally through the stack, flexible means interconnecting the deflectors so that upward movement of one is accompanied by downward movement of the other, reversible actuating means for the deflectors, a fan, means for conveying air from the fan into each side space alternately, a reversing valve situated between the fan and chamber inlets, and a striker associated with the deflector actuating mechanism for reversing the said valve, substantially as described.

2,006,019

MEASURING DISPENSER

William S. Holesworth, Reno, Nev.

Application July 16, 1934, Serial No. 734,539

3 Claims. (Cl. 221—98)

1. A measuring and dispensing device for attachment to the mouth of a container, such device comprising an inner cup having a scoop therein, an outer cup having a portion radially spaced from the inner chamber, said scoop being in communication with the space between the cups by means of openings in the inner cup communicating with such space, each of said openings leading into corresponding measuring receptacles located in said space, a rotatable spout carried by the second cup and having an opening arranged to be registered in communication with any one of said receptacles.

2,006,020

PROCESS FOR PREPARING A SUBSTANCE DERIVED FROM AN AMINO ALIPHATIC ACID AND PHENYLQUINOLINE ORTHO-CARBOXYLIC ACID WHICH IS CAPABLE OF LOWERING THE URIC ACID LEVEL

Hirsch Gregor Jacubson, Berlin-Charlottenburg, Germany

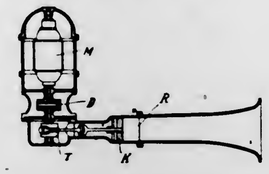
No Drawing. Application December 29, 1933, Serial No. 704,594. In Germany January 2, 1933

6 Claims. (Cl. 260—39)

1. A method of preparing a body capable of depressing the uric acid level consisting in interacting in aqueous solution equivalent quantities of 2-phenylquinoline-4-carboxylic acid and monoethanolamine, adding to the resulting reaction liquid, which contains a lipoid-soluble amide of 2-phenylquinoline-4-carboxylic acid, an equivalent quantity of an aqueous solution of a water-soluble aliphatic amino carboxylic acid, and removing from the solution the complex amino acid derivative formed.

2,006,021

HORN AND HOWLER FOR MARINE AND NAVAL USE



Theodor Jessen, Altona-Bahrenfeld, Germany

Application August 15, 1933, Serial No. 685,272

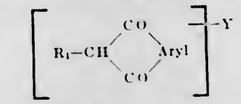
In Germany January 30, 1933

4 Claims. (Cl. 177—7)

1. A horn, comprising, in combination, a resonator providing an air column having a definite natural period of oscillation, a vibrating member disposed at the inner end of said resonator, means for vibrating said member continuously and at selectively variable rates into and out of the range of frequency that will produce an audible tone by resonance with said air column, said means being under the control of the operator of said horn and directly connected with said vibrating member, whereby an intermittently audible

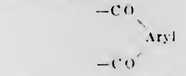
signal may be produced without cessation of operation of said vibrating member.

2,006,022



DYESTUFF OF THE QUINOPHTHALONE SERIES OF GOOD FASTNESS TO LIGHT

Georg Kränzlein, Frankfort-on-the-Main, Hans Schlichenmaier, Kelkheim in Taunus, and Ludwig Schörnig, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware



No Drawing. Application November 14, 1933, Serial No. 698,016. In Germany November 18, 1932

5 Claims. (Cl. 260—40)

1. The compounds of the general formula:

wherein R_1 represents a 3-hydroxy-quinolyl-radical bound in 2-positon,

represents the radical of an ortho-dicarboxylic acid of the benzene and naphthalene series and Y means that the compounds may be sulfonated.

2,006,023

MEDICINAL PREPARATION

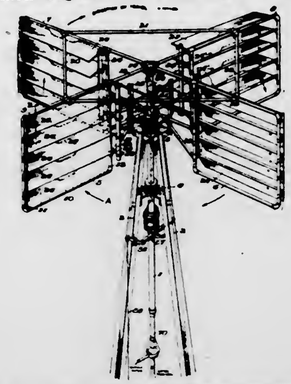
Fritz Lange and Ludwig Taub, Wuppertal-Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York

No Drawing. Application October 7, 1930, Serial No. 487,087. In Germany October 9, 1929

7 Claims. (Cl. 167—81)

1. Medicinal preparations comprising a liquid containing vitamine B, prepared by fermentation of a yeast extract containing a fermentable sugar by means of a strongly fermenting yeast at a temperature between about 15–30° C., said liquids being clear solutions of south wine coloration, being palatable, therapeutically valuable tonics and restoratives.

2,006,024



WINDMILL

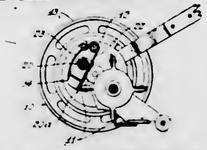
Alvah M. Lockwood, Charlotte, Tex.

Application May 31, 1934, Serial No. 728,444

28 Claims. (Cl. 170—28)

1. A windmill comprising a rotatable shaft, a plurality of frame members carried by said shaft, a plurality of vane members carried by each of said frame members, means connecting the vane members of each of said frame members, and means interconnecting said vane connecting means and capable of rotating movement for

causing simultaneous swinging movement of said vane members.



2,006,025

LAWN MOWER SHARPENING DEVICE

Martin Michalski, North Chicago, Ill.

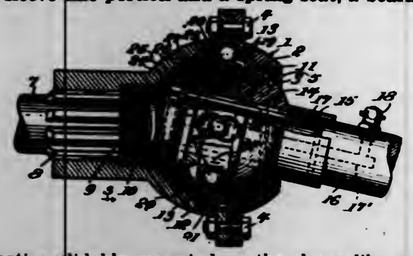
Application August 10, 1932, Serial No. 628,253

1 Claim. (Cl. 51—246)

In a lawn mower comprising a frame structure, a brace bar carried thereby, and a bladed cutter mounted for rotation on the frame structure, a frame comprising a wall having a slot therethrough, two spaced flanges carried by said wall, a floor connected with the wall and said flanges, a roll of abrasive material mounted between said flanges, the web of said roll extending through the slot in said wall, the latter constituting a backing surface for the web projecting through the slot, hooks connected with said wall for connection with the brace bar, to hold the backing surface of said wall in operative relation with the bladed cutter, resilient means urging the wall in the direction of the bladed cutter, to support the abrasive lying against the backing surface in the path of the blades, and brake members carried by said floor for yieldingly resisting unwinding rotation of the roll of abrasive material.

2,006,026

UNIVERSAL JOINT



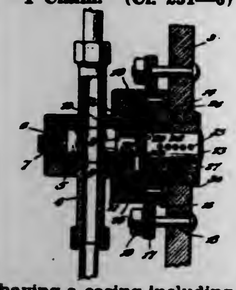
Gerhard J. Midthun, Lander, Wyo.

Application March 5, 1934, Serial No. 714,151

1 Claim. (Cl. 64—91)

A universal joint comprising a female element of substantially spherical shape and including detachable sections, means for connecting a shaft to said female element, a male element received within the female element and shaped to conform to the contour of the latter, means for connecting a shaft to the male element, said male and female elements having communicating pockets, and the pockets of both elements being of substantially S-shape, balls received by said pockets to establish a drive between the female and

male elements, a retaining ring for said balls, said male and female elements having communicating annular grooves to receive the retaining ring, said male element having a recess to form a sleeve-like portion and a spring seat, a bearing



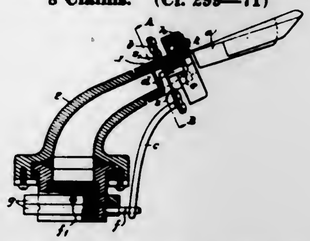
portion slidably mounted on the sleeve-like portion and having a recess to form a seat, a coil spring interposed between said seats to urge the bearing element in engagement with the female element.

2,006,027

FUEL-VALVE LOCK FOR MOTOR VEHICLES

Samuel Moore, Cleveland, Ohio, assignor of thirty-three and one-third per cent to Roger Price and thirty-three and one-third per cent to William Pierson, Cleveland, Ohio

Application July 6, 1933, Serial No. 679,245
1 Claim. (Cl. 251—6)



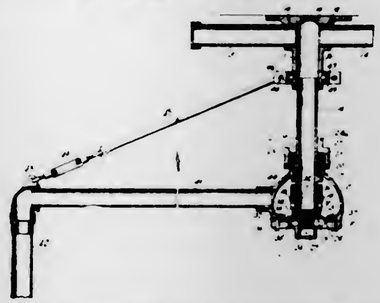
A valve having a casing including a cylindrical body open at one end, a valve plug rotatable in said body and having a neck projecting from the open end thereof, a cup-shaped boss surrounding said body in spaced relation to the open end thereof, the marginal wall of which projects beyond the open end of the body, the portion of the body projecting into the boss having its outer peripheral surface beveled to form a transversely tapered groove with the boss about the body, a disk threaded into the open end of the body and fitting snugly about the neck of the valve plug, packing means provided between the disk and body of the valve plug to form a tight joint, a cylindrical lock case having the inner end portion thereof fitting snugly into the boss and being internally beveled from its inner end to conform to and fit snugly within the groove, an annular flange surrounding said case and abutting the outer edge face of the marginal wall of the boss, fasteners for detachably securing the flange to said wall, the outer end portion of the neck of said valve plug extending into said lock case when the case is in place, a lock barrel fitted into said case through the outer end thereof and held against relative rotation therewith, a lock cylinder rotatably mounted in said barrel, and a disk at the inner end of said lock cylinder abutting the inner end of the barrel and engaging the neck of the valve plug to turn the valve plug when the lock cylinder is turned.

2,006,028

SPRINKLER

Alfred Netzband and Bruno Kowalski, Berlin-Spandau, Germany

Application February 6, 1934, Serial No. 709,978
In Germany November 25, 1931
8 Claims. (Cl. 299—71)



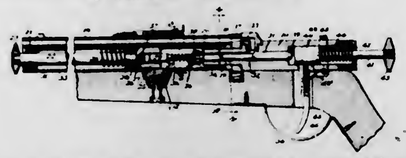
3. In a sprinkler, a rotary nozzle mechanism through which the jet is ejected, a rotatable element on the rotary nozzle mechanism, a baffle plate connected to said rotatable element having a reaction surface arranged to embrace and be impacted by the jet and adapted to drive the rotatable element, the rotary element being arranged coaxially to the jet, and means for periodically transmitting the reaction from the reaction surface of the baffle to the rotary nozzle mechanism in a direction to cause alternate rotation of said rotary nozzle mechanism.

2,006,029

VEHICLE WASHING APPARATUS

Henry Nichols, New York, N. Y.

Application December 5, 1932, Serial No. 645,868
5 Claims. (Cl. 251—8)



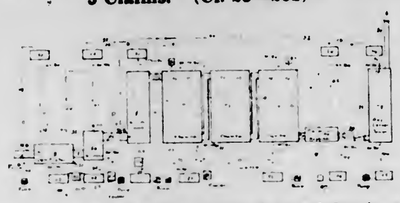
1. In a washing machine, a normally fixed supply conduit having a discharge end, a valve casing rotatively engaging said conduit and enclosing said discharge end, said valve casing having an outlet, a valve sleeve rotatively mounted on and enclosing the discharge end of said conduit, said valve sleeve having a closed end and also having outlet passages therein, means for preventing axial movement of said casing with respect to said conduit, means for so connecting the valve casing and the valve sleeve that rotative movement of said casing will impart corresponding rotative movement to the valve sleeve, means constructed and arranged to impart axial movements to said sleeve during rotation thereof in such manner as to move the closed end of the valve sleeve toward and from the discharge end of the conduit, and yieldable means located within said casing and constructed and arranged to normally press said closed end of the valve sleeve against the discharge end of the supply conduit.

2,006,030

PNEUMATIC RIFLE

Nathan H. Price, Birmingham, Ala., assignor of one-half to Grady Gillespie, Birmingham, Ala.

Application August 14, 1934, Serial No. 739,802
8 Claims. (Cl. 124—8)



1. A rifle of the kind described comprising a gun stock, a gun body carried by the stock and having a rear portion forming a breech and a forward portion forming a pump including a cylinder, a discharge barrel superimposed upon said cylinder, tubular magazines arranged at opposite sides of the barrel and of less length than the latter, a revolving feed cylinder confronting the said barrel and magazines at their rear ends and having rearwardly tapered shot receiving openings uniformly spaced from each other in a circular trend for register with the said barrel and magazines, a tubular extension on the breech and rotatably supporting the feed cylinder, a block arranged within the pump to provide a compressed air chamber adjacent the breech and having an opening to the pumping side of said pump, an air pumping plunger fitted in said pump cylinder at the pumping side thereof, a valve seated in said block to close the opening therein, a breech nozzle leading from said tubular extension for discharging compressed air through the revolving feed cylinder into the discharge barrel, a push pin working in the tubular extension and having a valve for closing communication between the compressed air chamber and said nozzle, an expansion spring between the said valves to normally hold the same seated, a hammer acting upon said push pin and spring controlled, and a trigger cocking said hammer.

2,006,031

APPARATUS FOR THE MANUFACTURE OF SULPHURIC ACID

Erich Rothammel, Pforzheim, Germany, assignor to the firm Sulfurit S. A., Basel, Switzerland

Application April 5, 1929, Serial No. 352,844
5 Claims. (Cl. 23—261)

1. An apparatus for producing sulphuric acid by oxidizing SO_2-containing gases by means of nitrogen oxides in the presence of water, comprising a denitrator, an inlet conduit for SO_2-containing hot gases for said denitrator, at least one intake conduit for nitrous vitriol for said denitrator, at least one discharge conduit for denitrated vitriol from the said denitrator, a nitrator, a gas conveying conduit between the denitrator and the nitrator, at least one intake conduit for nitrous vitriol into the nitrator, at least one discharge conduit for nitrous vitriol from the nitrator, a Glover tower, at least one intake conduit for nitrous vitriol to said Glover tower, a device for spraying the hot ascending gases therein with nitrous vitriol, a gas inlet conduit between the nitrator and the Glover tower, a regulating element in this conduit, a pressure conduit for the gases extending into the gas inlet conduit and having an injector nozzle adapted to draw gases from the nitrator into the Glover tower at the nozzle inlet to the latter, a connecting conduit to subsequent treatment containers passing from the upper part of the Glover tower, a suction conduit from said connecting conduit, a single exhauster connected to the said pressure conduit and also to the said suction conduit, a regulating element on the exhauster for the aspirated and forced gas currents, at least one discharge conduit for nitrous vitriol from said Glover tower, at least two subsequent-treatment containers for the gases escaping from the Glover tower and not withdrawn by the suction conduit, at least one elevated and one low-lying supply vessel serving each treatment vessel in respect of the introduced and discharged liquids, and a Gay-Lussac tower for absorbing the remainder of the nitrogen oxides by means of nitrous vitriol.

2,006,032

BRIDLE BIT

Lilburn L. Rupert, Muskogee, Okla.

Application January 26, 1934, Serial No. 708,465
2 Claims. (Cl. 54—7)

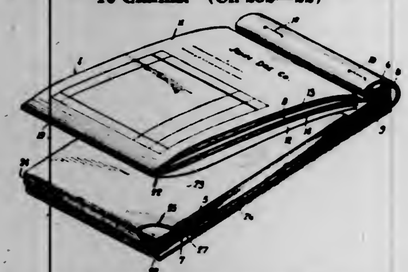
1. A bit of the class described comprising a pair of side shanks, a cross piece having its ends integrally connected with the upper portions of the shanks, upper and lower rings connected with the ends of the shanks, a single substantially semi-circular member connected at its lower end to an intermediate part of the rear portion of each shank and its upper ends connected to the upper ring adjacent the point of connection of said ring with the upper end of the shank, the cross piece having its central part bowed upwardly, the lower parts of the shanks being bent slightly rearwardly, each shank being of substantially circular shape in cross section and the cross piece being of substantially circular shape in cross section, the shanks, the cross piece, the rings and the semi-circular members all being of hollow construction and formed of molybdenum chromium plated metal and all of the parts being integrally connected together, with the junction of the cross piece with the shanks being rounded outwardly to eliminate sharp corners.

2,006,033

HANGER

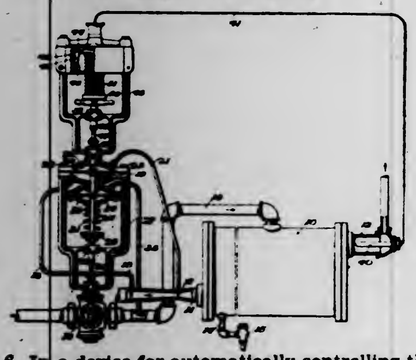
Charles E. Sharpe, Kenmore, N. Y.

Application April 25, 1933, Serial No. 667,873
Renewed November 21, 1934
2 Claims. (Cl. 211—32)



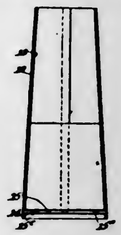
1. A hanger comprising connected diverging supporting members having their free ends flat-

tened, a hat engaging member formed integrally with the supporting members and including end



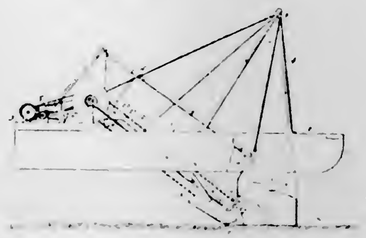
and side portions with said side portions curved towards each other and arcuately curved throughout their length.

2,006,034
MANIFOLDING RECORD BOOK
Gray Stevens, Weymouth, Mass., assignor, by mesne assignments, to American Sales Book Company, Inc., a corporation of Delaware
Application January 23, 1934, Serial No. 707,880
10 Claims. (Cl. 282—22)



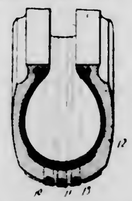
1. A single manifolding set including, in combination, a record leaf having an extension binding stub, record and transfer leaves positioned at both surfaces of the leaf with the stub and in manifolding transfer relation therewith and with each other, said record and transfer leaves at both sides of the leaf with the stub being attached to the latter leaf at the margin thereof opposite to said stub, and being otherwise free of attachment with said stub leaf and having free ends extending toward said stub.

2,006,035
WATER HEATER CONTROL
Alden D. Stewart, Knoxville, Tenn., assignor to The Fulton Syphon Company, Knoxville, Tenn., a corporation of Delaware
Application July 20, 1932, Serial No. 623,676
25 Claims. (Cl. 236—20)



6. In a device for automatically controlling the flow of steam to an instantaneous water heater, in combination with the heater, its inlet and outlet water connections and its steam inlet, a valve in said inlet, and means for automatically controlling said valve including a pressure responsive element connected to points of differential pressure in said water connection and operatively connected to said valve, means responsive to variations in the steam pressure operatively connected to said valve, and a thermostat subjected to the temperature of the water in the outlet connections and operatively connected to said valve.

2,006,036
METHOD OF MAKING CONTAINERS
Herbert Maclean Ware, Northwood, England
Application January 4, 1933, Serial No. 650,151
In Great Britain January 14, 1932
2 Claims. (Cl. 93—36)



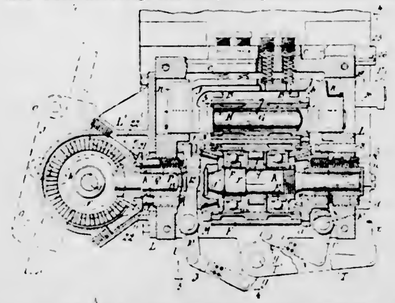
1. Method of making a container body of longitudinal tapering form from paper or the like which consists in forming a sheet into the shape of the body, temporarily holding together the opposed longitudinal edges of the so formed sheet so that the interior of the body is left open and passing the body through a bath of proofing medium so that the latter enters the interior of the body and exerts pressure against the said opposed edges of the sheet so that when the proofing medium sets these edges are sealed together and permanency is imparted to the body.

2,006,037
DREDGE AND DIVING BELL
Alvie C. Woodruff, Drewsey, Oreg.
Application June 12, 1934, Serial No. 730,330
2 Claims. (Cl. 37—56)

1. A device of the character set forth comprising a float, a derrick frame carried by said float, a diving bell movably connected to the float, a hoisting mechanism operating in connection with the derrick frame and connected to the bell for raising and lowering the latter, and a power driven endless conveyor movably mounted to the float and pivotally connected with the diving bell to move with the latter.

2,006,038
VEHICLE TIRE
Masuji Yamaki, Sanno, Omori-ku, Tokyo-shi, Japan
Application June 8, 1934, Serial No. 729,716
In Japan June 6, 1933
1 Claim. (Cl. 152—14)

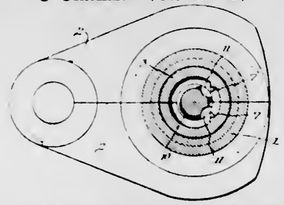
A vehicle tire of resilient material comprising a plurality of coils of hard metal wire embedded along and underneath the tread surfaces or ridges thereof, the hollow space or core of each coil being filled with rough crystals of silica or similar material solidified by medium of binder to reenforce the strength of the coils and to stand against wearing of the tire.



2,006,039
UNSYMMETRICAL DI-ALKYL OR ALKYL-ARALKYL DERIVATIVES OF RESORCINOL AND PROCESS OF MAKING SAME
William E. Austin, New York, N. Y., assignor to Redro Laboratories, Inc., a corporation of New York
No Drawing. Application September 14, 1932, Serial No. 633,086
7 Claims. (Cl. 260—154)

1. Diakyl resorcinols of the general formula $C_6H_2(OH)_2R'R''$ wherein R' and R'' represent different alkyls one of which contains three or more carbon atoms.

5. The process of forming unsymmetrical dialkyl or alkyl-aralkyl derivatives of resorcinol by treating resorcinol in the presence of a condensing agent with an acylating compound capable of yielding a substituting radical sought in the final product, thereafter treating the resulting substance in the presence of a condensing agent with an acylating compound capable of yielding a different substituting radical sought in the final product, and then reducing the resorcinol derivative so produced.



2,006,040
FEED FOR SHEET METAL WORKING MACHINES
Edward V. Crane, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a corporation of Delaware
Application February 17, 1932, Serial No. 593,546
5 Claims. (Cl. 271—2.4)

1. A high-speed feeding mechanism for a metal working machine, comprising a feed-roll in the form of a hollow cylindrical shell, an oscillating driving means for said roll in the form of a shaft passing through and concentric with the shell, a one-way driving connection between said roll and its driving means including anti-friction bearings and a one-way clutch mounted in the annular space between the inner surface of the shell and the shaft, whereby the roll may be intermittently driven in one direction only, and friction braking means for said roll including a pair of elements in combination with means whereby they may be forced towards each other against the opposite end portions of the shell to render the braking means sufficiently effective on the roll, throughout substantially all of the retarded portion of each effective driving period of the roll-driving means, to prevent the over-

running of the roll during such periods, and means whereby the effectiveness of the brake-applying means may be varied to any desired extent throughout the accelerated portion of each such driving period to permit the roll to run substantially free.

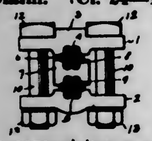
2,006,041
GLASS BOTTLE MOLDING MEANS
Frank L. Darling, Baltimore, Md., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application March 16, 1931, Serial No. 523,124
8 Claims. (Cl. 49—9)

1. The combination with a neck ring for providing a finish for the necks of glass bottles having two opposed and circumferentially spaced, projections extending into the bore of the ring to form exterior depressions in the finish about the mouth of a bottle, of a neck pin adapted to be positioned in the bore of the neck ring and having longitudinally extending recesses of tapering depth formed in its outer surface in substantial alignment with each of said projections on the ring, for the purpose described.

2,006,042
SEAL
Emil Dietze, Richmond Hill, N. Y., assignor to American Casting & Manufacturing Corporation, Brooklyn, N. Y., a corporation of New York
Application October 19, 1934, Serial No. 749,010
12 Claims. (Cl. 292—328)

9. A seal, comprising a body having laterally spaced vertically extending shackle leg receiving chambers open at their upper ends and each having laterally offset internal stop shoulders, a shackle loop having leg portions provided with lock spurs insertable in said chambers whereby said lock spurs snap beneath the stop shoulders thereof, and a button of compressible material engaged through said body and adapted to be de-

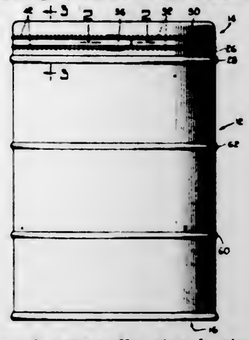
formed by compression, whereby, if compressed prior to insertion of the shackle, its shank will be



expanded so as to prevent insertion of said shackle and movement thereof into normal locked engagement with said body.

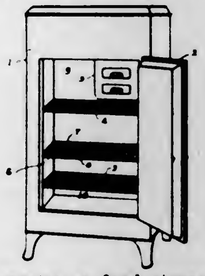
2,006,043
SYNTHETIC RESIN
Harry B. Dykstra, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 19, 1933, Serial No. 652,573
20 Claims. (Cl. 260—4)

1. The process of producing phenol-aldehyde resins which comprises condensing with an aldehyde a phenol containing an unsaturated open chain hydrocarbon substituent and having at least two of the readily reactive positions unsubstituted.



2,006,044
CABLE CLAMP
Jess W. Fowler, Houston, and Christie N. Baillio, Beaumont, Tex.
Application June 5, 1933, Serial No. 674,362
1 Claim. (Cl. 24—115)

A cable clamp comprising a pair of opposing, approximately rectangular clamp jaws, each jaw having an inwardly thickened longitudinal central portion, confronting seats in said thickened portions extending longitudinally from end to end thereof, each seat having parallel spiralled grooves, said seats and grooves being shaped to conform to the contour of and to snugly receive a wire cable, a spacer block between the jaws and approximately of the same length as the jaws, the opposite sides of the said block being provided with cable seats which confront the seats of the respective jaws and which are shaped to snugly receive a wire line, said jaws having marginal bearings, bolts fitted through the bearings of the respective jaws and having heads on one end and nuts on the other end, one of said clamp jaws having an external central longitudinal rib against which the bolt heads abut to maintain the bolts against turning.



2,006,045
SHEET METAL CAN AND RIP STRIP THEREFOR
Arthur G. Hopkins, Maspeth, N. Y., assignor to National Can Company, a corporation of Delaware
Application July 27, 1932, Serial No. 625,090
3 Claims. (Cl. 220—54)

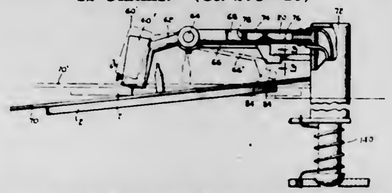
1. A sheet metal container comprising a wall provided with a rip strip, said rip strip being defined by a pair of parallel score lines extending around the wall and further including means to prevent tearing, said means consisting solely of

a plurality of outwardly struck simple smooth elongated continuous beads or channels extending around the wall in parallel relation to the score lines and within the said score lines.

2,006,046
SHUTTER TYPE PARTITION FOR REFRIGERATORS
Norman C. Huckestein, Pittsburgh, Pa.
Application May 2, 1932, Serial No. 608,588
1 Claim. (Cl. 62—47)

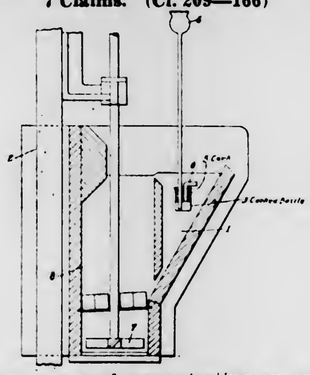
In a refrigerator, a food storage chamber, a partition dividing said chamber into upper and lower compartments, said partition consisting of a perforated shelf insulated from the walls of said chamber to make an air tight joint with said wall, a freezing unit in the upper compartment and a shutter for opening and closing the perforations of the partition, said shutter when closed providing circulation of the cooling medium in the upper compartment only and, when opened, providing circulation of the cooling medium in both compartments.

2,006,047
CLASP OR CONNECTER FOR WATCH BRACELETS AND THE LIKE
Sylvester A. Johnson, North Providence, R. I., assignor to A and Z Chain Company, Providence, R. I., a corporation of Rhode Island
Application October 24, 1933, Serial No. 694,953
13 Claims. (Cl. 24—71)



1. In a device of the type indicated, the combination of a channel-shaped clasp-member providing opposite parallel faces with a space therebetween, an adjusting member slidable in the space between the opposite faces of the clasp-member and having opposite faces for frictional engagement therewith, and means for expanding

the adjusting member to frictionally grip the spaced faces on the clasp-member whereby the

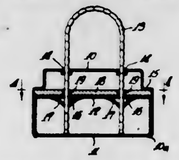


adjusting member may be locked in any position throughout the length of the clasp-member.

2,006,048
PHONOGRAPH
Lester L. Jones, Oradell, N. J., and Thomas E. Piazze, Brooklyn, N. Y., assignors to Technidyne Corporation, New York, N. Y., a corporation of New York
Application January 8, 1930, Serial No. 419,265
12 Claims. (Cl. 274—10)

3. An automatic phonograph comprising a reproducer, a horizontally reciprocable reproducer arm for carrying said reproducer, said arm being articulated at an intermediate point in order to permit of oscillation of the reproducer toward and from the record, a turntable, means to raise the turntable and a record carried thereby into playing contact with the reproducer, and means for locating the reproducer near the periphery of the record comprising a stop on the phonograph chassis and means on the articulated portion of the reproducer arm extending rearwardly therefrom for engaging the stop when the reproducer arm moves to a level lower than when resting on a record, said means being moved below and disengaged from the stop when the reproducer arm is moved upwardly by a record to be played.

2,006,049
CONCENTRATION OF ORES BY FLOTATION
Cornelius H. Keller, San Francisco, Calif., assignor to Minerals Separation North American Corporation, New York, N. Y., a corporation of Maryland
Application July 27, 1932, Serial No. 624,965
7 Claims. (Cl. 209—166)

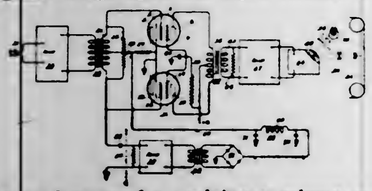


1. The process of concentrating an ore which consists in dispersing in an alkaline ore pulp, an appreciable amount of separately prepared free xanthic acid but in a proportion of less than 0.05 pound per ton of solids in the pulp, agitating such pulp with a further agent such as will produce a floating concentrate, and separating the float.

2,006,050
EXTENDIBLE CLASPING DEVICE FOR WATCH-BRACELETS AND THE LIKE
Charles H. Kestenman, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a corporation of Rhode Island
Application May 25, 1933, Serial No. 672,742
17 Claims. (Cl. 24—71)

1. In a device of the type specified, the combination of a member adapted for connection to one end of a bracelet, a second member slidable on the first member and adapted to be connected to the opposite end of the bracelet, ratchet means on one of said members, latch means on the other member engageable with the ratchet means for retaining the members in adjusted relationship, and means slidable longitudinally of said members to release the latch means from the ratchet means.

2,006,051
SEAL
Frank Keidel, Elmhurst, N. Y., assignor to The International Seal and Knot Protector Co., New York, N. Y., a corporation of New York
Application June 21, 1934, Serial No. 731,611
4 Claims. (Cl. 292—328)



2. A seal including a hollow body having apertures in one wall thereof, and a shackle having legs adapted to pass through said apertures and abut the opposite wall, a plate within the body and having resilient portions to prevent the withdrawal of the shackle legs therefrom, and a separate hard substantially inflexible metal plate also within the body to prevent twisting of the shackle legs therein, said shackle being of flexible wire and of non-circular cross-section, and said plate having shackle legs receiving apertures therein of a cross-section corresponding to the cross-section of the legs.

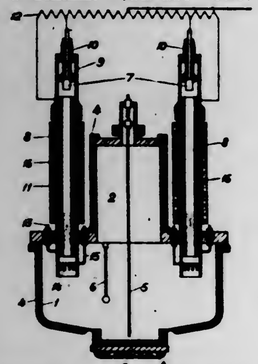
2,006,052
AMPLIFIER
Barton Kreuzer, Rockaway Park, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 30, 1933, Serial No. 691,596
17 Claims. (Cl. 179—171)

2. An audio-frequency amplifier comprising a pair of exponential electric-discharge tubes connected in balanced relation, means for impressing

a signal voltage upon the input circuit of said

tubes, and means for applying a volume control voltage to the grids of said tubes.

2,006,053



GASEOUS DISCHARGE CONVERTER

Uno Lamm, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden

Application July 3, 1933, Serial No. 678,987

In Sweden July 4, 1932

6 Claims. (Cl. 250—27.5)

1. In gaseous discharge converters using gas of low pressure as a conducting medium, a gas receptacle, a cathode therein, tubes of insulating material projecting from said receptacle, anodes in the outer ends of said tubes, and conductors extending longitudinally inside said tubes having a sufficient resistance for supporting between their ends practically the maximum potential difference between anode and cathode without being overheated.

2,006,054

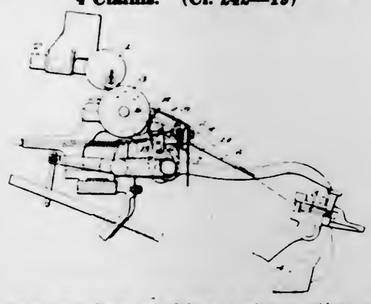
FASTENER-APPLYING IMPLEMENT

Arthur H. Maynard, Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine, a corporation of Maine

Application May 5, 1933, Serial No. 669,485

19 Claims. (Cl. 1—49)

1. In a fastener-applying implement, the combination of a pair of pivoted plier-handles, a reciprocable driver for driving the fasteners into the work, a lever pivoted at one end and connected at its opposite end to the driver, and means on one of the handles engaging the lever at a point intermediate its ends and slidable longitudinally thereon to rock the lever to reciprocate the driver.



2,006,055

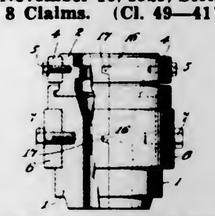
LAP ARRESTER FOR WINDING MACHINES

John O. McKean, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a corporation of Massachusetts

Application June 20, 1933, Serial No. 676,621

4 Claims. (Cl. 242—19)

1. In a winding machine, a stop motion cover, means pivoted to the under side of the stop motion cover, said means having a roughened portion adapted for contact with a lap, and a thread-severing means carried by said means.



2,006,056

RING HOLDER LOCK

William L. McNamara, Connellsville, Pa., assignor to Capstan Glass Company, Connellsville, Pa., a corporation of Delaware

Application November 16, 1929, Serial No. 407,630

8 Claims. (Cl. 49—41)

1. In a device of the class described, the combination of a pair of members pivoted together about a vertical axis to swing in a substantially horizontal plane and adapted to extend about and support a split ring associated with a glass mold, the free end of one of said members having a groove at the outer periphery thereof, the other of said members having a horizontally extending tongue thereon and in a direction transversely of the axis of the pivot whereby said tongue and groove co-operate with each other to lock said split ring accurately in position when it is closed to prevent relative vertical movement therebetween.

2,006,057

VULCANIZATION OF RUBBER

Alfred J. Northam, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 22, 1933, Serial No. 686,249

14 Claims. (Cl. 18—53)

1. The method of treating rubber which comprises incorporating in a rubber mix, prior to vulcanization, a small amount of a thiuram polysulfide accelerator derived from a secondary amine, together with a small amount of a thiuram monosulfide accelerator derived from a secondary amine.

2,006,058

PROCESS OF MAKING AMINES AND DIAMINES AND PRODUCTS OF SAID PROCESS

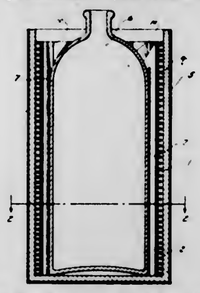
John F. Olin, Dayton, Ohio, assignor to The Sharples Solvents Corporation, Philadelphia, Pa., a corporation of Delaware

No Drawing. Application May 14, 1931, Serial No. 537,481

10 Claims. (Cl. 260—127)

1. A composition of matter comprising essentially the isomeric primary amyl amines formed as the reaction product between ammonia and the mixture of chlorpentanes derived from direct chlorination of pentanes with heat.

6. A method of making lower alkyl amines that favors the formation of poly-alkyl amines which comprises heating alkyl chloride with ammonia in less amount than about twice the theoretical amount required to react with the alkyl chloride and with an inorganic base capable of forming substantially irreversible salts, and recovering the alkyl amines resulting from the reaction.



2,006,059

HEATER

Dagobert W. Rudorff, Berlin-Wannsee, Germany

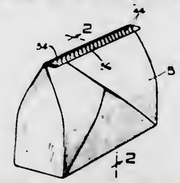
Application May 23, 1933, Serial No. 672,383

9 Claims. (Cl. 219—43)

1. In apparatus of the class described and intended for heating an article, the combination of a metallic container into which the article may be placed, means to heat the walls of the container externally, and resilient heat transmitting elements adapted, when the article is placed in the container, to engage the inner wall of the container and the article to be heated.

2,006,060

SIFTPROOF PACKAGE AND METHOD OF MAKING THE SAME



Theodore Schilder and Gustav Erlemann, New York, N. Y., assignors to Fred Goat Co., Inc., New York, N. Y., a corporation of New York

Application January 21, 1933, Serial No. 652,848

19 Claims. (Cl. 229—62)

1. A finished bag, the said bag in finished state having bottom and side walls, the top of said bag being gathered and folded with a double fold, the inner fold bringing the gathered material in a generally horizontal plane, and the outer fold causing the outer portion of the gathered material to be bent back upon itself, the thus folded gathered material being secured together and the outer fold locked by a series of indentations or perforations in the reversely folded material.

8. A package comprising a carton and a bag carried therewithin, said bag having bottom and side walls, the top of the bag being gathered to-

gether and bent horizontally at an inner fold, and the horizontally extending material being upwardly and reversely bent to form an outer fold, the carton being dimensioned in a vertical direction to just receive the bag with its folded top, whereby the bag is held in closed condition by the carton.

2,006,061

LIGHTER

Ralph H. Segal and Theodore I. Segal, Brooklyn, N. Y.

Application January 15, 1934, Serial No. 706,751

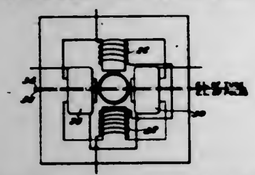
7 Claims. (Cl. 67—7)

1. A lighter comprising a pair of telescopicable receptacles, outer and inner respectively, the inner receptacle having a chamber, a catalyzer fixed in said chamber, the outer receptacle having an opening to the atmosphere, said opening registering with said chamber only when the receptacles are telescoped, said inner receptacle adapted to hold vaporizable fuel, means of communication between the inner and outer receptacles for the vapor to expand when the receptacles are urged apart, and means of communication between said inner receptacle and said chamber to impart the vapor to the catalyzer when the receptacles are telescoped.

2,006,062

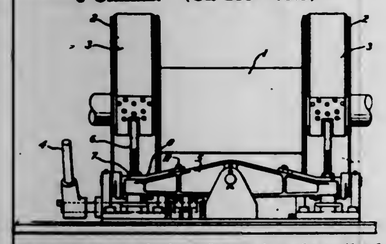
SAFETY RAZOR

Nicholas Testi, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware



Application April 17, 1931, Serial No. 530,809

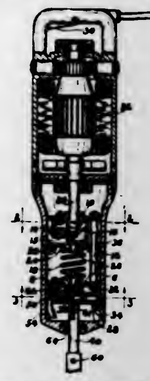
4 Claims. (Cl. 30—12)



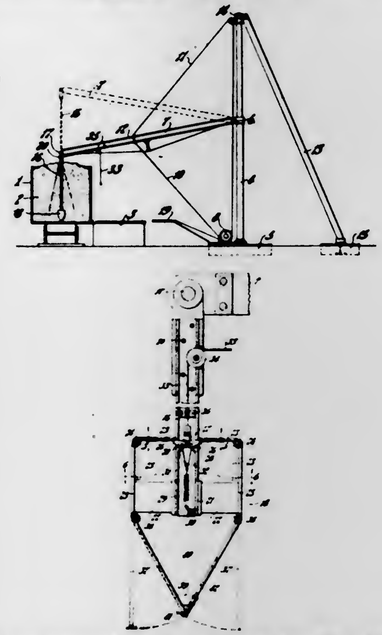
1. An adapter for safety razors having guard teeth, comprising a plate member provided with means for engaging the outer portion of the guard teeth of the razor, and means on the perimeter of said plate member for guiding both transversely and longitudinally into shaving position within the razor, a blade having a large internal clearance aperture, said adapter being box-shaped and thus designed for external contact only with the razor, whereby the adapter may be readily removed from the latter when the elements thereof have been assembled.

2,006,063
CATHODE RAY APPARATUS
Arthur W. Vance, Camden, N. J., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application October 15, 1932, Serial No. 637,885
3 Claims. (Cl. 250—27.5)

1. Cathode ray apparatus comprising screen structure, means for developing a ray of electrons and directing the ray at one side of said structure, and means for deflecting said ray to cause the same to scan said structure, said deflecting means comprising coils disposed respectively on opposite sides of the axis of said ray-developing means, the turns of one coil being substantially greater in number than the turns of the other coil.



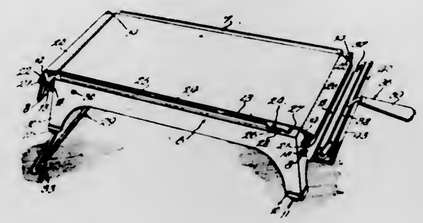
2,006,064
NUT LOCK DEVICE
Forrest J. Young, Los Angeles, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application September 18, 1933, Serial No. 689,941
6 Claims. (Cl. 188—79.5)



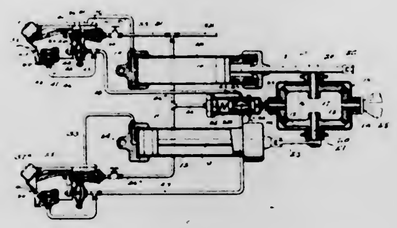
1. In a device of the character described, the combination of a drum, a brake rim non-rotatively mounted relative to said drum, releasable frictional brake means operatively associated with the brake rim to arrest the rotation thereof, an adjusting means for the brake means including a rotatable member, detachable means having a handle extension adapted in one position to engage the rotatable member to hold the same in adjusted position, and means to releasably hold said detachable means in said position, said detachable means upon being released from the first position being adapted upon manual actuation to impart rotation to the rotatable member.

2,006,065
PORTABLE POWER HAMMER
Joseph H. Blake, Seattle, Wash.
Application January 27, 1934, Serial No. 708,682
4 Claims. (Cl. 255—42)

1. In a power hammer the combination with a housing, a rotary cam shaft journaled therein, an arcuate cam of said shaft, and operating means for the shaft, of a reciprocable striking assembly mounted in the housing having a cam roller in the path of the cam, a spring for actuating the assembly, a striker mounted in the assembly, a ratchet device connected to the striker, a spring pressed cam arm for actuating the ratchet, and a cam arm reciprocable with the striking assembly for actuating the pivoted cam arm.



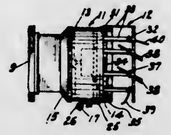
2,006,066
METHOD OF AND APPARATUS FOR SAMPLING ANTHRACITE COAL
Arthur N. Brooks, West Springfield, Mass.
Application February 2, 1935, Serial No. 4,678
4 Claims. (Cl. 214—17)



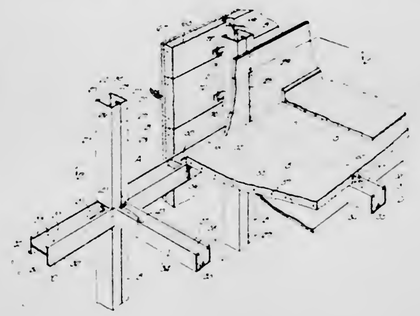
1. In combination, in an apparatus for obtaining a sample of material for the purpose described, a receptacle, pivotally attached closure means connected to the lower edge of the receptacle, means for normally closing the said closure means, pivotally connected closure means at the upper edge of the receptacle which is in normally closed position, means for inserting the receptacle into a mass of material, means for opening the closure means at the upper edge of the receptacle to allow the material to enter the receptacle, and means for withdrawing the filled receptacle from the mass of material.

2,006,067
DUPLICATING MACHINE
Frank Chesley, Cincinnati, Ohio
Application December 2, 1933, Serial No. 700,693
7 Claims. (Cl. 101—131)

1. In a duplicating machine, a table, a printing element mounted on said table, an adjustable stand for said table pivoted at the rear end thereof, said table including a downwardly extending flange at its rear end, and said stand engaging said flange for limiting rearward swinging movement of the stand, whereby the stand supports the rear end of the machine in elevated position.



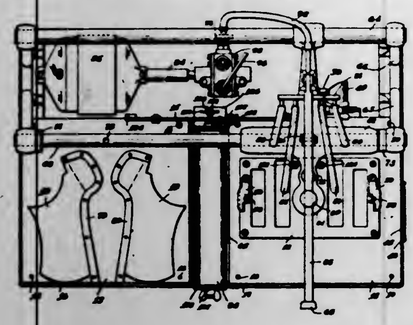
2,006,068
GARMENT OR IRONING PRESS
Ernest Davis, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a corporation of New York
Application April 6, 1928, Serial No. 267,981
Renewed September 2, 1932
32 Claims. (Cl. 68—9)



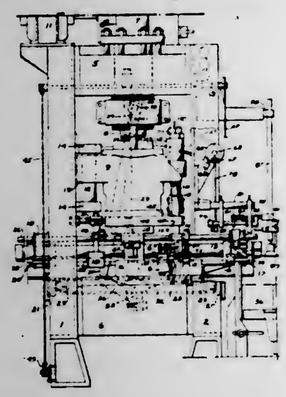
7. An actuating mechanism for pressing machines comprising a driven member, a pair of actuators, motion transmitting means between the actuators and the driven member to transfer and equalize the movement of the actuators to the driven member, and operator-operated means individual to the actuators for controlling the actuation of each.

2,006,069
AIR CIRCULATING APPARATUS
Fred J. Day, Los Angeles, Calif.
Application April 24, 1933, Serial No. 667,644
3 Claims. (Cl. 98—7)

1. In a refrigerator car, an air circulating unit comprising a casing having a fan therein, means to support said unit on the wall of the ice bunker of said car to direct the upper portion of the air current from said fan longitudinally of said car, there being an air space immediately below said unit and adjacent to the wall of the ice bunker, and a series of vertically arranged adjustable air deflector plates carried by the front portion of said unit, said deflector plates being located between the bunker wall and the central portion of the car, the lowest plate of said series having its lower portion inclined rearwardly toward the bunker wall and being adjustable to a position wherein it directs backwardly under said unit and diagonally against said wall the lower portion of the air current from said fan.



2,006,070
BUILDING CONSTRUCTION
Joseph Di Stasio, Newark, N. J.
Application January 8, 1934, Serial No. 705,754
5 Claims. (Cl. 72—1)

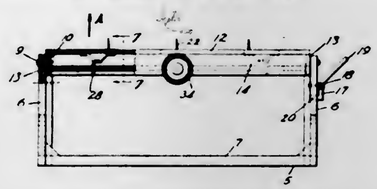


1. In a structure of the type described, a hollow metallic column member adapted to receive plastic molding material, said column being provided with openings in its side walls, supporting projections struck from the side walls of said hollow columns, hollow metallic beam members having closed ends provided with openings adapted for registration with the openings in the columns when the beam members are in position thereon, means projecting from the sides of said column members for supporting the beam members in position, means passing through the registered openings in columns and the closed ends of the beam members for securing the beam members to the column members, said last mentioned means comprising strips of metal extending substantially into the column members and into the beam members for anchoring in the plastic material, a projection on each strip, an opening through each strip, and a wedge member through the opening of the strip to clamp the column member and the beam member between the wedge and the projection on the fastening means.

2,006,071
ASSEMBLING MACHINE
Herbert E. Edwards, Brookline, Mass.
Application July 6, 1931, Serial No. 548,745
28 Claims. (Cl. 12—52)

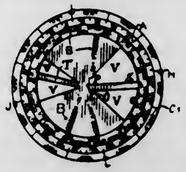
1. In an assembling machine, the combination with means for supporting separately the parts to be assembled, of means having continuous suction for assembling the parts.

2,006,072
BLANKING PRESS
Walter Ferris, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application May 20, 1933, Serial No. 671,953
10 Claims. (Cl. 164—20)



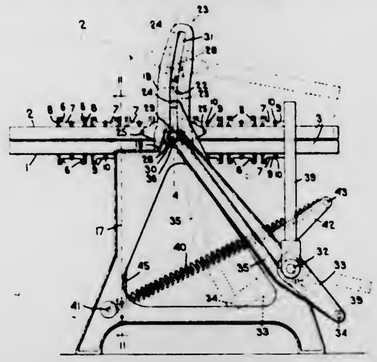
1. A blanking press, comprising feed mechanism for feeding a strip of work step by step through the press, a stationary die and a movable die arranged upon opposite sides of the path of said strip, means for reciprocating said movable die toward and from said stationary die to enable said dies to form blanks in succession from said strip, a shear arranged at a given distance from said dies and having one of its blades fixed in a stationary position, and means responsive to the end of said strip reaching a given position relative to said dies for effecting operation of said shear to cause it to trim from the trailing end of said strip that part which would partly overlie said stationary die during a succeeding reciprocation of said movable die.

2,006,073
IMPROVED WRENCH
Herbert W. Harrer, New Washington, Ohio
Application January 16, 1934, Serial No. 706,808
Renewed February 4, 1935
2 Claims. (Cl. 81—127)



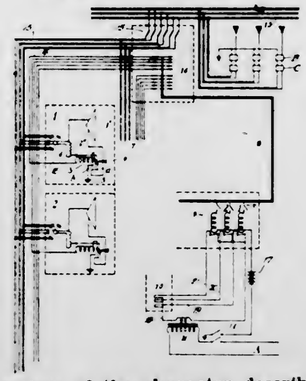
2. A wrench comprising a fixed jaw, a movable jaw, shanks extending at right angles to said jaws and slidably connected together, a slot extending longitudinally of the movable jaw shank having ratchet teeth along its upper edge, a handle having a bifurcated end straddling said shanks and pivotally connected to said fixed jaw, a yoke disposed in the base of the bifurcation of the handle and straddling the shank of the movable jaw, a pin extending through said yoke and slot of the movable jaw, a pin extending through said yoke and slot of the movable jaw shank having its ends movably mounted in slots in the walls of the bifurcation, a stem depending from said yoke through an opening in said handle, a coil spring mounted on said stem normally holding said pin in engagement with said ratchet teeth and a lever pivotally mounted in said handle and connected to said stem, for actuating said yoke to release said pin from engagement with said ratchet teeth.

2,006,074
CUTTING TABLE
Robert B. Knight and Laskar Kahn, Denver, Colo., assignors to The Colorado Bedding Company, Denver, Colo.
Application May 15, 1934, Serial No. 725,747
5 Claims. (Cl. 164—78)



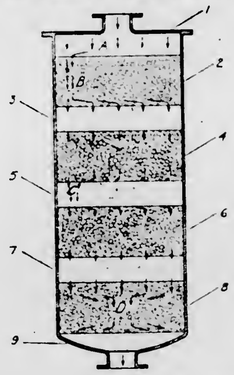
1. A cutting table comprising a top, slides movable along an edge thereof, upwardly projecting pins carried by the slides, and mechanism for moving the slides to vary the distance between their pins, including screw-shafts beneath the top, in driving relation to the slides, a drive shaft, and gearing for rotation of the screw-shafts by rotation of the drive shaft.

2,006,075
STAR AND TIME FINDER
Benjamin F. Lofgren, Salt Lake City, Utah
Application June 26, 1933, Serial No. 677,590
4 Claims. (Cl. 35—3)



1. In a device as described, a circular plate containing a concentric circle marked to represent the hours in a day, a large part of said plate being cut away about the center, in combination with a second plate containing markings about a central point which represent various heavenly bodies about the celestial axis in their relative angular positions known as right ascension and containing a circle marked to represent the days in a year, a part of said second plate being cut away near the central point in the position which represents Polaris and parts cut away so as to leave visually distinguishable in star light a spoke along the radius which represents the right ascension of a particular bright star, a plumb-line suspended from the central point of said second plate, means to attach said plates so they are relatively rotatable, and a marker which shows the angular position of the first said plate in relation to said second plate.

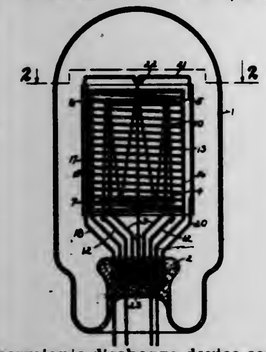
2,006,076
MATTRESS-TUFTING DEVICE
Wilfred B. Mathewson, North Weymouth, Mass., assignor to United Mattress Machinery Company, Quincy, Mass., a corporation of Maine
Application February 20, 1934, Serial No. 712,201
12 Claims. (Cl. 112—3)



1. A mattress-tufting device comprising a supporting frame, two compressing members between which the mattress is compressed, a rock shaft journalled in the supporting frame below the compression members, two arms fast on the rock shaft, links connecting the arms to the ends of one of said compressing members at the central portion thereof, means to rock the rock shaft thereby to move the latter compressing member toward and from the other compressing member, and means to guide the movable compressing member in its movement.

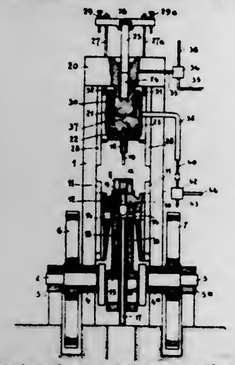
2,006,077
CENTRALIZED RADIO SYSTEM
Burt E. Moritz, Jr., Denver, Colo., assignor to K. G. M. Radio Corporation, Denver, Colo., a corporation of Colorado
Application September 3, 1932, Serial No. 631,695
2 Claims. (Cl. 179—7.1)

1. A system of the character described comprising a central station having units for receiving a plurality of programs simultaneously, a plurality of subscriber's stations each including a selector for selectively connecting it to said units, a control connector individual to each subscriber's station for connecting the subscriber's station to the central station, and a metering device actuated by the control connector for recording the time of connection between the subscriber's station and the central station, said selector being operable to temporarily break connection with the central station in transferring the subscriber's station from one unit to another without stopping the metering device.



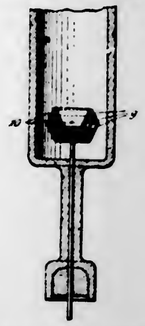
2,006,078
CATALYTIC CONVERTER
Ewald Pyzel, Pittsburg, Calif, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application March 23, 1932, Serial No. 600,668
3 Claims. (Cl. 23—288)

1. A catalytic converter for the synthesis of gases under high pressure comprising a converter shell, at least three alternate layers of coarsely divided uniform catalyst and finely divided uniform catalyst of the same chemical



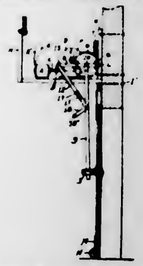
composition, said layers of catalyst being arranged transverse to the gas flow through said converter and in contact with one another.

2,006,079
THERMIONIC TUBE
Frederick E. Terman, Stanford University, Calif.
Application June 22, 1931, Serial No. 546,024
4 Claims. (Cl. 250—27.5)



1. A thermionic discharge device comprising an anode, a filamentary cathode disposed to enclose a central space, and a filamentary electrode mounted within the space and connected to said anode.

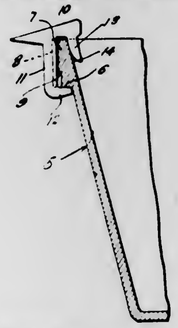
2,006,080
EXTRUSION PRESS
Adolf Wefing, Witten-Ruhr, Germany, assignor to Tubus A. G., Zurich, Switzerland
Application March 7, 1934, Serial No. 714,421
In Germany December 12, 1931
10 Claims. (Cl. 207—3)



1. In an extrusion press, a vertical frame, an upper male extruding tool, a lower carrier member supporting a billet- and die-container and provided with a longitudinal bore for extrusion of a billet therethrough, said tool and carrier member being mounted in the frame for reciprocation relative to each other, a pair of crank shafts mounted in the frame below the carrier member with their crank pins coaxially aligned, a hollow connecting rod connected to said carrier member and cranks, the bore of the connecting rod being aligned with that of the carrier member and the connecting rod being provided with a slot through one side, thereby providing a passageway for the extruded article, driving means for said cranks, and auxiliary driving means for said male tool.

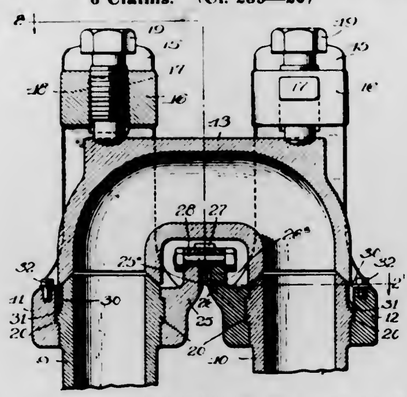
2,006,081
ELECTRODE FOR VAPOR ELECTRIC DEVICES
William T. Anderson, Jr., and Lester F. Bird, Newark, N. J., assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J., a corporation of New Jersey
Application March 2, 1934, Serial No. 713,630
7 Claims. (Cl. 176—122)

1. A self-heating incandescent activated electrode for vapor electric discharge devices comprising at least two pieces of core metal, a layer of a material of variable heat conductivity comprising a metallic compound of the group including aluminum, zinc, and zirconium, separating the core pieces substantially throughout their area in such a way that when the electrode structure is cold, heat is poorly conducted from one piece of the core metal to another piece of the core, and so that heat is readily conducted between the parts of the core materials when the electrode is at an elevated temperature to provide a self-regulating temperature control for the portion of the electrode that is exposed to electronic or molecular bombardment by an automatically effective increase in the radiation surface and mass of the electron emissive surface, and means to electrically connect the parts of the laminated core structure.



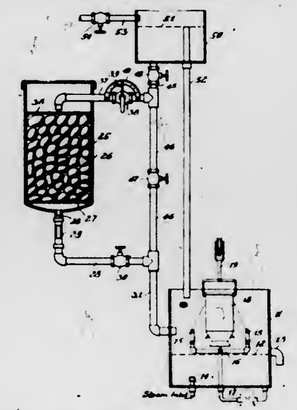
2,006,082
DOOR OPERATING MECHANISM
James E. Bancroft, Richmond, Ind., assignor, by mesne assignments, to The Richmond Fireproof Door Company, Richmond, Ind., a corporation of Indiana
Application August 17, 1934, Serial No. 740,207
6 Claims. (Cl. 268—74)

1. In a door operating mechanism, the combination of a motor driven speed reducer having a gear wheel actuated thereby, a main bar member rigidly secured to said gear wheel, a radius rod pivotally secured at its upper end to the main bar member and in alignment with the center of said



gear wheel, with a connecting bar having one end thereof pivotally secured to one end of the main bar member, a lever member having an aperture formed through the vertex thereof and adapted to be held in pivoted relation to the radius rod through said aperture, a break joint formed by the lever member and the connecting bar, said break joint providing means for releasing a door from its power operating unit without disconnecting any of the pivoted joints.

2,006,083
TURPENTINE CUP AND HANGER THEREFOR
Cornelius Warren Dixon, Jacksonville, Fla., assignor to Claude A. Tompkins, Jacksonville, Fla.
Application May 1, 1933, Serial No. 668,855
2 Claims. (Cl. 47—11)

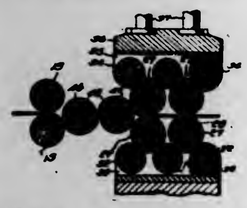


2. A turpentine cup provided exteriorly adjacent its upper end with vertically spaced and alined shoulders, and a lug projecting from the cup with its lower edge coincident with the lower shoulder, said lug having a central vertical groove in its outer side extending across the upper shoulder and having its lower end in the plane of the lower shoulder.

2,006,084
REFINERY FITTING
Clarence B. Harbison, Lima, Ohio, assignor to The Ohio Steel Foundry Company, Lima, Ohio, a corporation of Ohio
Application January 13, 1934, Serial No. 706,464
6 Claims. (Cl. 285—20)

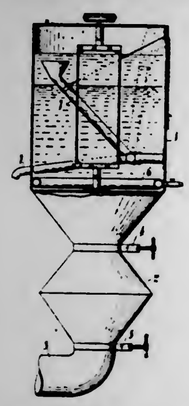
1. In a return bend fitting, two housing parts each having an annular base, a pair of tubes each having one end extending through one of said bases and detachably securable therein by a bayonet joint, said bases being rotatable with respect to each other while in normal spaced relation on their respective tubes, but having means detachably connecting said housing parts together, a U-bend, and means carried by said housing parts for securing said U-bend in pressure-tight engagement with said tube ends.

2,006,085
WASHING APPARATUS
Henry W. Lehmkuhl, Rochester, N. Y.
Application April 1, 1933, Serial No. 663,987
4 Claims. (Cl. 141—7)



1. Washing apparatus of the type including a receptacle for holding a supply of alkaline washing water the alkalinity of which tends to decrease in use, comprising in combination a container, a supply of soluble alkaline material within said container, conduit means connecting said container to said receptacle and providing a free outflow for liquid within said container, a water supply tank for holding water at a substantially constant level above said alkali container, supply conduit means for supplying water from said tank to said container at a point above said alkaline material, so that said water may flow downwardly over said alkaline material to form an alkaline solution flowing thence through said outflow conduit means to said receptacle, and graduated regulating valve means in said supply conduit means for regulating the amount of water supplied to said container to control the amount of alkaline solution flowing to said receptacle.

2,006,086
METHOD OF CARRYING OUT OXIDATIVE FERMENTATIONS BY MOLDS OR FUNGI
Orville E. May, Chevy Chase, Md., Horace T. Herrick, Washington, D. C., Andrew J. Moyer, Takoma Park, Md., and Percy A. Wells, Ballston, Va., assignors to Henry A. Wallace, Secretary of Agriculture of the United States of America
No Drawing. Application August 24, 1934, Serial No. 741,294
6 Claims. (Cl. 260—120)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process for carrying out oxidative fermentations of glucose by submerged growths of fungi under superatmospheric pressure of gases containing substantial quantities of oxygen.

2,006,087
APPARATUS FOR WORKING SHEET METAL
Ralph J. Miller, Youngstown, Ohio, assignor to The McKay Machine Company, Youngstown, Ohio, a corporation of Ohio
Application May 3, 1930, Serial No. 449,609
18 Claims. (Cl. 153—54)

1. Apparatus of the character described comprising upper and lower feed rolls, upper and lower pulling rolls spaced from said feed rolls and defining therewith a path of travel for a sheet passing between said rolls, means for driving all of said rolls whereby said pulling rolls rotate at a greater rate of speed than said feed rolls, sheet working members arranged between said feed rolls and said pulling rolls respectively above and below the normal path of travel of the sheet, and means for projecting said sheet working members through the normal plane of the sheet to an equal extent on opposite sides thereof.

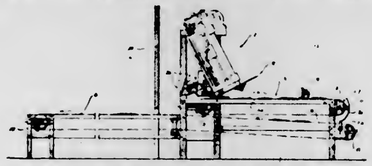
2,006,088
METHOD OF SEPARATING OIL FROM FULLER'S EARTH OR SIMILAR MATERIAL
Edward Ross Mitchell, Sarnia, Ontario, Canada, assignor of one-half to Russel Kendall, Sarnia, Ontario, Canada
Application November 10, 1932, Serial No. 642,047
1 Claim. (Cl. 196—147)

A method of separating oil from fuller's earth, clay or similar material, which comprises mixing in a suitable vessel the oil impregnated material with a briny solution, heating said mixture to substantially the boiling point of the brine solution, the salt forming from substantially 4–6% of the mixture, and allowing said mixture to settle to permit the material to deposit in the bottom of the vessel and the oil to float on the briny solution; and removing the material from below the briny solution.

2,006,089
TURPENTINE CUP AND SECURING MEANS
Claude A. Tompkins, Jacksonville, Fla.
Application June 23, 1933, Serial No. 677,278
2 Claims. (Cl. 47—11)

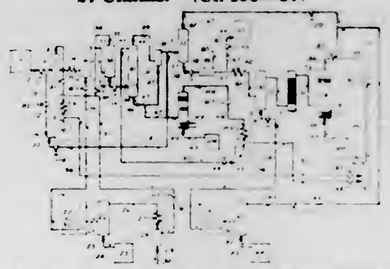
1. A hanger for a turpentine cup comprising a flat elongated horizontal section having a pointed end, a short arm extending vertically downward therefrom, and an intermediate long arm in spaced parallel co-directional relation with the short arm, said long arm having a horizontal lug at its lower end extending toward the short arm.

2,006,090
EXPLOSIONPROOF CABLE CONNECTER
Nils A. Tornblom, Chicago, Ill., assignor to Appleton Electric Company, a corporation of Illinois
Application February 7, 1935, Serial No. 5,501
5 Claims. (Cl. 247—18)



1. A device for making an explosion-proof connection between a cable and a switch box or the like, comprising a casing, means to connect a cable to the casing with its conductors extending into and terminating within the casing, a coupling sleeve adapted at one end to be connected to the casing and at the other end to said box, short wires within and extending through the sleeve, said wires projecting beyond the ends of the sleeve into the casing and the box, respectively, and a sealing medium in the sleeve around the wires and forming an effective barrier to the passage of fluids or flame between the box and the casing.

2,006,091
CONVEYER
Charles T. Walter, Chicago, Ill., assignor, by mesne assignments, to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application April 11, 1932, Serial No. 604,361
9 Claims. (Cl. 146—94)

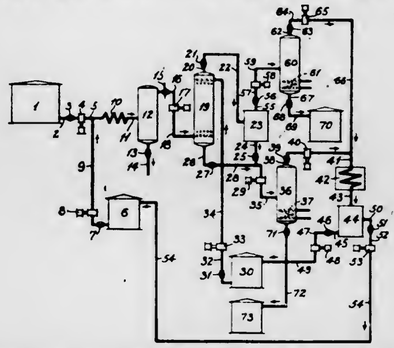


1. The combination with an inclined slicing machine of an initial receiving conveyer having a series of transversely spaced endless conveying and supporting elements each providing top lobes that travel longitudinally in a forward horizontal path towards an inverting mechanism, said inverting mechanism and means comprising an endless final receiving conveyer having a top lobe that travels rearwardly and in a longitudinal direction beyond the rear end of the initial receiving conveyer, the inclined slicing machine being arranged and operated so that the lower

cutting end of the machine deposits successive slices transversely on and across the spaced top lobes of the initial receiving conveyer but with certain of the successive slices in longitudinal overlapping arrangement with respect to the slice immediately preceding, said initial receiving conveyer having operatively associated therewith means for pressing together the overlapping slices and also having associated therewith means en-

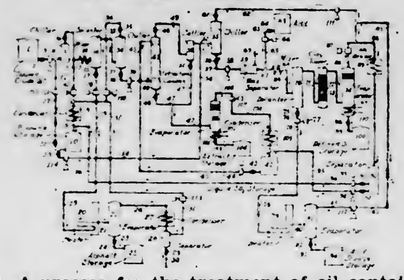
tering and extending from the spaces between the spaced endless conveying and supporting elements and arranged so as to forcedly eject from said conveying elements the pressed-together overlapping slices, the inverting member being associated with the forward end of the receiving conveyer to deliver the pressed-together slices while in an inverted position to and upon the endless final receiving conveyer.

2,006,092
PROCESS FOR PRODUCTION OF LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, and Claude E. Swift, Huntington Park, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application August 4, 1931, Serial No. 555,018
27 Claims. (Cl. 196—37)



1. A process for producing lubricating oil from oil which comprises dissolving said oil in a liquefied normally gaseous hydrocarbon, separating said oil dissolved in said liquefied normally gaseous hydrocarbon into a plurality of fractions with a selective solvent for non-paraffinoid hydrocarbons and subsequently separating the liquefied normally gaseous hydrocarbon and solvent from said fractions.

2,006,093
PROCESS FOR PRODUCING LUBRICATING OILS
Ulric B. Bray, Los Angeles, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application February 23, 1932, Serial No. 594,605
12 Claims. (Cl. 196—13)

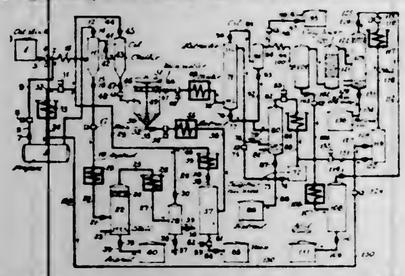


1. A process for producing lubricating oil from residual oil which comprises dissolving said oil in liquid propane, separating said oil dissolved in liquid propane into a plurality of fractions with a solvent and subsequently separating the propane and solvent from said fractions.

10. A process for the separation of oil containing non-paraffinic constituents into fractions which comprises commingling said oil with liquid propane and a solvent having selective solvent

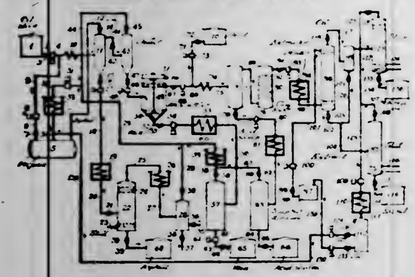
power for non-paraffinic fractions of the oil, separating the oil into a plurality of fractions and separating said fractions.

2,006,094
PROCESS FOR TREATING OIL
Ulric B. Bray, Palos Verdes Estates, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Original application August 4, 1931, Serial No. 555,018. Divided and this application June 12, 1934, Serial No. 730,215
21 Claims. (Cl. 196—37)



1. A process for the treatment of oil containing wax which comprises dissolving said oil in a liquefied normally gaseous hydrocarbon, extracting said oil dissolved in said liquefied normally gaseous hydrocarbon with a selective solvent for non-paraffinoid oil to form a fraction dissolved in said liquefied normally gaseous hydrocarbon containing wax and a fraction dissolved in said selective solvent, separating said fractions, chilling said wax containing fraction dissolved in said liquefied normally gaseous hydrocarbon to precipitate wax and removing the precipitated wax from the oil and liquefied normally gaseous hydrocarbon.

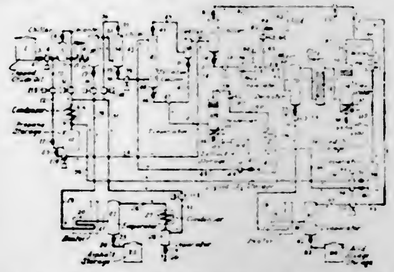
2,006,095
PROCESS FOR THE PRODUCTION OF LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 2, 1933, Serial No. 691,828
13 Claims. (Cl. 196—37)



1. A process for the treatment of hydrocarbon oil containing wax which comprises commingling

said oil with a liquefied normally gaseous hydrocarbon diluent, chilling said oil and diluent to precipitate wax, separating the wax from the oil and diluent, extracting the dewaxed and diluted

oil with a selective solvent for non-paraffinoid fractions to form an oil fraction dissolved in said diluent and an oil fraction dissolved in said solvent and separating said fractions.



2,006,096
PROCESS FOR THE PRODUCTION OF LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 2, 1933, Serial No. 691,829
13 Claims. (Cl. 196—37)

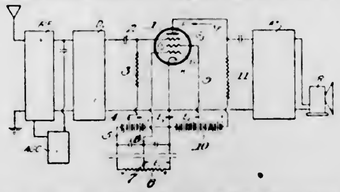
1. A process for the treatment of mineral lubricating oil which comprises dissolving said oil in a liquefied normally gaseous hydrocarbon solvent, treating the diluted oil with sulphuric acid, extracting the acid treated and diluted oil with a selective solvent for non-paraffinoid fractions to form a fraction dissolved in said diluent and a fraction dissolved in said selective solvent and separating said fractions.

2,006,097
PROCESS FOR TREATING OIL
Ulric B. Bray, Palos Verdes Estates, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Original application August 4, 1931, Serial No. 555,018. Divided and this application June 12, 1934, Serial No. 730,214
8 Claims. (Cl. 196—13)

1. A process for the production of lubricating oil from oil which comprises dissolving said oil in a liquefied normally gaseous hydrocarbon diluent, extracting said oil dissolved in said diluent with a selective solvent for non-paraffinoid fractions to form a fraction dissolved in said solvent and a fraction dissolved in said diluent, separating said fractions and treating said fraction dissolved in said diluent with sulphuric acid.

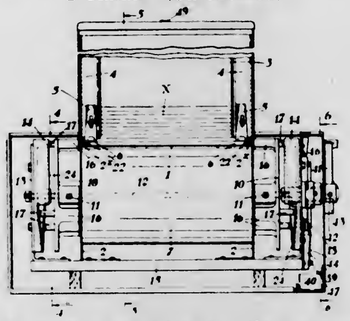
7. A process for the treatment of lubricating oil from oil which comprises dissolving said oil in a liquefied normally gaseous hydrocarbon diluent containing a major portion of propane, extracting said diluted oil with liquid sulphur dioxide to form a fraction dissolved in said diluent and a fraction dissolved in said solvent, separating said fractions and treating said fraction dissolved in said diluent with sulphuric acid.

2,006,098
METHOD FOR PRODUCING LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application January 26, 1935, Serial No. 3,613
15 Claims. (Cl. 196—34)



1. The process for the production of lubricating oil from an oil containing the same which comprises mixing said oil with a liquefied normally gaseous hydrocarbon solvent under superatmospheric pressure sufficient to maintain said solvent liquid, treating said oil dissolved in said solvent with a mineral acid and separating said solvent from the treated oil.

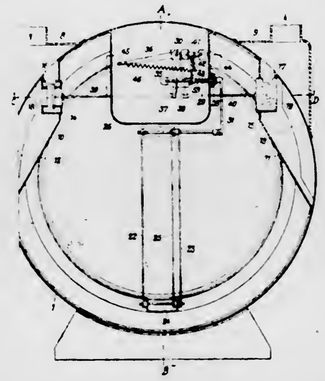
2,006,099
AUDION AMPLIFIER
Paul O. Farnham, Boonton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application August 10, 1933, Serial No. 684,582
4 Claims. (Cl. 250—20)



1. In the operation of an amplifier stage including a tube having a cathode cooperating with a signal grid and anode, the method of reducing the transconductance of the tube from signal grid to anode without increasing the distortion introduced into the amplified output of the tube, comprising the establishing of a positive or accelerating field between the signal grid and cathode, controlling the electron flow from said cathode

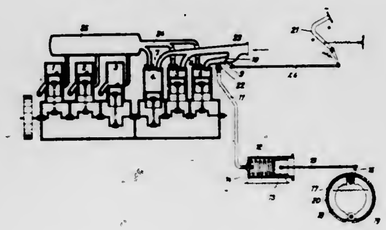
to the region of the positive field and signal grid by a negative field adjacent said cathode, initially impressing on the signal grid such a nega-

tive bias which results in substantially maximum amplification and increasing the signal grid bias in a negative sense as the negative field is increased in magnitude to reduce the stage gain.



2,006,100
VENDING MACHINE
George Fargher Hight and Charles Henry Webb, Middlesex, England
Application November 9, 1934, Serial No. 752,263
In Great Britain February 27, 1933
1 Claim. (Cl. 312—51)

In a vending machine for the purpose described, the combination with a casing including an article container, a support for a pile of folded articles, means for engaging with the folds of the lowermost article and drawing the same from beneath the pile including, at each end of the machine, a non-rotating cam plate, a rotary plate positioned adjacent thereto, a plurality of spring actuated plungers mounted in said rotary plate, a spring actuated finger located in each of said plungers coacting with said cam plate, means for preventing the ejection of said fingers during a part of their travel, a shaft upon which said rotary plates are secured rotatably mounted in said cam plates, and means for imparting a rotary movement to said shaft and to the rotary plates.

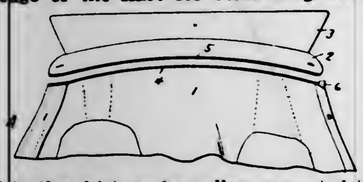


2,006,101
REVERSING MECHANISM FOR DRY GAS METERS
Waldemar Holm, Furstenwalde/Spree, Germany, assignor to N. V. Machinerieen-en Apparaten Fabrieken "Meaf", Utrecht, Netherlands
Application July 3, 1933, Serial No. 678,967
In Germany July 5, 1932
11 Claims. (Cl. 73—1)

10. In a dry gas meter with one diaphragm and with two double seat valves provided with spindles, a reversing mechanism comprising a shaft operatively connected to and actuated by the diaphragm, a guide lever on this shaft, a snap member on this guide lever, another shaft arranged perpendicular to the shaft of the guide lever, a tilting lever provided with two legs on said other shaft, a snap member on one of the legs of the tilting lever, adapted to cooperate with the snap member on the guide lever, a further shaft, a suspending lever on this shaft,

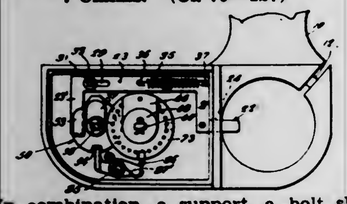
means for operatively connecting the suspending lever with the guide lever, a reversing spring fastened on one end to the other leg of the tilting lever and on the other end to the suspending lever, and means for transmitting the movement of the shaft of the tilting lever to the spindles of the double valves of the gas meter.

2,006,102
BOOSTER BRAKE FOR VEHICLES
Hugo Junkers, Dessau, Germany
Application May 20, 1930, Serial No. 454,059
In Germany June 13, 1929
9 Claims. (Cl. 188—152)



1. In a power plant comprising a scavenging pump operatively connected to a two-cycle internal combustion engine, means for causing an increased vacuum in said pump, and mechanism adapted to be operated by said increased vacuum.

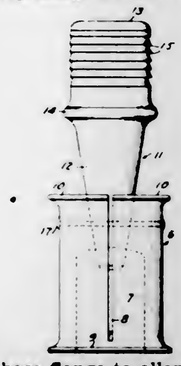
2,006,103
DETACHABLE FASTENING MEANS FOR CONNECTING COLLARS TO SHIRTS
Max Karellitz, Milford, Mass.
Application August 30, 1934, Serial No. 742,184
1 Claim. (Cl. 2—139)



In combination with a shirt having a neck band formed separately therefrom, slide fastener elements secured to the lower portion of the neck band and extending the full length thereof,

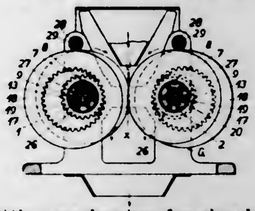
cooperating slide fastener elements on the upper edge of the shirt for connecting the neck

band to the shirt, and a collar connected to the upper edge of the neck band.



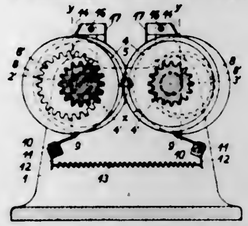
2,006,104
IGNITION AND STEERING LOCK
Irving Knapper, Ossining, N. Y.
Application March 24, 1934, Serial No. 717,250
7 Claims. (Cl. 70—127)

7. In combination, a support, a bolt slidable thereon, a spring urging the bolt toward locking position, a notched cam normally disengaged from said bolt so that the bolt is then in the locking position, means for operating said cam into and out of operative engagement with the bolt, a set of normally upset disk tumblers on the support, each having a notch, second means for manipulating the tumblers so as to align their notches, spring pressed means normally engaging the periphery of said tumblers and the notch of said cam while the tumblers are upset and the bolt is in locking position so as to lock the cam in its disengaged position, said spring pressed means being arranged to move into engagement with the notches of the disk when the tumblers are manipulated so as to bring their notches into alignment in a manner to disengage said spring pressed means from the cam and thereby free the cam to be operated by the cam operating means in opposite directions for withdrawing said bolt from and permitting the bolt to return to locking position, and stop means on said cam, said stop means being positioned during the operative position of the cam to positively prevent disengagement of said spring pressed means from the aligned notches of the tumblers, thereby preventing upsetting of the tumblers while the bolt is in a retracted position, said stop means being arranged to occupy a position while the cam is in its inoperative position in which said stop means engages said bolt in a manner to positively prevent further rotation of the cam away from its operative position.



2,006,105
BOTTOM HOLE WELL PLUG
Charles L. Maguire and Garnett Hadley, Mount Pleasant, Mich.
Application December 12, 1934, Serial No. 757,201
1 Claim. (Cl. 166—13)

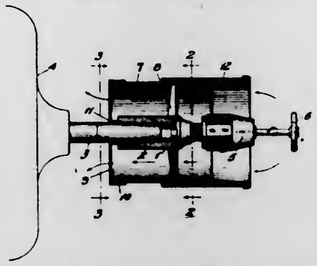
As a new article of manufacture, a cylindrical spool-like body adapted to function as a well closing plug, said body being formed at its bottom with an outstanding annular base flange and formed at its top with a corresponding type anchoring flange, said body having a socket in its bottom and a communicating tapered bore in its top, diametrically opposed portions of said body being formed with longitudinal slits extending through the top flange down to and terminating



short of the base flange to allow the slit portion to expand radially for anchorage purposes.

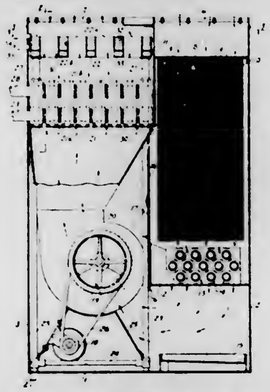
2,006,106
KNIFE MOUNTING FOR MACHINES
Walter Markert, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Muller & Co., Dresden, Germany
Application November 23, 1933, Serial No. 699,457
In Germany August 24, 1933
9 Claims. (Cl. 146—122)

1. A cutting mechanism for shredding tobacco or the like comprising a series of intermeshing cutting disks, flexible spacing disks located between said cutting disks, said spacing disks being provided with gear teeth, ejector rings loosely mounted upon said spacing disks and internal teeth provided upon said ejector rings meshing with the teeth upon said spacing disks.



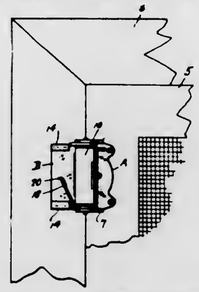
2,006,107
MACHINE FOR CUTTING THIN LEAVES
Walter Markert, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany
Application December 14, 1933, Serial No. 702,395
In Germany April 24, 1933
7 Claims. (Cl. 146—122)

1. A cutting mechanism for shredding tobacco or the like comprising a series of intermeshing



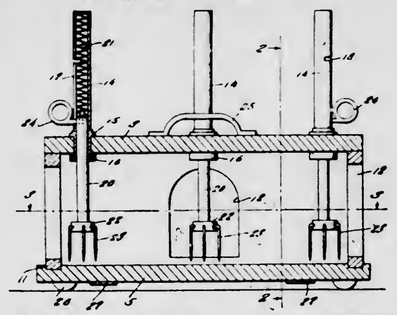
cutting disks, shafts upon which said disks are mounted, ejector rings loosely mounted and located between said cutter disks and means upon said shaft causing a positive rotation of said rings.

2,006,108
DUST COLLECTOR FOR ABRADING TOOLS
Felix C. Montuori, Washington, D. C.
Application October 27, 1934, Serial No. 750,363
5 Claims. (Cl. 51—270)



1. Apparatus of the character described comprising a member adapted to be mounted upon a spindle for rotation therewith and to carry an abrading tool or the like; a housing carried by said member in spaced relation thereto; means associated with said housing for drawing a current of dust laden air from the vicinity of said tool into said housing; and filter means cooperating with said housing for arresting the passage of dust in said current of air and to cause its deposit in said housing.

2,006,109
HEATING AND VENTILATING APPARATUS
Clark T. Morse, Detroit, Mich., assignor to American Radiator Company, New York, N. Y., a corporation of New Jersey
Application September 20, 1934, Serial No. 744,783
8 Claims. (Cl. 257—138)



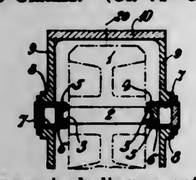
4. In a heating and ventilating unit, a frame independent of a casing enclosing unit, a motor and blower mounted on the lower end of said frame, a blower casing mounted on the bottom of said frame, a plurality of heating units connected together on their sides mounted on top of said frame, said units having a plurality of spaced, gently undulatory fins arranged on the sides thereof in the path of the air delivered from said blower casing, and a plurality of spaced water pans of different elevation having air passageways therebetween mounted on top of said heating units in spaced relationship with respect to them whereby the undulatory motion of the air passed through and between said heating units will not be impeded by said pans.

2,006,110
HINGE
Stephen J. Palinkos, South Norwalk, Conn.
Application December 13, 1934, Serial No. 757,381
1 Claim. (Cl. 16—181)

In combination, a hinge consisting of a pair of leaves and provided with means swingably connecting the same together, a spring for retaining the sections in closed position, an anchor plate, guide structures on the anchor plate for receiving one of the hinge sections, said anchor plate and said mentioned section of the hinge being provided with registering openings, said spring being provided with an extension for engagement into the openings when said openings are registering.

2,006,111
ANIMAL TRAP
Armen Potigian, Davenport, Iowa
Application January 16, 1935, Serial No. 2,127
3 Claims. (Cl. 43—79)

1. A trap of the class described comprising a box-like structure, a plurality of tubes mounted in the upper portion of the box-like structure, shanks slidable in the tubes, springs in the tubes impinged against the shanks to force them downwardly, heads on the lower ends of the shanks, prongs on the heads, said tubes having longitudinally extending slots terminating at their upper ends in lateral branches, and a handle extending from the upper end of the shank through the slots and engageable in the branches, said box-like structure comprising two sections, one section including a bottom with a side wall fixed thereto and rising therefrom, the other section



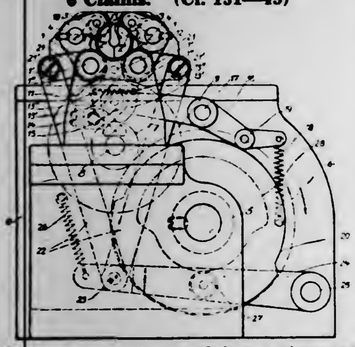
comprising a top panel through which the tubes extend, a side wall fixed to the top panel, and end walls fixed thereto, the bottom being provided with grooves to receive the lower edges of the end walls and the side wall of the upper section, the top panel being hinged to the first mentioned side wall, and means for engaging the second mentioned side wall with the bottom to prevent accidental opening of the box, the walls of the box being provided with entrance openings.

2,006,112

GYROSCOPIC TURN INDICATOR

George Hancock Reid, Kingston-on-Thames, England

Application July 20, 1932, Serial No. 623,681
In Great Britain September 16, 1931
5 Claims. (Cl. 74—5)



5. A gyroscope including a rotor shaft, end bearings therefor, sleeves carrying the bearings, and a support in which the sleeves are mounted, the sleeves and shaft being of metals of the same coefficients of expansion but subjected to different amounts of change under temperature variation incident to their relatively different lengths, the support being constructed of a metal of such coefficient of expansion that the amount of change in the support under temperature variation will compensate for the difference in amount of expansion between the shaft and sleeve.

2,006,113

APPARATUS FOR APPLYING A CIGAR WRAPPER TO A BUNCH

Constantin Friedrich Röber, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany

Application December 21, 1932, Serial No. 648,279
In Germany February 27, 1932
6 Claims. (Cl. 131—45)

1. An apparatus for applying a cigar wrapper to a bunch comprising bunch rollers, a pair of pivoted jaws located adjacent one end of said bunch rollers and flexible means normally urging said jaws together to exert a flexible pressure to hold an end of the wrapper to the end of said bunch to secure a correct application of said wrapper to said bunch at the start of the wrapping operation.

2,006,114

ALIPHATIC-AROMATIC AMINE AND PROCESS OF MAKING SAME

Karl Wilhelm Rosenmund and Fritz Külz, Kiel, Germany

No Drawing. Application February 8, 1933, Serial No. 655,762. In Germany April 27, 1931
9 Claims. (Cl. 260—127)

7. Tertiary amines of the aliphatic-aromatic series having the generic formula

$$R_1—A_1—N(R_3)—A_2—R_2$$

wherein R_1 and R_2 represent phenyl or alkoxy-substituted phenyl groups, A_1 and A_2 represent alkylene chains or phenyl- or alkyl-substituted alkylene-chains of the lower aliphatic series, and R_3 represents an unsubstituted alphyl group of the lower aliphatic series.

8. In the manufacture of tertiary amines of the aliphatic-aromatic series having the generic formula

$$R_1—A_1—N(R_3)—A_2—R_2$$

wherein R_1 and R_2 represent phenyl or alkoxy-substituted phenyl groups, A_1 and A_2 represent alkylene chains or phenyl- or alkyl-substituted alkylene chains of the lower aliphatic series and R_3 represents an unsubstituted alphyl group of the lower aliphatic series; the process which comprises condensing a primary amine of the class consisting of

$R_1—A_1—NH_2$, $R_2—A_2—NH_2$ and $R_3—NH_2$

with a compound selected from a second class consisting of

$R_1—A_1—X$, $R_2—A_2—X$ and $R_3—X$,

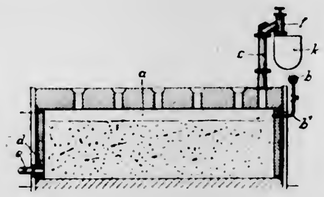
under conditions of reaction producing liberation of HX and with formation of a secondary amine of the class consisting of

$R_1—A_1—NH—R_2—A_2$, $R_1—A_1—NH—R_3$ and $R_2—A_2—NH—R_3$

and condensing the resulting secondary amine with a compound selected from a class consisting of

$R_3—X$, $R_2—A_2—X$ and $R_1—A_1—X$,

respectively, under conditions of reaction producing liberation of HX and with formation of a tertiary amine of the aforesaid generic formula; X being a group capable of uniting with an available hydrogen atom of said amines under said conditions of reaction with liberation of HX.



2,006,115

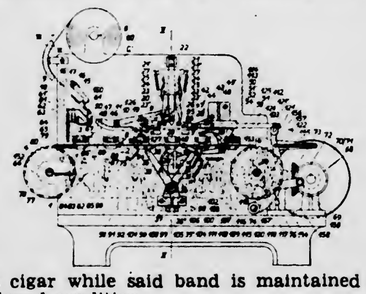
OPERATION OF COKE OVENS AND OVENS THEREFOR

Josef Schaefer, Dortmund, Germany

Application January 30, 1933, Serial No. 654,287
In Germany February 2, 1932
4 Claims. (Cl. 202—15)

1. A method of producing coke and a combustible gas or gases which comprises introducing a combustible fluid capable of being decomposed by heat to yield a combustible gas, at the top and at one end of a horizontally elongated mass of solid carbonizable material which is being carbonized and is in an advanced state of carbonization, causing said fluid to percolate through said carbonized mass in a diagonally downward direction, withdrawing the unaffected and partially affected fluid and the volatile matters developed from the lower opposite end of said mass, immediately introducing the said volatile matters and the unaffected and partially affected fluid at the lower end of a second similar mass of solid carbonaceous material which is likewise in a state of advanced carbonization, causing said introduced material and volatile matters to pass diagonally upward through said second mass, withdrawing the total volatile matters developed at the opposite upper end of said second mass, and then withdrawing coke from both masses.

4. A coke oven battery for producing coke and a combustible gas or gases of the reaction between a carbonaceous material and steam, oil or tar comprising a plurality of horizontal narrow elongated coke oven chambers placed adjacent and parallel to each other, a distribution pipe for the steam, oil or tar disposed transversely of the chambers and extending along one side of said battery at the top thereof, means connecting said pipe with one end of the upper portion of each of the individual chambers, valve means for controlling said connecting means so that the flow from the distribution pipe to any of the chambers may be cut off, means at the opposite end of said chambers at the bottom thereof for directly connecting each of the chambers with one of the other chambers, said last named connecting means providing a short direct communication between the bottom of each chamber at one end thereof and the bottom portion of the connected chamber at the same end thereof, an ascension pipe at the upper end of each chamber adjacent the distributing pipe connection to said chamber, and valve means operatively connected with said ascension pipes so that the flow from each chamber through its corresponding ascension pipe may be cut off, whereby when the chambers are charged with carbonaceous material in an advanced state of carbonization, steam, oil or tar introduced through the distributing pipe to one upper end of a chamber will percolate diagonally downward through that chamber, thence to the bottom of the connected chamber together with volatile matters developed and diagonally upward through said connected chamber to the ascension pipe thereof.



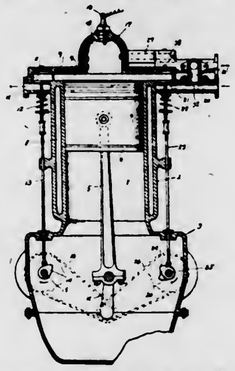
2,006,116

METHOD AND APPARATUS FOR APPLYING PAPER BANDS AND THE LIKE TO CIGARS

Johannes Schmiedel, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik, J. C. Müller & Co., Dresden, Germany

Application June 1, 1934, Serial No. 728,617
In Germany November 22, 1932
16 Claims. (Cl. 131—61)

1. The method of applying bands to cigars and the like comprising severing a band from a strip of flexible material and then applying the same



to a cigar while said band is maintained in a tensioned condition.

2,006,117

INTERNAL COMBUSTION MOTOR

Frank K. Shear, Ravena, N. Y.

Application November 17, 1933, Serial No. 698,508
1 Claim. (Cl. 123—75)

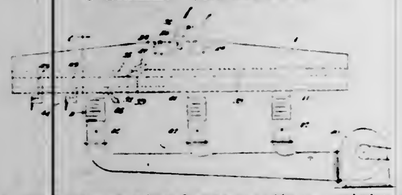
In an internal combustion engine including a cylinder and a piston and a head for the cylinder having a fuel chamber therein in communication with the cylinder, an air supply connected with the outer end of the cylinder, a fuel supply connected with the fuel chamber, valves for controlling said supply, springs for normally holding the valves closed, means for opening the air valve at the beginning of the suction stroke of the piston and permitting the valve to close when the piston reaches a certain point in its suction stroke, means for simultaneously opening the fuel valve as the air valve is closing, whereby air is drawn into the cylinder at the beginning of the suction stroke and fuel is drawn into the fuel chamber for the rest of the stroke after the air valve is closed, said air being compressed by the piston on its compression stroke, the pressure of air compressing the fuel in the fuel chamber, means for firing the fuel in said chamber, a short conduit connecting the air conduit with the fuel conduit, and a valve for closing said short conduit when the valve is in one position and said valve closing the air conduit and placing the short conduit in communication with the air conduit when in another position.

2,006,118

COVER FOR CHICKENS

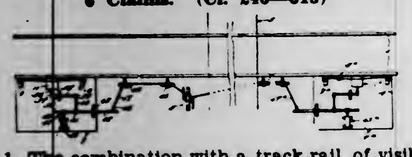
Corinne Sterrett Smith, Walkerton, Ind.

Application June 25, 1934, Serial No. 732,309
2 Claims. (Cl. 119—143)



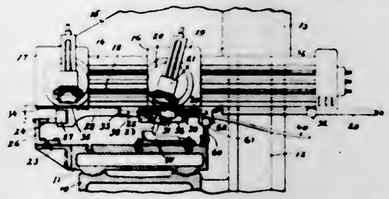
1. A jacket for poultry comprising an elongated member of fabric having a button at one end of

the front part, a strap connected to the opposite end of the front part having a number of buttonholes therein to receive the button, a strap having its ends connected to the end parts of the member slightly in rear of the longitudinal cen-



ter of the member and said strap having a loop at its center through which the first strap passes, the second strap having the portions adjacent its ends passing under the legs, with the parts on each side of the loop converging forwardly to the loop.

2,006,119
APPARATUS FOR THE SEPARATION OF DRY MATERIALS
Joseph Nicholas Steinmetzer, Watermael, Belgium
Application August 16, 1933, Serial No. 685,478
In Great Britain August 10, 1932
5 Claims. (Cl. 209—466)



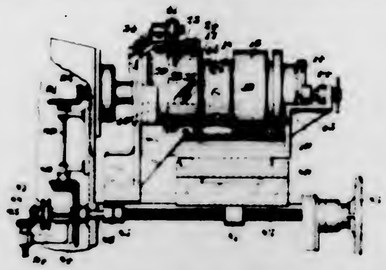
1. In an apparatus for separating a mixture of solid materials having different specific gravities, a vessel for containing said materials, a pair of spring supports for said vessel, a shaft coaxial with said spring supports, a pulley having an eccentric weight thereon mounted on said shaft, and means for rotating said pulley, whereby the axis of oscillation of the vessel is substantially coincident with the axis of rotation of the pulley.

2,006,120
CROSSING SIGNAL
Thomas G. Strynatka, Mirror, Alberta, Canada
Application June 15, 1933, Serial No. 675,977
6 Claims. (Cl. 246—313)

1. The combination with a track rail, of visible signal means including a rotary member, a train operated member mounted adjacent the rail for operation by a train, cam and lever means operatively connected to the train operated member, cable means operatively connected to the cam and lever means and to the visible signal means for operating the same, helical return spring means axially aligned with said rotary member and attached thereto and to another part on the visible signal means ensioning said cable means and operative for returning the visible signal means to initial condition when said train operated member has returned toward initial position after operation.

2,006,121
PROFILING ATTACHMENT FOR PLANERS
Howard A. Tham, Akron, Ohio, assignor to The Mechanical Mold & Machine Company, Akron, Ohio, a corporation of Ohio
Application January 23, 1935, Serial No. 2,979
13 Claims. (Cl. 90—24.3)

1. The combination of a planer having a horizontally reciprocating work table, a tool head movable transversely thereof, a cam movable with the table for positively actuating said head horizontally in one direction, a cam follower connected with the tool head, and hydraulic means continuously exerting a uni-directional thrust on said follower for yieldingly moving said head in the opposite direction, said means having a valve-controlled outlet for relieving the pressure.



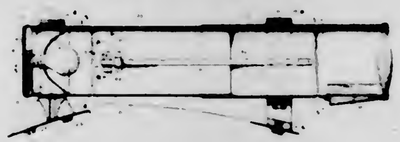
2,006,122
WINDSHIELD DEFROSTING DEVICE
Ben Weller, Midwest, Wyo.
Application February 16, 1935, Serial No. 6,861
8 Claims. (Cl. 20—40.5)

1. An attachment of the class described comprising a spacing element, a carrier arm attached thereto, and a rubber suction cup at the inner end of said arm for fastening it in place.

2,006,123
MILLING MACHINE
Frederick William Whitehead, Bristol, England, assignor to The Bristol Aeroplane Company Limited, Bristol, England, a British company
Application July 9, 1934, Serial No. 734,362
In Great Britain April 19, 1934
5 Claims. (Cl. 90—13.4)

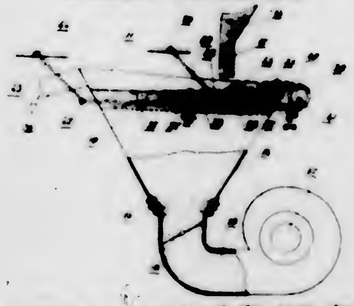
1. A milling machine of the kind set forth comprising, in combination, driving mechanism for reciprocating or oscillating the work-carrier with respect to the cutter, a friction-coupling whereof the driving element is reciprocated or oscillated by the said driving mechanism through a constant large amplitude and whereof the driven element drives both the work-carrier with respect to the cutter, and a former or pattern with respect to an abutment, which abutment thus controls the amplitude of the relative movement

between the work and the cutter in accordance with the shape of the former, and irrespective of



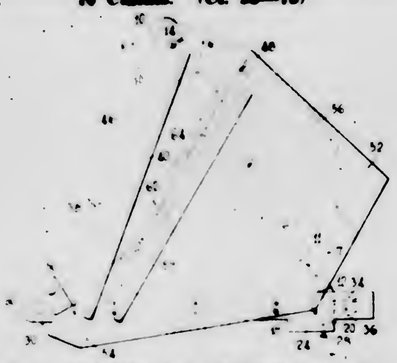
the amplitude of movement of the driving element of the friction coupling.

2,006,124
TELEVISION APPARATUS
John Logie Baird, London, England, assignor to Televisieon Limited, London, England, a British company
Application December 21, 1933, Serial No. 703,245
Renewed April 4, 1935. In Great Britain January 20, 1933
5 Claims. (Cl. 178—6)



5. A television method which comprises scanning an object with a spot of light projected through one aperture in a scanning disc, and scanning a light responsive element through another aperture in said scanning disc with light reflected from said object.

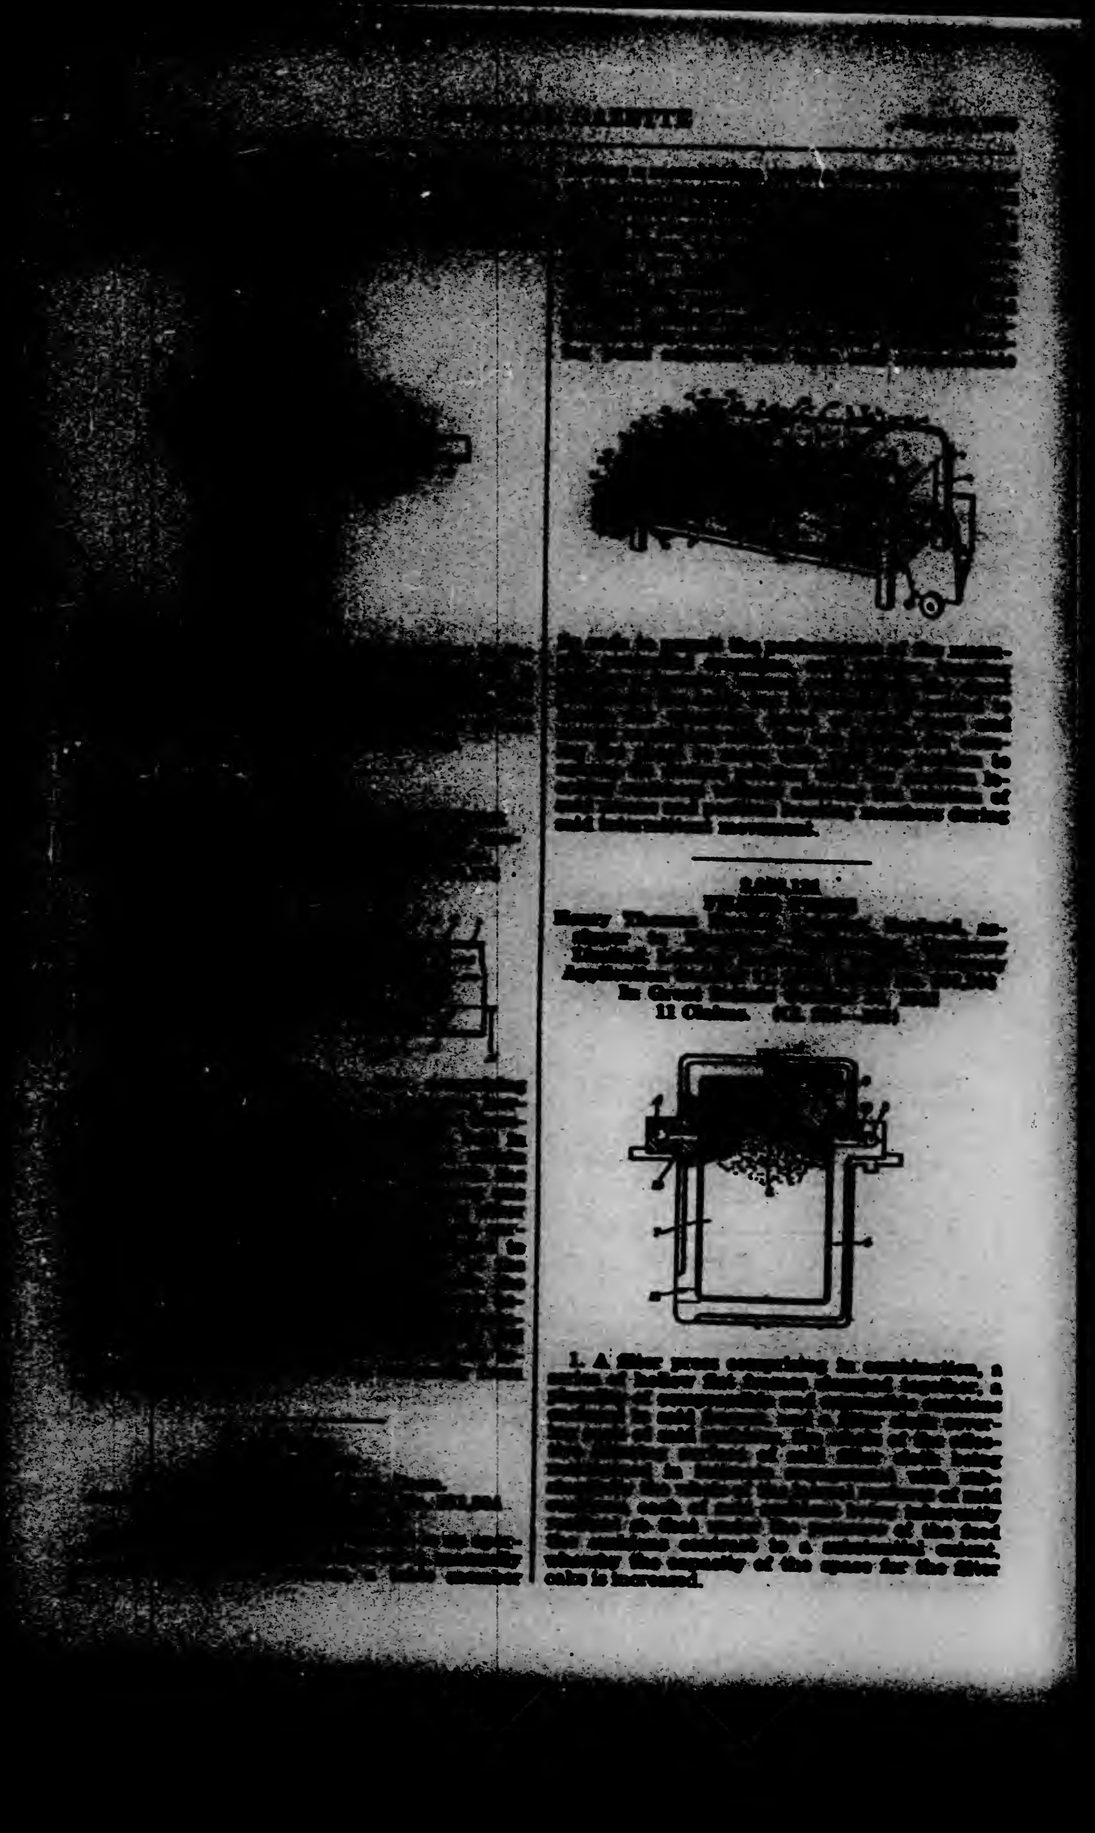
2,006,125
HEADLIGHT
Theodore S. Barber, Wilkes-Barre, Pa.
Application April 12, 1934, Serial No. 720,320
1 Claim. (Cl. 240—41.3)



A headlight comprising an elongated tubular body having a front and a rear section and being slidable on each other, brackets for supporting said sections, the bracket for the forward section having spring adjustable take-up screws extending into contact with said section, a portion of said bracket being hingedly connected, the support for the rear section having a portion of the bracket hingedly connected thereto, an end piece on said rear section, said end piece having a ball and socket connection with said support for adjustment and alignment purposes, a source of illumination at one end, said tubular body having interior reflector walls and a lens at the other end, and means for telescoping one section over the other.

2,006,126
SORTING APPARATUS FOR SUBSTANCES OF DIFFERENT DENSITIES
François Jacques Barthélémy Remy, Lille, France
Application February 1, 1933, Serial No. 654,949
In France February 16, 1932
2 Claims. (Cl. 209—497)

1. A sorting apparatus of the type described comprising a frame, a table having a perforated bottom, means for blowing air up through the perforated bottom, a rotating eccentric mounted in said frame, links pivoted to said frame, levers of unequal length connected to the ends of said links and connected together to the eccentric at one side of the latter, means connecting the table to the levers of unequal length, the distances between the points of attachment of the table to each lever and the points of attachment of each lever to the eccentric being proportional to the length of the respective levers.

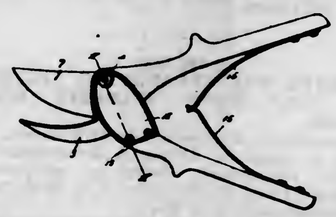


2,006,127
NAVIGATION INSTRUMENT
Victor B. Rush, New York, N. Y.
Application January 16, 1935, Serial No. 2,103
10 Claims. (Cl. 33—75)

5. In a mathematical instrument, a pair of scales arranged at an angle with one another, means to represent a line passing through the end point of one of said scales and intersecting the other scale, and means to represent a second line parallel to the first line and intersecting both said scales.

2,006,128
ROTARY DRILL
Carl E. Casperson, Tulsa, Okla.
Application August 22, 1934, Serial No. 740,991
2 Claims. (Cl. 255—19)

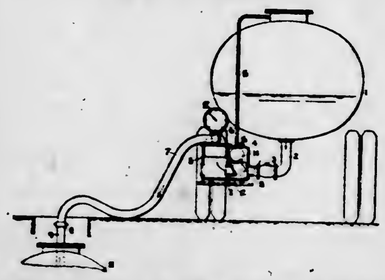
1. In a drilling mechanism, a gear case, a sleeve rotatably mounted therein, gearing within the case and operatively connected with the



2,006,122
BLOCK MOLD
Charles F. Fleming and John L. Hevins, Houston, Tex.
Application June 20, 1934, Serial No. 731,519
1 Claim. (Cl. 25—121)

A block mold of the class described comprising a pair of detachably connected sections, means for releasably securing the sections in closed position, a base, means for releasably securing the sections on the base, a hollow split core adapted to be mounted between the sections and having hook like ends engageable with one another for closing the core, and lugs projecting from the side plates and engageable in the core for supporting said core in position when the sections are closed and the core is closed.

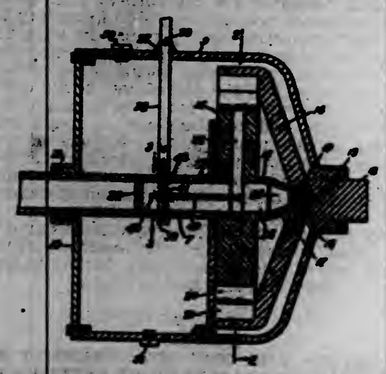
2,006,123
PRUNING SHEARS
Odel Fowler, Palisade, Colo.
Application May 11, 1933, Serial No. 670,674
1 Claim. (Cl. 30—11)



Pruning shears of the class described comprising a pair of members, each having a head part and a handle part, the head part of one member being of considerable width and the head part of the second member extending upwardly and forwardly, each head part being recessed on its inner face and having a hole in its upper part, a blade having a head part fitting in the space formed by the recesses and said head part of the blade having a hole adjacent its upper edge and adjacent the junction of said head part with the blade, the three holes registering, a bolt passing through the three holes, a non-circular projection on the inner face of the head part of the second member and the head part of the blade having a non-circular opening for receiving the projection, said projection and hole being below and in rear of the holes in said head parts, a plate of substantially the same shape as the head part of the second member, screws fastening the lower end of the plate to the outer face of the lower end of the head part of the second member, said plate extending over the outer face of the head part of the first member and having a threaded hole in its upper end for receiving the threaded part of the bolt, a nut threaded on the bolt and contacting the plate, and a hook extending from the head part of the first member.

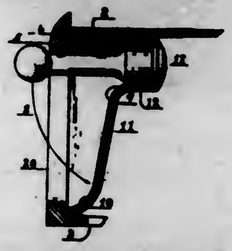
2,006,124
AUTOMATIC FUEL SUPPLY FOR BURNERS
Thomas J. Garrott, Troup, Tex.
Application September 6, 1934, Serial No. 743,001
1 Claim. (Cl. 236—8)

A fuel regulator for oil burners comprising, a pair of spaced cylinders, a piston in each cylinder, rods connecting said pistons, an adjusting nut on one of said rods, a coil spring encircling said rods, one end of said spring being adjustable with respect to the end of one of said cylinders the other end of said spring being in abutting relation with said adjusting nut, a steam inlet opening in the upper portion of one of said cylinders for communicating steam into said cylinder above the piston therein, a valve casing secured to the other cylinder having a tapered bore therein, communicating with a pair of spaced passages, and a tapered valve secured to the piston adjacent the valve casing movable in and out of said tapered bore for controlling a flow of fluid through said passages.



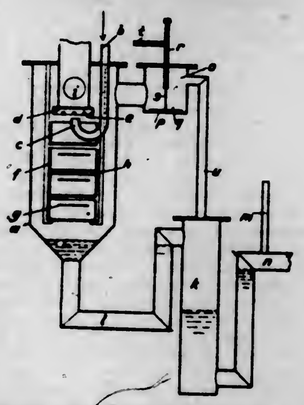
2,006,125
APPARATUS FOR THE MEASUREMENT BY VOLUME OF DELIVERED QUANTITIES OF LIQUIDS
George James Gibbs, Preston, England
Application December 19, 1934, Serial No. 758,224
In Great Britain October 5, 1933
4 Claims. (Cl. 221—67)

1. Apparatus for the measurement by volume of quantities of liquid delivered from a high level reservoir to a low level receptacle, comprising means for providing a float chamber and a liquid retaining chamber communicating therewith, a conduit connecting a low point of said reservoir with said float chamber, a meter communicating



with, said [illegible] chamber, valve means for [illegible] liquid inlet chamber for the [illegible] liquid [illegible] passage of air to [illegible] relative to the liquid level in said [illegible] for opening said valve [illegible] including a pilot valve [illegible] whereby to assure of the [illegible] upon the rising of said [illegible] from the upper part of said [illegible] point above the maximum [illegible] whereby air can escape [illegible] to a point above the [illegible] reservoir so that liquid from the reservoir may fill completely said float chamber, and a discharge conduit connected to said meter for delivering the liquid to the receptacle.

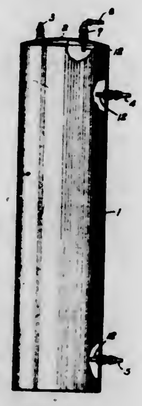
2,006,126
SPEED CONTROL MECHANISM
Gail Gallister, Little Sioux, Iowa
Application March 15, 1934, Serial No. 715,768
1 Claim. (Cl. 192—58)



A speed control mechanism comprising a housing, a drive shaft extending into the housing, a driven shaft extending into the housing, a rotor secured to the inner end of the driven shaft, an internally toothed ring on the inner end of the drive shaft within which the said rotor is eccentric, said rotor being provided with backwardly curved fins at its periphery, the inner end of said drive shaft being hollow and provided with an opening, ducts radiating from the axis of the rotor and being in communication with the interior of the hollow portion of the drive shaft and opening through the periphery of the rotor, and a valve operative axially of the rotor for controlling the passage of liquid into the said ducts, said valve being provided with a stem extending longitudinally in the hollow shaft, said hollow shaft being provided with a pair of diametrically opposite longitudinally extending slots, a cross pin at the end of the stem opposite from the end at which the valve is located, said pin extending at its ends through the slots in the hollow shaft, a rocker having one end portion embracing [illegible] the housing, a pair of rings [illegible] the hollow shaft and being adjustable on the inner end of the rocker to assume a [illegible] relation with respect to each other, the ends of the said cross pin extending into the space between the said rings.

2,006,127
GOLF PRACTICE DEVICE
Archie D. Grimes, Fort Worth, Tex.
Application April 26, 1933, Serial No. 667,965
2 Claims. (Cl. 273—26)

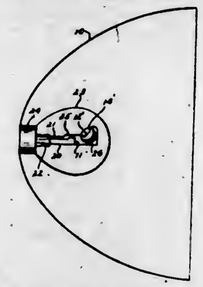
1. A golf practice device comprising a casing adapted for anchored disposition on the ground and provided with a cup-shaped recess and a vertical bore in its bottom wall, and a replaceable captive golf ball mounted therein, said last-mentioned member comprising a flexible unitary stud of resilient material, the upper portion of which is disposed above the top surface of said casing and is of conventional golf ball size and shape, the stem of which is of reduced diameter, and the lower portion of which is complementary to the bore in said casing and terminates in an enlarged head which prevents upward extraction of the stud from said bore, said stem portion and ball-shaped top surface being insertable into and capable of withdrawal from, the casing recess through said bore.



2,006,128
APPARATUS FOR SEPARATING SULPHUROUS ACID FROM SULPHITE WASTE LIQUOR
Karl Heinemann, deceased, late of Dresden, Germany, by Auguste Elisabeth Heinemann, executrix, Duesseldorf, Germany, assignor to American Lurgi Corporation, New York, N. Y., a corporation of New York
Application April 26, 1934, Serial No. 722,469
In Germany July 11, 1930
2 Claims. (Cl. 183—2.5)

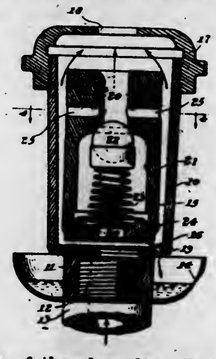
1. A degasifier for separating sulphur dioxide containing gases from waste sulphite liquor which

comprises a cylindrical vessel, a plurality of superimposed rings and plates mounted in said vessel, an inlet nozzle mounted over said rings and plates, an outlet for the withdrawal of sulphur dioxide containing gases, a liquor outlet at the bottom of said vessel, a U-shaped pipe associated with liquor outlet, a trap connected to said pipe, a connection between the top of said vessel and said trap for equalizing the pressure, and a disc valve in said connection for admitting air from the atmosphere to said vessel when the latter is under vacuum.



2,006,139
BOILER COUPLING DEVICE
James F. Arthur, Dickson City, Pa.
Application June 26, 1933, Serial No. 677,736
1 Claim. (Cl. 285—30)

In a domestic hot water boiler having a plurality of openings formed in the walls thereof for the introduction and withdrawal of water, means to prevent accretion of rust on the interior walls of the boiler from building up over said openings and interfering with the free circulation of liquid therethrough, comprising a nipple, one end of which is threaded into an opening in the wall of the boiler, the other end being connected with the water circulating system, said nipple being provided with an extension member in the form of a thin walled tube secured to a portion of the interior surface of the nipple, said extension tube projecting internally of the boiler a distance slightly greater than the depth of the rust accretion normally formed on the interior surfaces of the boiler.

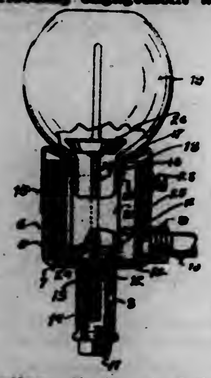


2,006,140
ILLUMINATION
Wilhelm Honing, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application January 13, 1933, Serial No. 651,593
In Great Britain January 15, 1932
2 Claims. (Cl. 240—41.25)

1. An electric lamp comprising a bulb having a pair of light sources therein, one located ahead of the other, and a concave shield disposed below the foremost light source with the normal to the plane in which the edge of said shield is located making an acute angle with the horizontal plane passing through the longitudinal axis of said

lamp, and also making an acute angle with the perpendicular plane passing through said axis.

2,006,141
STEAM POP-OFF VALVE
Frank L. Hussey, San Francisco, Calif., assignor to Blue Ribbon Products Company, Inc., San Francisco, Calif., a corporation of California
Application November 21, 1932, Serial No. 643,668
2 Claims. (Cl. 277—45)



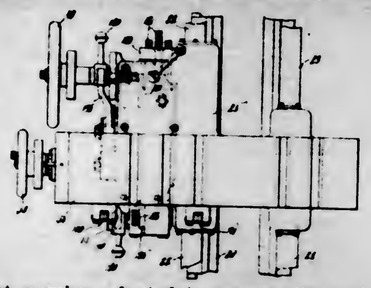
1. A valve of the class described comprising a casing having a central escape opening in the top and an entry opening in the bottom; a valve in said casing automatically lifted by fluid under pressure entering through said entry opening until said valve contacts with the top of the casing, there being a central vertical passageway through said valve registering with the opening in the top of the casing when the valve is so lifted; and a yielding ball valve closing the lower end of the upper portion of said passageway, there being a transverse opening through said valve above said ball and a drain opening leading from the bottom of said casing.

2,006,142
LIQUID DISPENSING AND LEVEL MAINTAINING DEVICE
Oscar H. Jung and Paul E. Heffelfinger, Milwaukee, Wis., assignors to Trico Fuse Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application October 7, 1932. Serial No. 636,662
3 Claims. (Cl. 137—68)

1. A liquid dispensing and level mantaining device comprising a cup provided with an outlet, an adjustable support positioned in said cup, a

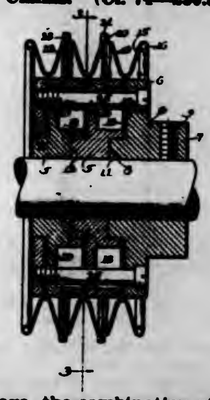
liquid container slidably guided on said cup and having interlocking engagement with said sup-

port for effecting adjustment of the same upon rotation of the container.



2,006,143
BOTTLE AND METHOD OF MANUFACTURING SAME
Lydia R. Koch, New York, N. Y.
Application February 4, 1932, Serial No. 655,173
3 Claims. (Cl. 220—4.5)

2. A container as characterized comprising a side wall of a single piece of material of frusto-conical shape with both the neck portion and the base portion constructed to less than the original diameter, and having a smooth middle band between the said neck and base portions.

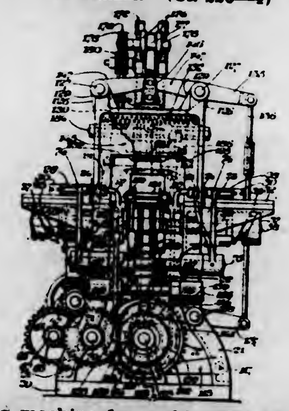


2,006,144
FEED KNOCK-OFF MECHANISM FOR LATHES
John E. Lovell, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application November 2, 1932, Serial No. 640,927
6 Claims. (Cl. 82—21)

1. In a lathe, a bed, a carriage slidable thereon, a cross-slide slidable on said carriage transversely of said bed, means for feeding said slide, a power-driven shaft, means for connecting said feeding means to said shaft, a pair of stop elements mounted on said slide, and means on said carriage operable by either of said stop elements to disconnect said feeding means from said shaft, said last-mentioned means including a device responsive to disconnect said feeding means, a shouldered plunger longitudinally movable to release said device, a non-yielding member engageable by the shoulder on said plunger simultaneously with the release of said device, an abut-

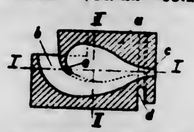
ment member adapted to engage either of said stop elements, and non-yielding connections between said abutment member and said plunger.

2,006,145
PULLEY
Eugene E. Massey, Chicago, Ill.
Application October 31, 1932, Serial No. 640,474
4 Claims. (Cl. 74—230.8)



1. In a sheave, the combination of a main hub section comprising a disc with hub portions extending on either side thereof, a plurality of intermediate duplicate hub sections, each of said intermediate sections having a recess on one side and a projection on the other side, said recesses being adapted to receive the projection of the adjacent main hub section or the adjacent intermediate section, pairs of rings formed of sheet metal fitting between the adjacent hub sections and welded together, the outer portions of said rings being beveled to form pulley grooves and having the outer peripheries of the adjacent groove portions seamed together, a ring fitting over the hub of the last intermediate section and having threaded holes therein, and screws extending through the hub sections and rings for fastening the parts together.

2,006,146
POTATO FOOD PRODUCT
George P. Miller, Naperville, Ill.
No Drawing. Application December 1, 1933, Serial No. 700,505
6 Claims. (Cl. 99—8)



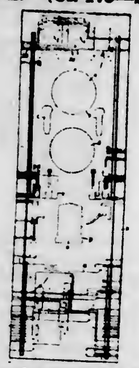
1. The process of preparing the substance of white potato for subsequent cooking, consisting of reducing the peeled potato to a finely divided texture without destroying its cell structure, and subjecting the finely divided particles to contact with steam until each particle acquires a sticky gelatinous coating of the partially converted starches.

2,006,147
MACHINE FOR PACKING FLAT PACKETS AND THE LIKE
Michael Paridon, Barberton, Ohio, assignor to The Diamond Match Company, New York, N. Y., a corporation of Maryland
Application January 30, 1934, Serial No. 708,963
24 Claims. (Cl. 226—4)

1. In a machine for packing flat packets and the like, the combination of two elongated assembly chambers arranged in spaced parallel relation, a trackway connecting said chambers and having a throat therebetween, a barrier for said throat, means for progressively supplying a predetermined number of articles to the respective chambers, and means for moving the two rows of articles toward each other along the trackway and arranging them in juxtaposition upon the barrier.

2,006,148
MUFFLE FOR USE IN CONNECTION WITH THE CASTING OF PRECIOUS METALS
Karl Plaschka, Vienna, Austria
Application January 27, 1934, Serial No. 708,556
In Austria January 10, 1933
1 Claim. (Cl. 22—65.1)

In a muffle for the charging of precious metal casting molds which is completely enclosed except for a charging aperture and a delivery aperture, a conchoidal baffle forming part of said muffle and projecting inwardly into the hollow space within the muffle and adapted positively to direct the charge towards the delivery aperture at an increased injection pressure.



2,006,149
SEAT CONTROL MECHANISM
Albert T. Potter, Detroit, Mich., assignor to Ainsworth Manufacturing Corporation, a corporation of Michigan
Application December 15, 1932, Serial No. 647,317
12 Claims. (Cl. 155—14)

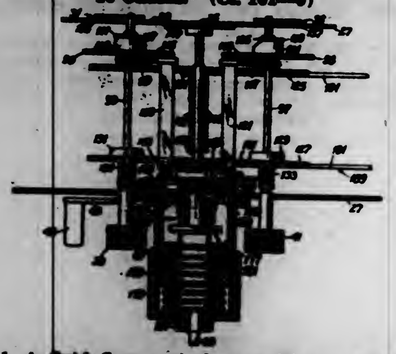
1. An article of manufacture comprising plate members adapted to be connected to seat and supporting elements respectively, roller elements between the members and having rolling contact therewith for movably supporting one member on the other, said rollers having peripheral surface portions curved transversely of the path of relative movement of the members, said plate members having substantially complementary

curved portions engaging the curved peripheral portions of the rollers respectively, one of said plate members having a guide disposed longitudinally of the path of relative movement of the members, and means comprising an element extending longitudinally in said guide and cooperating with both plate members for releasably locking them in adjustable positions.

2,006,150
PANEL BOARD AND METHOD OF WIRING THE SAME
George M. Reed, Yeadon, and Robert Paxton, Drexel Hill, Pa., assignors to General Electric Company, a corporation of New York
Application August 28, 1934, Serial No. 741,802
14 Claims. (Cl. 175—298)

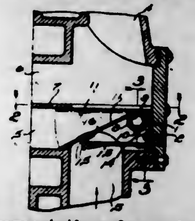
12. The method of simultaneously making a wiring assembly for a board upon which electrical devices are supported and a permanent record of the assembly, which comprises preparing a full size drawing of the board with means thereon indicating the respective positions of the terminals of the wires to be connected to the terminals of the devices on the front of the board, placing the drawing flatwise on a support and utilizing it as a template, shaping wires on the template to positions in which their free ends substantially register with the said indicating means, holding the wires substantially in their assembled positions, removing the assembled wires from the template and transferring them as a unit to the back of the board, and connecting their free ends to said electrical devices.

2,006,151
PILE WIRE FOR LOOMS
Carl R. Schreiner, Brooklyn, N. Y.
Application June 20, 1934, Serial No. 731,422
6 Claims. (Cl. 139—44)



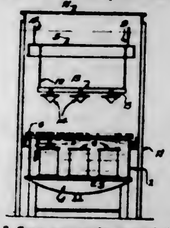
1. In a pile cutting device, in combination, a holder, a spoon at one end of the holder, a keyway in the spoon, said keyway comprising a lon-

gitudinal groove and a groove crosswise thereof, a slot between the side walls of said holder, a blade, a key on the blade, said key having a long, flexible neck and a cross member on said neck, said cross member being located at the



extreme end of said neck and comprising two arms extending crosswise thereof, said neck fitting into said longitudinal groove and the cross member fitting into said crosswise groove, the lower portion of the body of the blade fitting into said slot.

2,006,152
FLOW CONTROL
John A. Spencer, Newtonville, Mass., assignor to General Plate Company, Attleboro, Mass., a corporation of Massachusetts
Application July 31, 1933, Serial No. 682,953
10 Claims. (Cl. 161—9)



1. A fluid flow control comprising a valve, a valve-actuating stem extending from said valve and operable, upon reciprocation thereof, to open and close said valve, means engaging said stem for reciprocating the same, said means including a main shaft having an eccentric cam thereon, said main shaft having a plurality of angular positions determining through said eccentric cam the condition of said valve, a spring at all times urging said main shaft to return to a first of said angular positions determining a closed valve condition, manually actuatable means for rotating said main shaft against said spring progressively through a second of said angular positions determining an open valve condition, to a third of said angular positions again determining a closed valve condition, a stop-cam on said main shaft, latch bars positioned at said second and third positions with respect to said stop-cam, and time-controlled means operatively controlling the position of said latch bars, each of said latch bars being movable into position to intercept the rotation of said stop-cam, and thereby to hold said main shaft in its respective angular position against the action of said spring until the expiration of a predetermined time interval, and temperature-responsive means for shifting said main shaft longitudinally on its axis, whereby, under one set of external temperature conditions, said stop-cam is removed from intercepted position with respect to said latch bars regardless of their time-controlled position, and whereby said main shaft is automatically returned under the action of said spring to said first angular position, regardless of the condition of said time-controlled latch bars.

2,006,153
THERMOSTATIC VALVE
Herbert B. Trix, Grosse Pointe Village, Mich., assignor to American Injector Company, Detroit, Mich., a corporation of Michigan
Application September 30, 1933, Serial No. 691,719
6 Claims. (Cl. 236—34)

1. In a thermostatic valve, a bracket, a valve member pivotally mounted on the bracket and provided with a depending lug, the valve member being arranged to fall by gravity to the closed position, a bimetallic arm having an end normally engaging the lug of the valve member to hold the valve member in the closed position, the bimetallic arm being arranged to release the valve member upon reaching a pre-determined temperature and a helical thermostat arranged to turn the valve member on its pivot under temperature variation.

2,006,154
WASHING AND BLEACHING APPARATUS FOR ARTIFICIAL YARNS
Aldo Bassocchi, Milan, Italy
Application September 28, 1932, Serial No. 635,145
In Italy November 5, 1931
1 Claim. (Cl. 8—19)

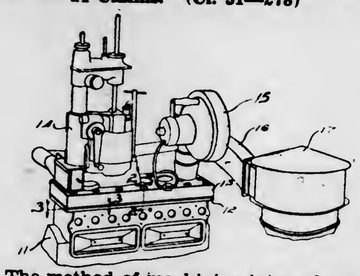
A vat equipped for carrying out in the same an entire and complete series of consecutive operations such as the washing, desulphurating, bleaching and reviving treatment of artificial yarns in the forms in which they are delivered from spinning operations, including the combination, with said vat proper and supporting means for supporting a plurality of bobbins within said vat, of a channel portion formed upon the upper edge of the vat, entirely surrounding the latter and capable of containing a quantity of fluid therein, a cover for said vat having a downwardly directed peripheral edge which in closed position of the cover extends into the channel portion upon said vat and is adapted to be submerged in fluid located in the channel portion so as to form a hydraulic seal, a frame suspended beneath and within said cover as part of the equipment thereof, a plurality of individual covers for said bobbins secured as a group to said frame and adapted to individually engage the tops of said bobbins and close the same in closed position of said first cover, means for raising the first cover at will and thereby simultaneously raising said frame and said bobbin

covers, and means including a pipe connected with the interior of the vat immediately beneath the first cover and above the interior thereof for leading off to the atmosphere outside the treatment room the vapors and gases in said interior.

2,006,155
ELECTRIC LAMP AND THE LIKE AND ITS MOUNTING AND ELECTRICAL CONNECTION
Harold D. Blake, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application April 21, 1933, Serial No. 667,223
8 Claims. (Cl. 176—32)

1. An electric device comprising a bulb; a disc having a plurality of apertures abutting against the bulb end and affixed thereto, with wing portions projecting outward beyond the bulb end periphery; and current leads issuing from the bulb end extending through different disc apertures and outward on the disc wings, with lateral contacts on said wings connected to said leads.

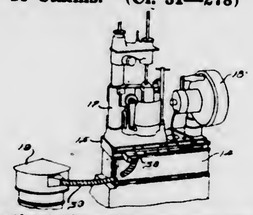
2,006,156
SELF PROPELLED TOY
Joseph L. Bonanno, Forest Hills, N. Y., assignor to The Lionel Corporation, New York, N. Y., a corporation of New York
Application September 14, 1933, Serial No. 689,355
14 Claims. (Cl. 46—37)



1. A steering mechanism for boats, comprising, a rudder carried on a rudder post, a forwardly projecting finger carried by the rudder post, a longitudinally extending link pivoted on a fixed support to swing about a vertical axis in front of the rudder post and having a slotted connection with the finger whereby the swinging of the link shifts the rudder, and a spring connecting the finger and the link and acting to pull the rudder into a predetermined mid-position for steering the boat straight.

2,006,157
SYNTHETIC ALCOHOL
Benjamin T. Brooks, Old Greenwich, Conn., and Reuben Schuler, Elizabeth, N. J., assignors to Standard Alcohol Company
No Drawing. Application December 1, 1933, Serial No. 700,611
8 Claims. (Cl. 260—156)

1. In the manufacture of an alcohol, the process which comprises contacting under absorption conditions an olefin with sulfuric acid containing a substantial quantity of an ether.

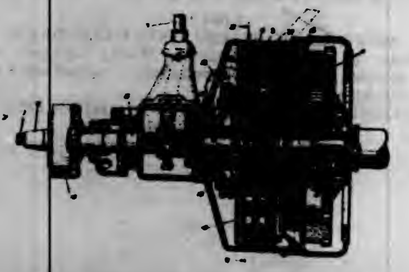


8. In the manufacture of an alcohol from an olefin, the process which comprises forming the alcohol under conditions to produce also an ether, adding to sulfuric acid a substantial quantity of such ether, and utilizing the sulfuric acid to absorb further quantities of the olefin.

2,006,158
METHOD OF MACHINING CYLINDERS
Kirke W. Connor, Detroit, Mich., assignor to Micromatic Hone Corporation, a corporation of Michigan
Application September 23, 1933, Serial No. 690,673
14 Claims. (Cl. 51—278)

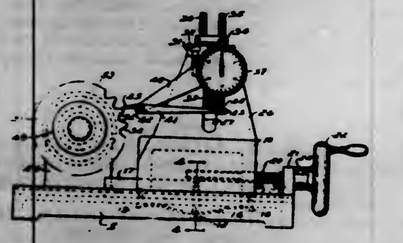
1. The method of machining internal combustion engine cylinders or the like including the steps of mounting a spacer element on the cylinder block in the position usually occupied by the cylinder head, mounting a machine supporting element above said spacer element, rigidly spacing said machine supporting element from said cylinder block so that the ends of said machine supporting element are equidistant from the crank shaft axis of said cylinder block, and then threading elements on the stud bolts of said cylinder block which urge said machine supporting element toward said cylinder block.

2,006,159
METHOD OF MACHINING CYLINDERS
Kirke W. Connor, Detroit, Mich., assignor to Micromatic Hone Corporation, a corporation of Michigan
Application September 28, 1934, Serial No. 745,883
16 Claims. (Cl. 51—278)



1. The method of machining cylinders of an engine block which includes the steps, of stressing the block to simulate the stresses set up therein when the cylinder head is clamped thereon, thereafter leveling a support for the machining tool parallel to the axis of the crank shaft bearings, securing the tool on said support, and machining the cylinders thereafter.

2,006,160
VARIABLE SPEED TRANSMISSION
Adiel Y. Dodge, South Bend, Ind.
Application February 1, 1933, Serial No. 654,658
22 Claims. (Cl. 74—260)

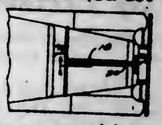


1. A variable speed transmission comprising mass inertia means arranged to produce posi-

tive and negative driving impulses, and including means for yieldingly absorbing the negative impulses and a planetary system embodying a sun member, a ring member concentric with re-

spect to the sun member, planet members engaging both sun member and ring member, and counter weighted planets engaging said first mentioned planet members only.

2,006,161
CHECKING FIXTURE
Joseph O. Bruder, Detroit, Mich., assignor to [illegible] Tool Company, a corporation of Michigan
Application November 15, 1930, Serial No. 497,500
1 Claim. (Cl. 33—174)



A device for testing the teeth or thread of an element the sides of which are tangent to a circle, which includes, in combination, a base, a finger, an indicator actuated thereby, an arbor upon which the element to be tested may be supported, a cylinder of the same diameter as the base circle of the element to be tested disposable on said shaft for setting the indicator to have the finger disposed to move in a plane tangent to the base circle of said element, means for securing an element to be tested on the arbor to have the side of its tooth in engagement with said finger when the indicator shows said setting, and means for advancing said finger over said tooth or thread to explore the surface thereof.

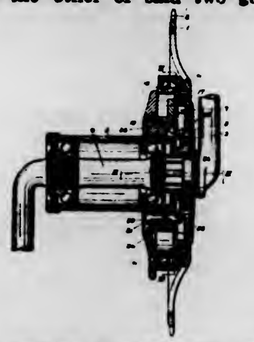
2,006,162
GRINDING COMPOSITION
Herman C. Fuchs, Brooklyn, N. Y., assignor to Formadine Company, Inc., Brooklyn, N. Y., a corporation of New York
No Drawing. Application July 26, 1934, Serial No. 736,005
12 Claims. (Cl. 51—309)

1. A paste-like grinding composition containing tripoli, water, an abrasive and a glycollic compound.

2,006,163
HOOD CONSTRUCTION
William J. Hall, Detroit, Mich., assignor, by mesne assignments, of thirty per cent to Ollie L. Herron, thirty per cent to Joseph B. Hammers, thirty-three per cent to William J. Hall, and seven per cent to R. C. Schemmel
Application November 23, 1932, Serial No. 643,963
11 Claims. (Cl. 189—69)

1. A hood hinge comprising a finishing strip, terminating at one edge in an attaching flange directed to one side thereof, and its other edge in a rolled edge at the same side of the strip as the flange, and a second member having an attaching flange similar to the first flange, and a rolled edge portion hingedly cooperating with the rolled edge on the finishing strip, the axis of hinging movement of the cooperating rolled edges being substantially offset from the line median between the edges of the finishing strip.

2,006,164
VEGETABLE GLUE AND PROCESS FOR MAKING THE SAME
Ellery H. Harvey, Highland Park, Ill., assignor to Perkins Glue Company, a corporation of Delaware
No Drawing. Application May 6, 1935, Serial No. 20,160
12 Claims. (Cl. 134—22.4)



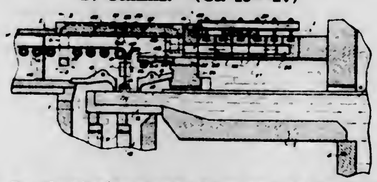
1. The improved method of making cassava starch glue which has a water content of more than 1 to about 3 parts of water to 1 part of starch and which is sufficiently fluent so that it may be readily flowed through pipes at ordinary temperatures, has a viscosity range of about 3000 to a viscosity of a wood glue applicable by machinery, and still has sufficient adhesiveness for joining wood, which comprises treating bursted cassava starch at bursting or shortly thereafter with a peroxide in the presence of about said proportion of water to reduce the viscosity of the resultant adhesive and forming a solution of the starch so treated.

12. A vegetable glue comprising a solution of the reaction products of cassava starch bursted in the presence of a peroxide, alkali and water, the specific viscosity of the glue solution at 75° F. being less than 10,000, the amount of water in the glue being about 3 parts or less to 1 part of starch by weight, and the glue having substantially the adhesiveness of animal glue for joining wood.

2,006,165
GEARING DEVICE FOR BICYCLES AND THE LIKE
Oskar Algot Hjalm, Stockholm, Sweden
Application December 22, 1933, Serial No. 703,526
In Sweden December 8, 1932
9 Claims. (Cl. 200—154)

1. A change speed chain and sprocket drive for a bicycle or the like, comprising the combination, with a pedal shaft rotatably mounted in bearings upon said bicycle, of an axially shiftable gear upon said pedal shaft positively rotated by the shaft, a chain sprocket surrounding said pedal shaft and being rotatable and eccentrically displaceable in its own plane, at least two different gear means rigid with said chain sprocket

individually adapted to be brought into mesh with said axially shiftable gear, a semi-rotary cam member surrounding said pedal shaft and effective in one position of partial rotation to dispose one of said two gear means in initial position to mesh with said axially shiftable gear and in another partly rotated position effective to dispose the other of said two gear means

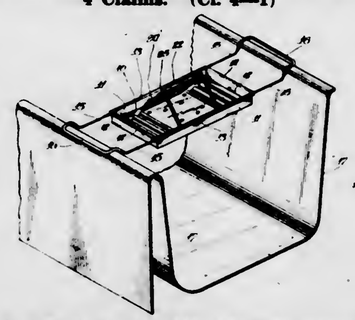


initially in position to mesh with said axially shiftable gear, and means for simultaneously shifting said axially shiftable gear into proper position with respect to either one of said two gear means while rotating said cam member partially to the correspondingly proper position to cause the meshing of the gear means with the shiftable gear which is shifted to mesh.

2,006,166
LACQUER SOLVENT
Harry E. Hofmann, New Providence Township, Union County, N. J., and James G. Park, Brooklyn, N. Y., assignors, by mesne assignments, to Stance, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 9, 1932, Serial No. 621,752
9 Claims. (Cl. 134—79)

1. Composition of matter comprising a liquid solvent for pyroxylin containing 25 to 50% ketone of the formula CH_3COR, 20 to 40% of an acetate of the formula CH_3COOR and 20 to 40% of an acetate of the formula CH_3COOR' in which R is an alkyl group containing 3 to 5 carbon atoms and R' is an alkyl group containing one carbon atom more than R.

2,006,167
SHEET GLASS FORMING APPARATUS
Frederick R. Hohmann, Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application August 25, 1934, Serial No. 741,425
17 Claims. (Cl. 49—17)

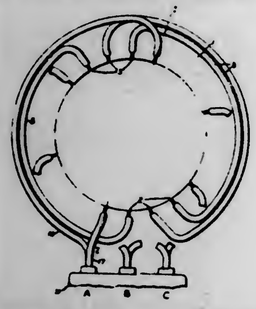


1. In sheet glass apparatus, a receptacle containing a mass of molten glass, a sheet forming machine including means for drawing a sheet upwardly from the molten glass in said receptacle, a tank for supplying molten glass to the receptacle, one wall of said tank having a passageway formed therein, means for feeding air into the passageway at one end thereof, and means for receiving the air from the opposite end of said passageway and discharging it into the interior of the sheet forming machine in proximity to the sheet being drawn.

2,006,168
ANNEALING METAL ARTICLES
James Edwin Hutchman, Indianapolis, Ind., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application September 11, 1934, Serial No. 743,548
4 Claims. (Cl. 148—4)

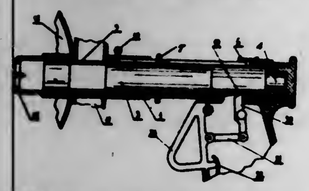
1. The method of annealing a metal article having a finished surface without staining or otherwise defacing said surface so as to necessitate a refinishing operation which comprises covering said surface with a removable coating comprising a rubber composition which will not become tacky and unduly adhere to the finished surface after the annealing operation or harden and crack and prevent the coating from being readily stripped off when desired, and subjecting the thus protected article to annealing conditions.

2,006,169
BOOKREST FOR BATHTUBS AND THE LIKE
Winifred E. Harris-Jones, San Francisco, Calif.
Application May 9, 1934, Serial No. 724,681
4 Claims. (Cl. 4—1)



1. A device of the class described comprising a sheet metal supporting tray having a perforated bottom and upwardly extending sides and ends the top edges of its sides being rolled into tubular guides; and a support at each end of said tray formed from a wire rod bent into substantially U-shape with the ends thereof arranged to slide in said guides.

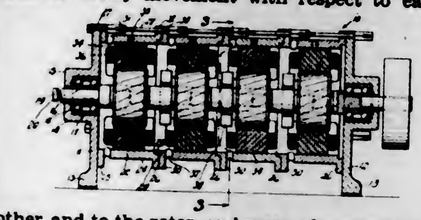
2,006,170
WINDING FOR THE STATIONARY MEMBERS OF ALTERNATING CURRENT DYNAMO-ELECTRIC MACHINES
Gustaf Adolf Juhlin, Timperley, England, assignor to General Electric Company, a corporation of New York
Application April 30, 1934, Serial No. 723,245
In Great Britain May 11, 1933
2 Claims. (Cl. 171—206)



1. A stationary member for a dynamo-electric machine, a winding for said stationary member

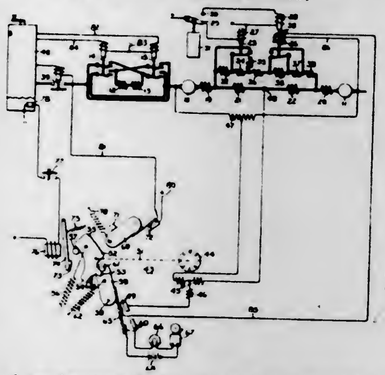
comprising a plurality of conductors arranged in slots in said stationary member, each of said slot conductors comprising a plurality of concentric conducting elements insulated from each other, end connections each comprising a plu-

rality of concentric conducting elements respectively connected to the concentric elements of said slot conductors for connecting the corresponding concentric elements of said slot conductors into separate circuits, and means for connecting said circuits in series.



2,006,171
LIGHTING APPARATUS
Ernest Kalkeam, John Edmond de Christmas Direkinck de Holmfeld, and Valdemar de Christmas Direkinck de Holmfeld, Paris, France
Application February 23, 1933, Serial No. 658,234
In France February 25, 1932
6 Claims. (Cl. 67—33)

1. A flash-light apparatus comprising a cylinder having a lateral port, a grate structure closing one end of said cylinder, an annular magazine for flash-light cartridges adapted to revolve about said cylinder over said port, means for feeding cartridges from the magazine through the port into the cylinder, a spring-controlled plunger in said cylinder adapted to project admitted cartridges against said grate, means for retracting the plunger from the grate in opposition to the spring pressure, means for retaining the plunger in retracted position, means for releasing the plunger, and means operated by the impact of the plunger, for igniting the cartridge behind the grate.

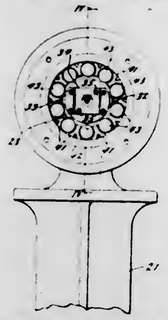


2,006,172
ELECTRIC MACHINE
Ali F. Kiappauf, Chicago, Ill.
Application April 4, 1933, Serial No. 663,132
4 Claims. (Cl. 172—120)

1. An induction motor including a sectional casing, a sectional shaft, a motor unit including a field coil carried by each section of the casing and a rotor for each field coil, each rotor serving to couple the meeting ends of the shaft sections against rotary movement with respect to each

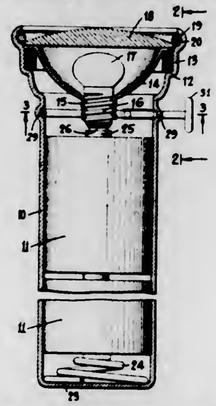
other and to the rotor, and means for connecting the sections of the casing together.

2,006,173
CONTROL SYSTEM
Jacob W. McNairy and Harold S. Ogden, Erie, Pa., assignors to General Electric Company, a corporation of New York
Application November 9, 1934, Serial No. 752,318
13 Claims. (Cl. 172—179)



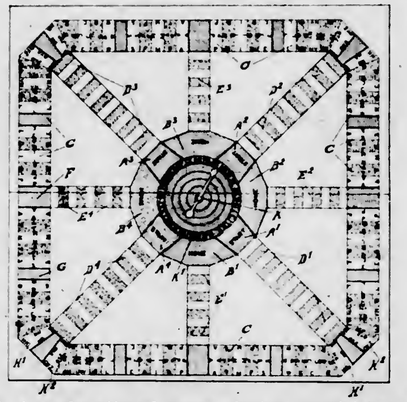
1. A protective system for electric motors connected for energization in series circuit relation comprising means differentially responsive to the speeds of said motors for deenergizing said motors upon the occurrence of a predetermined differential speed, and means responsive to the speed of said motors for controlling said differential speed responsive means to deenergize said motors at another differential speed when said motors are operating at a predetermined high speed.

2,006,174
MACHINE FOR PRODUCING FLEXIBLE SHAFTING
Louis H. Morin, New York, N. Y., assignor to American Flexible Shaft Manufacturing Corporation, New York, N. Y., a corporation of New Jersey
Application December 7, 1928, Serial No. 324,465
3 Claims. (Cl. 117—34)



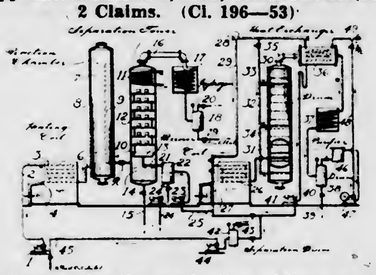
1. In a machine for making flexible shafting of the type having a core surrounded throughout by a plurality of layers of helically wound wire, in combination: means including a winding head for forming a helically wound layer of wire on the core; means positioned in advance of said first named means for forming another helically wound layer of wire on the first layer; means arranged in advance of the last named means and arranged to receive therefrom a core with the two layers of wire thereon for administering

thereto progressively along its entire length and around its entire periphery a multiplicity of hammer blows of a magnitude insufficient to cause material distortion thereof; means arranged in



advance of the last named means for receiving the core with the layers thereon and flexing the same and means arranged in advance of the last named means for causing the gradual advance of the core and its layers.

2,006,175
CIRCUIT CLOSER
Alden E. Osborn, New York, N. Y.
Application March 13, 1930, Serial No. 435,397
6 Claims. (Cl. 240—10.68)



1. In an electric flashlight of the class described having a battery, a casing formed with an aperture, means carried with the casing in electrical connection with one terminal of the battery, a lamp carried with the casing and insulated therefrom and having its central terminal in electrical connection with the other terminal of the battery, means to close the circuit between the first named means and the other terminal of the lamp comprising a substantially volute deformable conducting member lying in and deformable in a transverse plane including the lamp base and in electrical connection with the first named means and having a contact end movable transversely of the casing into electrical contact with the peripheral terminal of the lamp base upon the deformation of the conducting member, an operating member movable in the aperture and carried with the conducting member and extending exteriorly of the casing, said operating member having portions adapted to selectively engage the edge of the aperture to selectively permit and maintain, at will, depression of said operating member to deform the said conducting member and move the contact end into circuit making position.

2,006,176
GAME
Harry Lenardson Quine, Brooklyn, N. Y.
Application March 23, 1932, Serial No. 600,600
3 Claims. (Cl. 273—134)

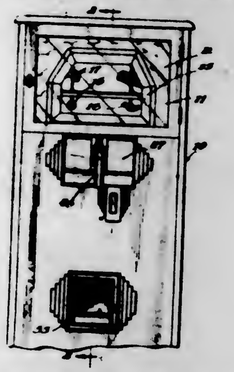
3. An educational game device comprising a game board provided with a central terminal space consisting of an individual starting field and a separate individual home field for each player, a common main track surrounding the central terminal space, a plurality of individual tracks, one for each starting field and home field, respectively, each of said individual tracks leading from its respective field to the common main track, all of the tracks being sub-divided to form small spaces, the spaces of the main track constituting a plurality of sets of playing spaces, each set having a series of spaces carrying indicia indicating different letters of the alphabet in disarranged order.

2,006,177
PROCESS FOR OBTAINING VALUABLE REFINED DISTILLATES FROM UNREFINED HYDROCARBON OILS AND PRODUCTS OBTAINED THEREBY
Edward B. Peck, Elizabeth, N. J., assignor to Standard-I. G. Company
Application March 7, 1930, Serial No. 433,937
2 Claims. (Cl. 196—53)

1. Process for the production of improved low boiling hydrocarbons suitable for high grade motor fuel from relatively heavier petroleum oils, comprising cracking the oil vigorously at a tem-

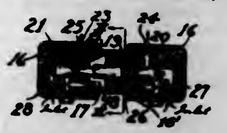
perature in excess of 800° F. to produce gas oil having a low aniline miscibility point, segregating from the cracked products a gas oil distillate fraction having an aniline miscibility point below 100° F., passing said fraction in vapor phase at a pressure in excess of 20 atmospheres and a temperature above 800° F. through a reaction zone containing a sulfactive hydrogenation catalyst with a limited amount of hydrogen sufficient to avoid coke formation and insufficient to produce saturated products, withdrawing and cooling the resulting destructively hydrogenated products and separating therefrom a fraction suitable for motor fuel.

2,006,178
THERMOSTAT
Emil E. Piron, Detroit, Mich., assignor to The Detroit Edison Company, Detroit, Mich., a corporation of New York
Application June 11, 1932, Serial No. 616,661
15 Claims. (Cl. 200—137)



1. In a device of the class described, a frame, a lever pivotally connected near one end to said frame, a temperature responsive element engaging said lever adjacent and on one side of the pivot, means for yieldably holding said element in engagement with said lever, a toggle make and break device including a pair of relatively separable contacts carried by the other end of the lever and movable therewith, and means for arresting movement of one end of said make and break device during pivotal movement of said lever in one direction

2,006,179
VOLTAGE SURGE INDICATOR
Arthur L. Price and Francis B. Monger, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application May 5, 1930, Serial No. 449,998
21 Claims. (Cl. 177—311)

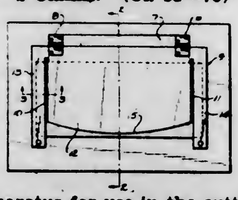


1. A voltage surge indicator comprising a movable arm having a contact, a stationary contact positioned in a plane which is displaced from the plane in which said arm moves, a link consisting of two spaced apart electrodes, a frangible tube surrounding said electrodes and forming a closed chamber in said tube between the adjacent ends of said electrodes and an explosive mixture in said chamber, the said link being positioned between said contacts so as to cause said arm to assume a given stationary position with the plane of the link being at an angle to the plane in which said arm moves, and means for moving said arm to a different stationary position in response to the breaking of said link.

2,006,180
TARGET GAME
Duane William Price and Marvin Kellermann, Chicago, Ill., assignors, by mesne assignments, to Frank J. Kolar, South Bend, Ind.
Application April 17, 1933, Serial No. 666,475
11 Claims. (Cl. 272—101)

11. A target game comprising a continuous target conveyor, a plurality of targets carried by said conveyor, a latch associated with each target adapted to support a prize, and means on each target adapted to be operated by a correctly directed projectile to operate the latch and release the prize associated with the target.

2,006,181
LUBRICATING DEVICE
Maurice Reswick, Pittsburgh, Pa., assignor to Penola, Inc., a corporation of Delaware
Application September 10, 1930, Serial No. 480,883
8 Claims. (Cl. 184—7)

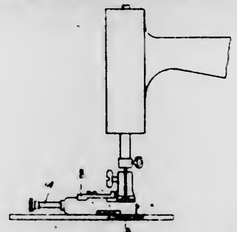


1. In apparatus of the class described, a body portion having inlets and outlets, concentric bores in said portion, an annular piston in at least one of said bores, valve heads in said other bores and a stem joining said heads and passing through said annular piston, said body having by-passages associated with said heads, said heads being each arranged to alternatively cover and uncover the outlet passages and the by-passages and said outlet passages being uncovered when their respective by-passages are covered.

2,006,182
LAMINATED SAFETY GLASS
Joseph D. Ryan, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application August 20, 1934, Serial No. 740,601
7 Claims. (Cl. 49—81)

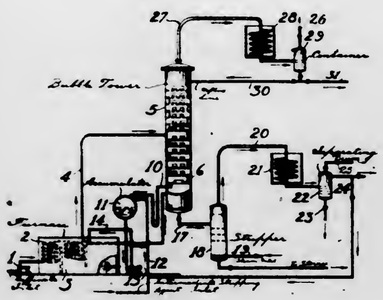
1. Laminated safety glass comprising two sheets of glass and an interposed layer of cellulose derivative plasticized with methyl phthalyl ethyl glycollate adherent to the inner surface thereof.

2,006,183
TEMPLATE
Conrad B. Schafer, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 13, 1930, Serial No. 495,364
2 Claims. (Cl. 33—76)



1. In apparatus for use in the cutting of glass sheets or plates, a template member adapted to rest upon the sheet to be cut, said template member having a pattern section of the shape and size of sheet to be cut and being further provided with slots, the inner edges of which define the outer edges of said pattern section, said slots being provided for the reception of a scoring tool which is adapted to fit snugly therein.

2,006,184
TREATMENT OF RUBBER
Walther Schrauth, Berlin-Dahlem, Germany, assignor, by mesne assignments, to "Unichem" Chemikalien Handels A.-G., Zurich, Switzerland, a corporation of Switzerland
No Drawing. Application October 9, 1930, Serial No. 487,505. In Germany October 22, 1929
9 Claims. (Cl. 18—59)

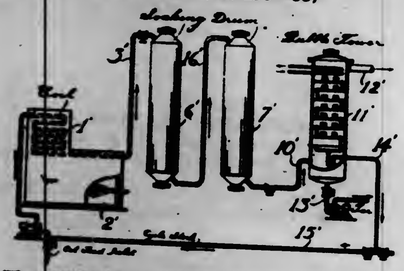


1. A process of treating caoutchouc, caoutchouc masses, regenerated rubber or finished rubber characterized in that caoutchouc, caoutchouc masses, regenerated rubber or finished rubber are subjected to the action of 5 to 10% of a mixture of octodecyl and octodecenyl alcohol.

2,006,185
NEEDLE THREADING DEVICE
Siegfried Sidler, Zurich, Switzerland
Application November 9, 1932, Serial No. 641,815
In Germany January 30, 1932
3 Claims. (Cl. 112—225)

1. In a needle threading device of the kind described having a threading pin for carrying a thread through the eye of a needle, the combination of a projection and an adjustable abutment adapted together to center the device beneath the needle of a sewing machine by entering the aperture in the machine base beneath the needle and abutting the presser foot of the machine respectively, and an abutment having an aperture therein for receiving the point of the machine needle and stopping it with its eye aligned with the threading pin.

2,006,186
RECTIFYING PROCESS
Daniel E. Stines, Plainfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 29, 1931, Serial No. 583,680
12 Claims. (Cl. 196—94)

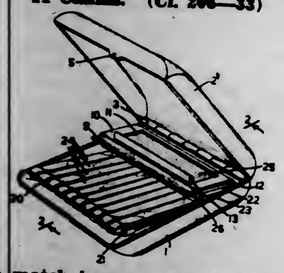


11. The method of separating a relatively high and a relatively low boiling material from a solution thereof, which comprises heating the solution above the boiling point of the lower boiling material, passing the heated solution through a fractionating zone, withdrawing the unvaporized fractions from the fractionating zone and mixing them with a substance having a boiling point between the boiling points of the materials, heating the mixture above the boiling point of the substance, passing vapors from the heated mixture through the fractionating zone whereby vapors of the substance rising through the fractionating zone strip the lower boiling material from the higher boiling material, removing vapors of the lower boiling material overhead from the fractionating zone, and withdrawing the unvaporized bottoms of higher boiling material and substance from the fractionating zone.

2,006,187
MANUFACTURE OF PIGMENTS
George F. A. Stutz, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application January 23, 1931, Serial No. 510,764
6 Claims. (Cl. 134—78)

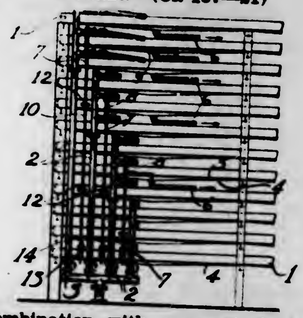
1. The improvement in the calcining treatment of a pigment associated with a liquid in an atmosphere containing vapor corresponding to said liquid, which comprises increasing the pressure of the atmosphere above the vapor pressure of the liquid at the prevailing temperature by introducing an inert gas into said atmosphere.

2,006,188
METHOD OF CRACKING
Harold Sydner, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 6, 1929, Serial No. 412,193
1 Claim. (Cl. 196—58)



The method of cracking hydrocarbon oil which comprises heating the oil to cracking temperature in a zone of restricted cross-section, then passing all the oil directly from said zone downward through a plurality of substantially vertically arranged cracking zones of large cross-section, in which a substantial amount of cracking takes place, without additional application of heat, the cracking zones of large cross-section being substantially maintained free of oil in the liquid phase by discharging liquid and vapor from the lower part of one zone of large cross-section into the upper part of another such zone, passing the resulting liquid and vapor from the lower part of the last-mentioned zone at reduced pressure into a rectifying zone, and segregating the desired cracked product.

2,006,189
OIL SOLUBLE RESIN
Victor H. Turkington, Caldwell, N. J., assignor to Bakelite Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 13, 1930, Serial No. 502,269
3 Claims. (Cl. 260—4)



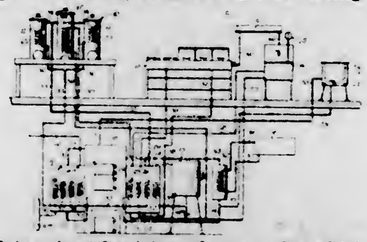
1. Synthetic resin characterised by solubility in fatty oils and comprising a condensation product of a methylene-containing agent and a cyclohexyl phenol of the monohydroxy type.

2,006,190
MATCH BOX
Harold F. Wilhelm, East Orange, N. J.
Application June 20, 1930, Serial No. 462,457
Renewed November 30, 1934
11 Claims. (Cl. 206—33)

1. In a match box, a case comprising a base cover, a top cover hinged thereto, a distorted book of matches in said case, said book comprising a striking part and a plurality of matches secured to said striking part, said matches being bent near their junctions with said striking part so that they underlie said striking part, said case having means for holding said distorted book therein.

2,006,191
ADJUSTABLE OVERFLOW DEVICE
Richard D. Andersen, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 14, 1930, Serial No. 467,677
1 Claim. (Cl. 137—21)

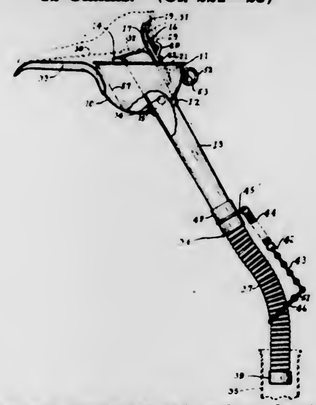
In combination with a receptacle having a charging line connected with a plurality of lines and adapted to convey a plurality of immiscible liquids, a device for determining at least two liquid levels in succession, comprising a substantially vertical conduit connected to the lower part of the receptacle so as to form a U therewith, a discharge conduit substantially parallel with the first mentioned conduit, said conduits being connected by at least two horizontal tubes, at least one of the tubes being provided with a valve, the discharge conduit comprising at least two separate sections, an upper one and a lower one, the lower one having a receptacle to receive the liquid from the upper section and being connected with said valve by means of a stem whereby said valve can be operated by turning the lower section of the discharge conduit.



2,006,192
METHOD OF AND COMPOSITION FOR REJUVENATING FABRICS
George M. Babcock, deceased, late of Evanston, Ill., by Bulia Babcock, administratrix, Evanston, Ill.
No Drawing. Application June 29, 1931, Serial No. 547,783
2 Claims. (Cl. 26—28)

1. A composition of matter for rejuvenating cloth made up of grain alcohol, ammonia, glacial acetic acid, muriatic acid, oil of lavender and chloroform.

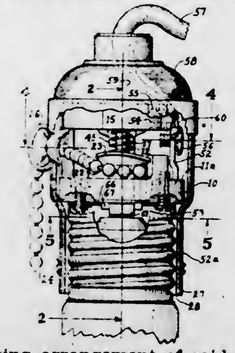
2,006,193
HEATING SYSTEM
Edward J. Bell, Chicago, Ill.
Application June 10, 1932, Serial No. 616,542
4 Claims. (Cl. 237—56)



3. In a heating system, the combination of a plurality of operating elements to be heated to different operating temperatures by the current flow induced by the heating and cooling of water as a heat transfer medium, a heat transfer coil connected with each of said elements to form

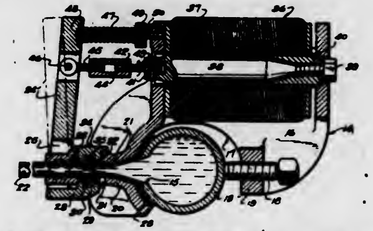
complete flow systems, and a source of heat common to all of said coils and having a maximum temperature limit, each of said coils having that

predetermined heat transfer capacity which will maintain the element associated therewith at its operating temperature when the source of heat is at said maximum temperature limit.



2,006,194
COMBINATION CAN OPENER, FUNNEL, AND FLEXIBLE PIPE ATTACHMENT
Charles F. Bertschinger, Waterbury, Conn., assignor to The Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application May 2, 1934, Serial No. 723,520
12 Claims. (Cl. 221—23)

2. In a can-opening spout or funnel article, an open bowl, a tube extending through said bowl and sealed in the base thereof, and a cutter secured to said tube for piercing the side of a can, said tube having apertures above the base of said bowl to permit liquid to drain from said bowl to said spout.

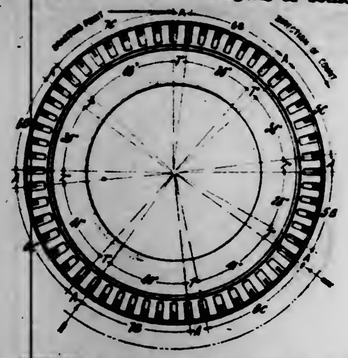


2,006,195
ELECTRIC PULL CHAIN SOCKET
Harmon J. Cook, Torrington, Conn.
Application January 27, 1931, Serial No. 511,523
11 Claims. (Cl. 173—354)

1. In an electric switch of the rotary type, an insulating stationary base having an annular depressed groove formed in the face thereof, a plurality of abrupt shouldered inclined recesses in said groove, stationary contact members arranged in alternate recesses, a rotatable contactor member having inclined arms to intermittently pass over said stationary contact members, an insulating carrier for supporting said contactor member and having telescoping relationship with said base, said carrier having a plurality of abrupt shouldered inclined cams adapted to support said arms and fit against said recesses, said carrier having a rim outside of said cams for engaging the surface of said base in overlapping relationship, and means for rotating said carrier,

the telescoping arrangement of said carrier and base and the interfitting of said cams in said recesses serving to obliterate the open air space and prevent the formation of arcs.

2,006,196
MEANS FOR SUPPLYING A POLISHING MEDIUM TO POLISHING MACHINES
Joseph P. Crowley, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Original application March 11, 1929, Serial No. 346,093. Divided and this application May 6, 1932, Serial No. 609,576
5 Claims. (Cl. 137—139)



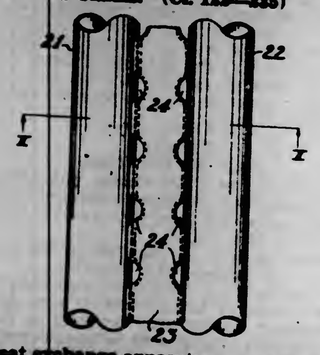
1. A valve including a housing, a compressible liner therein, a member adapted to engage the liner, a pivotal mounting therefor, means for rocking said member in a predetermined direction to normally hold the liner compressed to prevent the passage of fluid therethrough, electrical means operable to automatically render the compressing member ineffective at substantially predetermined intervals to permit the passage of fluid through said valve, and means for varying the rocking movement of said member to regulate the effective opening in said liner.

2,006,197
PNEUMATIC TIRE
Elliott S. Ewart, St. Clair Shores, and Arthur W. Bull, Grosse Pointe, Mich., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application October 5, 1934, Serial No. 746,996
8 Claims. (Cl. 152—14)

4. A tire having a tire tread comprising a plurality of groups of tread elements arranged circumferentially of the tire, the sizes of the elements in some of the groups being different from the sizes of the elements in another group and the circumferential lengths of some of the groups

being different from the lengths of some of the

other groups whereby aperiodicity of sound is produced during movement of the tire.



2,006,196
METHOD OF PREPARING HALOGENATED KETONES
Per K. Frolich and Peter J. Wiezevich, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application June 23, 1931, Serial No. 546,428
8 Claims. (Cl. 260—124)

1. The process of preparing halogenated ketones which comprises mixing an aliphatic acid halide and an olefine, and heating the mixture to at least approximately 100° C.

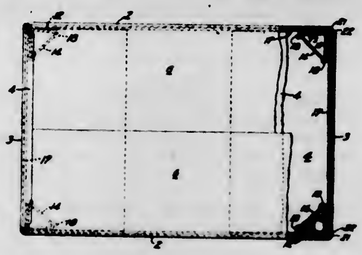
2,006,199
PROCESS FOR THE MANUFACTURE OF RESINS BY HYDROGENATION
Stewart C. Fulton, Elizabeth, and Vladimir Kalichevsky, Woodbury, N. J., assignors to Standard-I. G. Company
No Drawing. Application October 30, 1931, Serial No. 572,228
17 Claims. (Cl. 260—2)

1. The process of manufacturing resins, comprising subjecting substantially oil-free asphaltenes to hydrogenation.

2,006,200
APPARATUS FOR HEAT EXCHANGE
Walter C. Harpster, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application January 6, 1932, Serial No. 584,983
2 Claims. (Cl. 122—235)

1. Heat exchange apparatus, comprising a plurality of parallel units assembled to form a wall having a heat absorbing face, each unit including a plurality of primary conduits, a secondary conduit of relatively small cross sectional area having a face conforming to the external contour of the adjoining faces of the primary conduits and extending parallel with and in direct contact with the primary conduits, portions of the adjoining faces of the primary and secondary conduits being spaced apart.

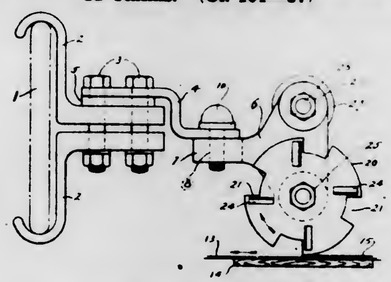
2,006,201
COLLAR SUPPORT
Albert P. Herringer, Cincinnati, Ohio, assignor to The Herringer Paper Co., Cincinnati, Ohio, a corporation of Ohio
Application December 19, 1932, Serial No. 647,857
1 Claim. (Cl. 223—18.6)



A collar support for shirts comprising a strip of flexible material, the lower edge thereof providing a medial friction point, the stock of said edge on either side of said point being recedingly cut out toward the upper edge and adjacent ends, said cutouts terminating to provide forwardly extending friction points intermediate said first point and said ends, the rear lower portions of said strip edge being plane and adapted to rest upon the shirt back within the neckband of the collar thereof, said medial point and second named points providing a three point support for the forward part of the strip, the upper edge of the strip having at least the intermediate portion thereof cut to define a plurality of tangents to the same arc whereby when the strip is bowed certain of said tangently cut portions of said upper edge will define an arcuate abutment portion disposed above the upper edge of the collar at each frontal side thereof and intermediate the central point of the lower edge and the respective forwardly extending points thereof, whereby pressure upon said arcuately curved abutment portion tends to rock the bowed strip forwardly slightly to effect digging of all of said points into the back of the shirt so as to prevent shifting of said strip.

2,006,202
PROCESS FOR HEAT TRANSMISSION
Hendrik Willem Huyser, Hilversum, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 27, 1933, Serial No. 662,997. In The Netherlands June 22, 1932
9 Claims. (Cl. 252—5)

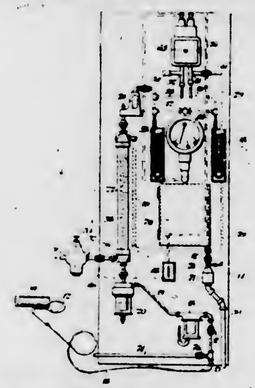
1. In a process for transmitting heat to fluids in indirect contact with heat-transmitting material, the step of employing an open chain alkylated cyclic compound as the heat-transmitting material.



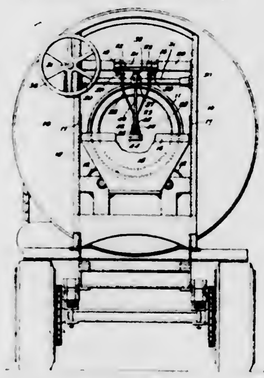
2,006,203
CARTON AND LINER FOR THE SAME
Harold Leslie, San Francisco, Calif., assignor to Fibreboard Products Inc., San Francisco, Calif., a corporation of Delaware
Application February 27, 1933, Serial No. 658,760
6 Claims. (Cl. 229—14)

1. A liner for a carton comprising a strip of fibrous material having a plurality of transverse creases, and folded to form wall sections and reinforcing columns having a uniform right angled triangular cross section, the perpendicular sides

of the column lying snugly in the corners of the carton.



2,006,204
STAMPING MACHINE
Sol Lifsitz, Detroit, Mich., assignor of one-half to Israel M. Hertz, Detroit, Mich.
Application December 29, 1934, Serial No. 759,633
11 Claims. (Cl. 101—37)



1. In a stamping machine, a shaft, a roller mounted on said shaft and having a stamping member mounted lengthwise on its periphery and projecting radially outward, said roller being normally freely rotatable on said shaft, a push piece associated with said roller and by means of which the roller can be manually rotated, such push piece lying wholly within the prolongation of the cylindrical surface projected from the facial circumference of said stamping member.

2,006,205
EXHAUST GAS ANALYZER
John D. Morgan, South Orange, N. J., assignor to Doherty Research Company, New York, N. Y., a corporation of Delaware
Application September 16, 1930, Serial No. 482,283
1 Claim. (Cl. 23—255)

A gas analyzer device for use in regulating combustion in an internal combustion engine, comprising a perforated sampling tube adapted to be inserted in the exhaust manifold of the engine, orifice means for muffling pulsating pressure in the exhaust gas removed by said tube from said manifold to substantially constant pressure, a cooler adapted to cool a hot gas stream of variable temperature to a uniform low temperature, a gas filtering element, a gas-air mixer having an air inlet, a continuous analyzer incorporating as one branch of a Wheatstone bridge an electric wire igniting element together with means for supplying current under constant voltage thereto, and means for determining by measurement of current flow through the wire the presence of combustible constituents in the exhaust gas passing thereover, and mechanism for causing gas to flow in succession through said sampling tube, muffling means, cooler and filtering element, and thence in admixture with a constant amount of added air at a uniform rate through said mixer and over said igniting element.

2,006,206
CLOSURE MECHANISM FOR THE DISCHARGE OPENINGS OF CONCRETE MIXER DRUMS
Charles F. Ball, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application August 1, 1931, Serial No. 554,539
5 Claims. (Cl. 83—73)

1. A closure mechanism for the axial discharge openings of rotatable concrete mixer drums, comprising a closure member; means mounting said member for rotation with said drum when in closing position, and for swinging movements to and from said closing position about an axis transverse to the drum axis; self-locking worm gearing mounted adjacent the drum opening; an arm actuated by said gearing; toggle-bars extending between said closure-mounting means and a fixed portion of the mixer framework; and a link connecting said arm and the knuckle joint of the toggle-bars.

2,006,207

OIL-SOLUBLE SYNTHETIC RESIN AND PROCESS FOR ITS MANUFACTURE

Madhav R. Bhagwat, Elizabeth, N. J., assignor to Combustion Utilities Corporation, New York, N. Y., a corporation of Maine

No Drawing. Application January 25, 1930, Serial No. 423,556

4 Claims. (Cl. 260—4)

1. The process comprising reacting a crude oxidation mixture containing formaldehyde, higher aldehydes and methanol which is produced by the partial oxidation of hydrocarbons in the vapor phase at elevated temperatures, in the presence of a basic catalyst, with tar acids having a boiling point in the range of 225° C. to 300° C. and higher obtained from low temperature tar, to effect a condensation reaction of the tar acids with aldehydes to form a resinous oil-soluble condensation product and thereafter distilling the unreacted oxidation products to recover a purified methanol therefrom.

2,006,208

DULL FINISH COATED PAPER

Donald B. Bradner, Oxford, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio, a corporation of Ohio

No Drawing. Application February 1, 1932, Serial No. 590,215

10 Claims. (Cl. 91—68)

5. Process of making dull finish coated paper which comprises applying an aqueous slurry containing uncooked starch to a paper stock, drying the coated paper, calendering and thereafter swelling the starch.

2,006,209

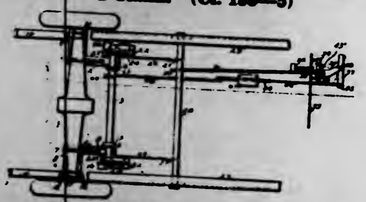
DULL FINISH COATED PAPER

Donald B. Bradner, Oxford, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio, a corporation of Ohio

No Drawing. Application May 25, 1933, Serial No. 672,906

3 Claims. (Cl. 91—68)

1. Process of making dull finish coated paper which comprises coating paper with an aqueous coating composition comprising pulverized cellulose, drying the coating, calendering the coating to the desired surface smoothness and thereafter moistening the coating.



2,006,210

ANTISKIDDING DEVICE

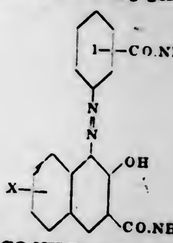
Archer Earl Bruffee, Portland, Oreg.

Application November 28, 1934, Serial No. 754,847

1 Claim. (Cl. 188—5)

In an antiskidding device, particularly for automobiles, the combination of vertical plungers, hingedly attached to the rear axle housing of an automobile, cams operatively connected with the plungers, a hung lever in front of a foot pedal of the automobile, and means between the hung lever and the cams to force the plungers into the ground upon depression of the foot pedal, with a shift lever adjacent to the driver's seat to remove the hung lever from the foot pedal and to swing the plungers into a horizontal position.

2,006,211



COLORED RUBBER PRODUCTS AND PROCESS OF PRODUCING THEM

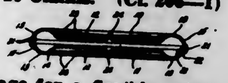
Ernst Fischer, Frankfort-on-the-Main-Hochst, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application February 19, 1934, Serial No. 712,091. In Germany February 22, 1933

5 Claims. (Cl. 18—59)

1. The process of producing colored rubber products which comprises mixing a rubber product with a water-insoluble monoazo-dyestuff corresponding to the following general formula:

wherein the $CO.NH.R_1$-group does not stand in ortho-position to the azo group and the benzene nucleus 1 may be substituted by alkyl, alkoxy, aryloxy-groups or halogen, X stands for hydrogen, halogen or alkoxy, R_1 means hydrogen, an alkyl, aryl, aralkyl or hydroaromatic radical and R_2 an aryl radical, and then vulcanizing the mixture.



2,006,212

PACKAGE

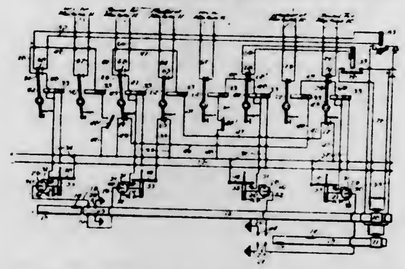
Peter Grabler, Rocky River, Ohio, assignor to L. E. Shunk, Akron, Ohio

Application March 26, 1934, Serial No. 717,324

10 Claims. (Cl. 206—1)

4. A package for a flexible article comprising a pair of circular covers of metal foil adapted to be twisted by hand, each cover having a substantially flat portion and an annular portion surrounding the flat portion and raised thereabove, and the outer free edge of the annular portion of one cover being pressed tightly against and spun over upon the outer free edge of the other cover, whereby the package is tightly sealed but openable without tools by twisting in the hands, said annular portions being of a height to exert a reinforcing effect on the package as a whole and to furnish tightly embracing edges forming a sealed joint of considerable strength.

2,006,213



ELECTRIC CONTROL SYSTEM

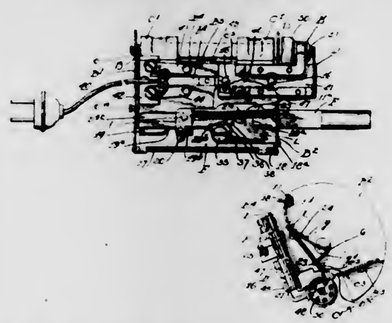
Edgar N. Halliday, Chicago, Ill.

Application July 9, 1931, Serial No. 549,791

15 Claims. (Cl. 88—17)

1. The combination of two primary control circuits each including a switch operating magnet; two secondary control circuits each including a switch operable by one of said magnets; a grid glow control tube in each of said primary circuits; a moving picture projector including a traveling moving picture film carrying longitudinally spaced means for unbalancing and there-

by actuating said tubes in succession to actuate said primary circuits to actuate said switches to actuate said secondary circuits; and separate operating circuits operable by said secondary circuits and arranged to cause actuation of desired instrumentalities.



2,006,214

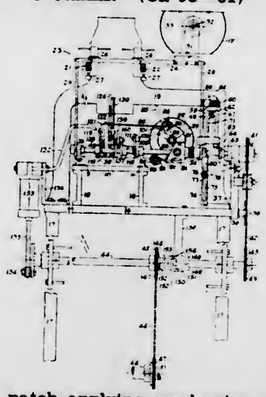
DISPENSING APPARATUS

Ivar Jeppsson, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois

Application January 27, 1934, Serial No. 708,561

6 Claims. (Cl. 312—86)

1. A dispensing device comprising a casing having a longitudinally extending chamber constituting a receptacle for a plural quantity of articles to be individually dispensed, the casing being formed for admitting a plurality of said articles to the upper part of the receptacle, the wall of the receptacle including two members, one of which is movable relatively to the other transversely of the length of the receptacle to open a passage laterally with respect to the articles in the receptacle for an individual article to pass the movable wall member to the lower side thereof; a seat in the casing positioned therein for receiving an individual article passing the movable wall member; means for operating the movable wall member to open the passage for the individual article to said seat, and means associated with the movable wall member and operated in the movement of the latter for stressing the individual article toward said seat.



2,006,215

MECHANISM FOR MAKING AND APPLYING TRANSPARENT WINDOW PATCHES TO ENVELOPES

Henry Kassekert, Maple Shade, N. J., and Frank J. Kaeser, Philadelphia, Pa., assignors to E. J. Spangler Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 14, 1933, Serial No. 651,756

5 Claims. (Cl. 93—61)

1. In a patch-applying mechanism, the combination with a platen for an envelope blank having a window opening cut therein and adhesive freshly applied thereto around said opening, of a frame mounted to extend over and above said platen, a shaft mounted in said frame, means to support a roll of a ribbon of patch paper, the width of said ribbon being a little wider than the short dimension of said window, drawing means to normally draw said ribbon from said roll at a constant linear speed, a feed mechanism mounted in said frame and means driven by said shaft to intermittently rotate said mechanism to repeatedly advance, at each actuation thereof, a predetermined invariable length of said ribbon, said length being a little greater than the long dimension of said window in said blank, means to sever a patch from the free end of said ribbon after it has been advanced by said feed mechanism, stationary guideways mounted on said frame, in a fixed relationship with respect to said frame and engaging the opposite longitudinal sides of said ribbon to support the free end of said ribbon above the surface of said blank as it is advanced by said feed mechanism and to support said patch by its opposite longer side edges after severance from said ribbon, a patch-applying plunger mounted upon said frame and intermittently operated by said shaft to quickly force said severed patch downwardly, out from said guideway and to carry said patch to said envelope blank, over said opening and to press said patch into firm contact with said adhesive adjacent said opening.

2,006,216

INHIBITOR

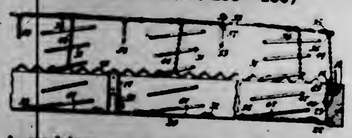
Arthur Macarthur and Anthony James Hailwood, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application February 21, 1933, Serial No. 657,844. In Great Britain February 26, 1932

12 Claims. (Cl. 148—8)

7. A cleaning and picking bath for metals com-

prising a dilute, non-oxidising acid and a small amount of a compound of the formula:



wherein R_1 is a long chain alkyl radical of not less than 8 carbon atoms, X is a hydroxyl or acid group, and wherein R_2, R_3 and R_4 are alkyl radicals or the valences at R_2, R_3 and R_4 are satisfied by including N in a pyridine ring.

2,006,217
OPTICAL SYSTEM FOR PHOTOGRAPHIC SOUND APPARATUS
James J. Morey, Chicago, Ill., assignor to Lennie L. Morey, Portland, Oreg.
Application February 10, 1932, Serial No. 591,937
Renewed December 4, 1934
4 Claims. (Cl. 88—24)

1. Means for performing the function of an optical slit comprising a pair of triangular prisms mounted laterally adjacent, in combination with a source of light and a condenser lens directing said light onto an oblique surface of one of the prisms, the other prism having an oblique face which is parallel to that of the first prism and mounted opposite the same to receive the reflected light, and a focusing lens system through which the light is reflected from said second prism; the face of the first prism through which the light is reflected from said oblique surface of said prism being partially masked to limit the cross section of the reflected beam emerging therefrom.

2,006,218
SPRING CUSHION FOR FURNITURE
Frank X. Nemmer and Albert W. Nemmer, Cheektowaga, N. Y.
Application February 17, 1934, Serial No. 711,746
2 Claims. (Cl. 155—180)

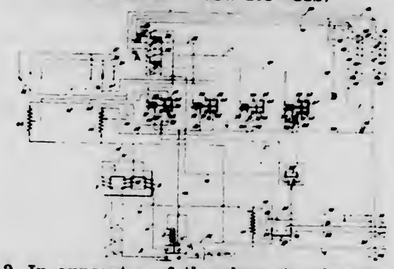
2. A cushion for furniture comprising a wall provided at its upper edge with a downwardly turned flange arranged on the exterior of said wall and forming a downwardly opening channel, a flexible covering having a marginal part extending into said channel, a clamping member arranged within said channel and engaging with the marginal part of said covering therein, and means for retaining said clamping member in said channel and in engagement with said marginal part of the covering consisting of a lip struck out of said wall and bent outwardly and upwardly against the underside of said clamping member, and that part of said wall adjacent to the free end and sides of said lip being deflected inwardly and forming a recess whereby access is obtained from the outer side of said wall to said lip for bending the latter from the wall against said clamping member.

2,006,219
BLANC FIXE
Howard S. McQuaid, Lakewood, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application February 17, 1934, Serial No. 711,731
2 Claims. (Cl. 23—122)

1. In the manufacture of barium sulfate, the steps comprising reacting such quantities of barium sulfide and ammonium sulfate as to leave no substantial excess of either, and separating, washing and drying the precipitated barium sulfate to volatilize adsorbed ammonium sulfid.

2,006,220
HOUSE CAR
John P. McWilliams and Frank Ditchfield, Cleveland, Ohio, assignors to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application March 16, 1933, Serial No. 661,036
12 Claims. (Cl. 105—409)

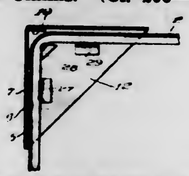
5. A metal sheathed box car converted from a wood sheathed box car originally having a metal underframe of cross members and a Z-bar side sill with the web thereof horizontally overlying and secured to the tops of the cross members, the converted car having a Z-bar side sill with its web disposed vertically to thereby present its greater section modulus to vertical stresses, the lower flange of the Z-bar being secured to the tops of the cross members and the upper flange of the Z-bar projecting horizontally outwardly of the vertical plane through the ends of the cross members; metal posts anchored at their lower ends to the upper Z-bar flange; metal sheathing secured to the outer sides of said posts; and a side plate to which the upper edge portions of the sheathing are secured.



2,006,221
REGENERATION OF PLATINUM CATALYSTS
Earl S. Ridler, Shaker Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application June 22, 1933, Serial No. 677,173
15 Claims. (Cl. 23—238)

1. The process of regenerating a spent platinum catalyst deposited on a carrier which comprises impregnating said catalyst with a liquid preparation of a volatile organic carboxylic acid and substantially completely removing said treating agent from said catalyst.

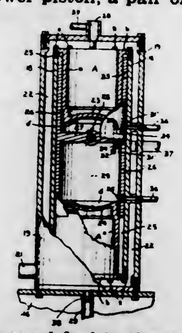
2,006,222
TREATMENT OF PLATINUM CONTACT MASSES
Earl S. Ridler, Shaker Heights, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application June 22, 1933, Serial No. 677,174
5 Claims. (Cl. 23—238)



1. The process of regenerating a spent platinized sulfuric acid contact mass which comprises treating said mass with formic acid.

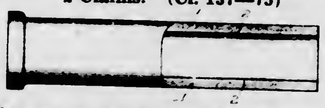
2,006,223
CONTROL SYSTEM FOR THEATER LIGHTING CIRCUITS
Albert Le Roy Upton, St. Louis, Mo.
Application January 16, 1933, Serial No. 651,868
14 Claims. (Cl. 175—312)

2. In apparatus of the character described, a reactor having a core adapted to be influenced by a unidirectional current, a plurality of direct current circuits, means for influencing said core by one only of said circuits at a time automatically according to the relative voltages of the circuits, and means for selectively varying the potential in said circuits.



2,006,224
DEVICE FOR AND METHOD OF PACKING AND PROTECTING OBJECTS
Grable B. Weber, Chicago, and Albert D. Sanders, Jr., Evanston, Ill.
Application October 29, 1930, Serial No. 491,824
11 Claims. (Cl. 206—60)

2. A packing and protective device for table tops or the like, comprising a corner piece adapted to fit over a corner of said top, said piece having a projecting tongue portion adapted to engage said top to prevent ready removal of said piece when fitted over said corner.



2,006,225
INTERNAL COMBUSTION ENGINE
Cornelius R. Wigness, Harlan, Iowa, assignor of one-fourth to William J. McDonald, Portsmouth, Iowa
Application March 1, 1933, Serial No. 659,144
1 Claim. (Cl. 123—61)

In a double acting internal combustion engine, a power cylinder closed at its ends and provided with a pair of inlet ports for compressed fuel, a pair of inlet ports for compressed air and a pair of exhaust outlet ports, a power piston working in and controlling the ports of the power cylinder and having cylindrical extensions open at their ends each provided with a single inlet port for compressed fuel, an inlet port for compressed air and an exhaust outlet port adapted, respectively, to register with a compressed fuel inlet port, a compressed air inlet port and an exhaust outlet port of said power cylinder and permitting formation of fuel mixtures in the cylindrical extensions of said power piston, a pair of conduits for

delivering compressed fuel to the fuel inlet ports of the power cylinder, a pivot-pin carried by the power piston and having an extension, a crankshaft connected with and rotatable by actuation of the power piston, an air pump cylinder provided at its ends with check valves, air tubes leading from the air pump cylinder to the air inlet ports of the power cylinder, a piston in the air pump cylinder and mounted on the extension of said pivot-pin for compressing and delivering compressed air to said air tubes by actuation of said power piston, and electrical devices for igniting the fuel mixtures to cause actuation of the power piston.

2,006,226
PIPE AND MEANS AND METHOD OF PROTECTING SAME
Robert Gordon Yaxley, Waterford, N. Y.
Application June 28, 1933, Serial No. 678,013
2 Claims. (Cl. 137—75)

1. A new article of manufacture comprising a metal conduit for carrying liquid and a lining of slag intimately and permanently fused on and bonded to the interior of the conduit for protecting the surface of said conduit against corrosion and deterioration, said lining being insoluble in the liquid carried by the conduit.

2,006,227
CONTACT INSECTICIDE
Euclid W. Bousquet, Wilmington, Del., assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application October 19, 1932, Serial No. 638,600
8 Claims. (Cl. 167—22)

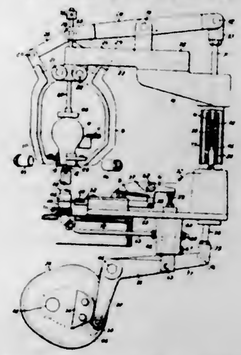
1. A contact insecticide comprising lecithin.

2,006,226
SLIDING DOOR
Harold F. Collins, Rockford, Ill., assignor to Howard D. Coleman, Rockford, Ill.
Application February 6, 1930, Serial No. 426,216
21 Claims. (Cl. 20—20)

1. The combination of a door having a plurality of panels hinged together in edge to edge relation, a door frame providing an opening with an abutment for engagement by marginal edge portions of the panels, a plurality of actuating elements pivotally mounted on the door panels, and a track engaged by said elements to guide the door in a plane approximately parallel to the door opening, said elements being swingable relative to the individual panels as the door approaches or leaves its closed position to impart to the individual panels a relatively abrupt movement toward or from the plane of the door opening whereby to carry said marginal edge portions toward or from said abutment.

2,006,229
ART OF COATING PAPER
Charles N. Cone and Earl D. Brown, Seattle, Wash., assignors, by mesne assignments, to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application March 5, 1930, Serial No. 433,530
3 Claims. (Cl. 91—68)

1. The process of making non-sticking coated paper, which comprises extracting a vegetable protein from seed material, digesting such protein several hours at raised temperature in a weakly alkaline solution to a form soluble in lime water even after being dried out, dissolving the protein in a weakly alkaline solution and incorporating with the solution a larger amount of a finely divided lime-containing filler than the protein to form a slurry, applying such slurry of lime-containing material and changed vegetable protein to the paper, and drying, whereby a water-resistant non-sticking paper sheet is attained.

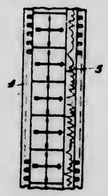


2,006,230
INDIA-RUBBER AND LIKE BALL
Edward John Debbins, London, England, assignor to Geogly Limited, London, England, a British company
Application April 19, 1933, Serial No. 666,815
In Great Britain November 14, 1932
4 Claims. (Cl. 273—58)

1. A spherical bouncing ball having high resilience and being easily deformable so that it will bounce effectively upon even comparatively soft surfaces and comprising at least one part of sponge rubber and at least one other part of hard rubber which parts are in such positions that the ball is more easily deformable by impact in cer-

tain radial directions than in others while bouncing effectively as a result of impact in all radial directions so that it is capable of rebounding at various unexpected angles and can be rapidly bounced and caught by the hand.

2,006,231
METHOD OF AND APPARATUS FOR SEALING ELECTRIC LAMPS AND SIMILAR ARTICLES
Frank J. Malley, Cleveland Heights, Ohio, and Ralph B. Thomas, Salem, Mass., assignors to General Electric Company, a corporation of New York
Application September 28, 1934, Serial No. 745,866
6 Claims. (Cl. 49—78)



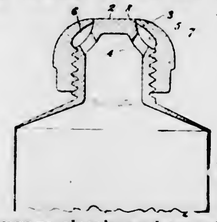
1. The method of sealing a bulb and stem tube together which consists in heating a portion of the neck of said bulb and the end portion of said tube until they are fused together to form a seal, in surrounding the said seal with a mold with its bottom portion separated from the bottom of said seal and then in blowing air into said bulb to force said seal against the said bottom portion of the mold and to move the stem tube longitudinally.

2,006,232
VEHICLE INSULATION
Charles A. Upson, Lockport, N. Y., assignor to The Upson Company, Lockport, N. Y., a corporation of New York
Application October 2, 1931, Serial No. 566,528
8 Claims. (Cl. 154—44)

1. A vehicle body construction including an outer body layer, characterized by a layer of felt paper and a layer of embossed paper on the inner side of said outer layer, and adhesive affixing said layers to each other and to said outer layer.

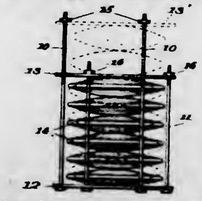
2,006,233
COMBINED PICTURE AND SOUND RECORDING AND REPRODUCTION IN MOTION PICTURES
Henri Chretien, Saint Cloud, France
Application January 28, 1929, Serial No. 335,565
In France April 29, 1927
1 Claim. (Cl. 88—16.2)

The improvement in the art of projected sound pictures which comprises first determining what portion of the available width of the film shall be devoted to the sound track, taking a picture while optically compressing it laterally to bring it within the space of the remaining portion of such available width, imposing the sound track upon said predetermined portion, and projecting said picture with optical restoration to its normal proportions while simultaneously reproducing the sound, whereby satisfactory uniformity and quality of sound reproduction may be obtained without sacrifice of size of projected picture.



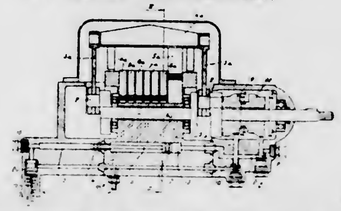
2,006,234
CONSTRUCTION OF BRUSH
Eric Leopold Hugo Cosby, London, England
Application November 21, 1934, Serial No. 754,140
In Great Britain June 17, 1933
2 Claims. (Cl. 15—143)

1. A brush comprising a back of spherical shape and cut away at one side, bristles secured to said cut-away side of the back and projecting therefrom, and a weight in the back between said cut-away side thereof and a diametrical plane through the back opposite to said cut-away side and providing a preponderance of weight adjacent to the bristles to cause the bristles and the back to rest on a support when placed thereon.



2,006,235
SEALING DEVICE FOR COLLAPSIBLE TUBES AND THE LIKE
Serafino De Faveri and Riccardo Cimatti, London, England, assignors to Monocap Limited, London, England
Application October 31, 1934, Serial No. 750,876
In Great Britain September 28, 1933
7 Claims. (Cl. 221—60)

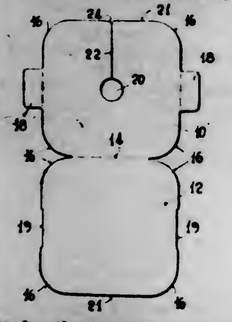
1. A closure for collapsible tubes and other containers of the kind set forth, comprising an apertured delivery nozzle in the form of a truncated cone of sharp taper and of small depth in proportion to its base diameter, having an incurved surface whereby the nozzle is given an increasing taper from tip to root, and a cap adjustable on this nozzle and terminating at its outer end in a narrow ring having a rounded conical edge



adapted to engage closely and smoothly over the smaller end of the said nozzle.

2,006,236
FEEDING RESERVOIR FOR OIL FILLED CABLES
Luigi Emanueli, Milan Italy, assignor to Societá Italiana Pirelli, a company of Italy
Application November 24, 1931, Serial No. 577,140
In Italy December 10, 1930
2 Claims. (Cl. 137—71)

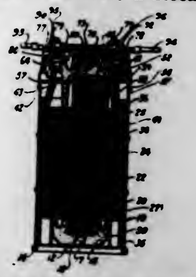
1. Apparatus for maintaining pressure in fluid filled high tension electric cables, comprising an enclosed feeding reservoir in communication with a fluid filled cable, a hermetically sealed cell within said reservoir containing an expansible gas and serving to vary the capacity of said reservoir in accordance with the pressure of fluid therein, and a pair of discs having rods therebetween serving normally to compress said cell whereby the gas within said cell is constantly maintained at a pressure greater than atmospheric pressure.



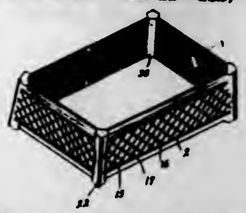
2,006,237
HYDRAULIC ENGINE
Elysee Marius Eynard, Boulogne-Billancourt, France
Application March 24, 1934, Serial No. 717,252
In France April 7, 1933
3 Claims. (Cl. 121—120)

1. In combination with a motor adapted to be driven by hydraulic power, a distributor for controlling the supply of pressure fluid to said motor, comprising, in combination, a slide valve including two coupled differential pistons adapted to move in corresponding cylinders, interconnected fluid inlets for admitting fluid to the opposite ends of said cylinders, the larger of said cylinders

communicating with said motor in such wise that while the smaller piston is subjected to the full pressure of said fluid the larger piston is subjected to said pressure reduced by the loss of head determined by the load on said motor, and pressure control means mounted in the fluid inlet to said larger cylinder for preventing admission of fluid into said larger cylinder until the pressure of the fluid has reached a predetermined value.



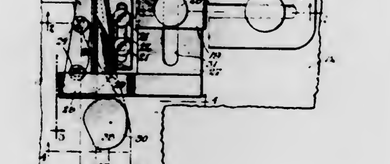
2,006,238
COCKTAIL SKIRT
Irving Fierman and Rosemary Reiwing, New York, N. Y.
Application January 22, 1935, Serial No. 3,131
3 Claims. (Cl. 66—53)



1. A cover for the base of a receptacle having a stem and an enlarged base below the stem, said cover being formed of a single piece of sheet material, and comprising upper and lower cover members integrally joined along the central portion of one edge, flaps on the two adjacent edges of the cover member passing beneath and secured to the lower face of the lower cover member, the other edge of the upper and lower cover members being unconnected, the edges of the lower cover member over which the flaps are folded having cut out portions therein so that the flaps do not extend beyond said edges, said upper cover member having a central aperture therein of such size as to receive and accommodate the stem of a receptacle, and a slit having its edges substantially in contact with one another connecting said opening and the free unconnected edge of the upper cover member, the corners of said slit at the unconnected edge being rounded, the corners of said upper and lower cover members being unconnected and rounded so that said cover member may fit bases of varying size and shape without bulging, the upper cover member having some portions only of its total area in the plane of contact with the base, whereby a plurality of lines of contact between the cover member and the base are provded so that when the base becomes damp the cover will hold more firmly thereon.

2,006,239
IGNITION COIL CONSTRUCTION
Adelbert J. Gegel, Toledo, Ohio, assignor to The Electric Auto-Lite Company, Toledo, Ohio, a corporation of Ohio
Application April 30, 1934, Serial No. 721,569
1 Claim. (Cl. 175—361)

An ignition coil including in combination, a plurality of windings enclosed by a metallic casing; a non-conducting cover forming part of said casing; terminals for said windings carried by said cover; a removable closure coacting with said cover to form a chamber enclosing a terminal for one of said windings, said removable cover being provided with openings through which terminals carried by the non-conducting cover project, the removable cover being provided with a lateral opening through which extends the circuit connector for the terminal located within said chamber; a block of compressible rubber having an upwardly projecting peripheral rib engageable with the removable cover; said block of rubber having a semi-cylindrical groove engageable with the circuit connector for effecting a hermetical seal for said chamber; and means associated with said primary terminals for holding said removable cover in position compressing said block of rubber into intimate contact with the cover and the circuit conductor.



2,006,240
MOLD JACKET
James F. Hines, Lakewood, Ohio
Application April 11, 1931, Serial No. 529,422
3 Claims. (Cl. 22—112)

1. A mold jacket having its outer surface formed with a plurality of intersecting ribs reenforcing a side plate element, and edges of approximately the depth of said ribs and of outwardly concave arcuate cross section extending along the top and bottom of said side plate element, the inner extremity of said arcuate edge intersecting said ribs, and the outer extremity of said arcuate edge being approximately tangent to the inner surface of the jacket.

2,006,241
METHOD OF FELLING AND CUTTING FELLED TREES
Thomas Hutchinson, Newport, Oreg.
Application January 30, 1935, Serial No. 4,156
2 Claims. (Cl. 144—34)

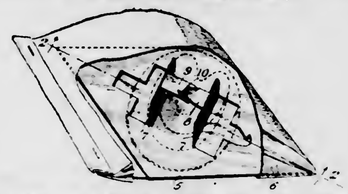
1. The method of felling and cutting felled trees including the making of mechanically cut holes in a row partly through a tree, making a mechanically cut main hole through the tree at one end of the first-mentoned holes, then making two rows of mechanically cut holes positioned at an angle to the said row of holes so that they will merge into said main hole, the last-mentioned holes being on the opposite side of the tree to the first-mentioned holes, and finally

cutting away the material contained between the respective holes.

2,006,242
AUTOMOBILE LIFTING DEVICE
Tomoso Imai, Honolulu, Territory of Hawaii
Application July 31, 1934, Serial No. 737,794
8 Claims. (Cl. 254—86)

1. An automobile lifting device comprising a bracket member having means for attaching it to an axle of an automobile, a pair of lifting arms pivoted intermediate their ends on said member to swing vertically, a cross member, links operatively connecting said cross member and the inner ends of said arms, and means supported on said bracket member and connected to said cross member for actuating the latter, said links and said lifting arms.

2,006,243
PIPING ATTACHMENT FOR SEWING MACHINES
Adam Jekulaitis, Brooklyn, N. Y.
Application January 2, 1935, Serial No. 126
4 Claims. (Cl. 112—137)



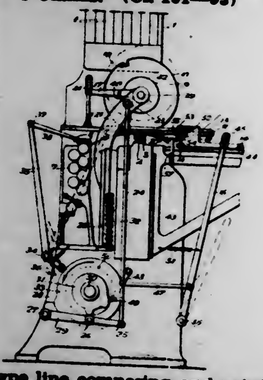
1. A piping attachment for sewing machines comprising a plate, means for attaching the plate to a sewing machine, a folder sleeve connected to said plate, a lever pivoted to said plate, and a folder arm on said lever adapted to cooperate with the folder sleeve on the plate and the sewing machine to pipe cloth fed through said folder sleeve.

2,006,244
LIQUID-SEPARATING DEVICE
Julius F. Kopsa, Chicago, Ill.
Application July 10, 1933, Serial No. 679,674
8 Claims. (Cl. 183—77)

1. In a device for separating liquid in suspension from gas, the combination of an elongated, vertical extending casing, a tubular, vertically extending shell disposed in the casing in spaced relation with respect to the side wall thereof and provided with circumferential side openings, means associated with the casing for directing the gas vertically through the shell, a deflector mounted in the shell for rotation on a vertical axis and having radially extending blades whereby it is caused to rotate in response to passage of the gas through the shell and the liquid in suspension is caused by centrifugal force to be thrown outwardly, and a washer-shaped element disposed wholly within the shell and so that it underlies the blades of the deflector and having an outwardly and downwardly inclined top face for directing the liquid thrown outwardly by the deflector through the side openings in the shell and into the space between the shell and the side wall of the casing.

2,006,245
HAT BRIM PROTECTOR
James H. Marshall, Hamlet, N. C., assignor of one-half to Francis E. Campbell and one-fourth to Clyde C. Kirkley and Noah M. Gibson, all of Hamlet, N. C.
Application May 21, 1934, Serial No. 726,806
1 Claim. (Cl. 223—18.6)

A protector of the character described comprising a single sheet of relatively stiff flat material, a pair of normally flat flaps of a size approximating the interior length of a hat crown cut from the sheet of material at its center in spaced relation to each other and adapted to be bent to extend at right angles from one face of the sheet of material in parallel relation to each other for their snug fitting within the crown of the hat the dimension of the sheet between and parallel to the upstanding flaps being greater than the length of the flaps to have the hat brim



rest upon the sheet of material, and tongues on the said flaps and separably interlocked with each other to hold the said flaps in their right-angular disposition relative to the sheet of material, the said flaps and sheet of material being adapted to maintain shape to the brim and crown of the hat.

2,006,246

TYPE LINE COMPOSING AND PRINTING MACHINE USING CIRCULATING PATRICES

Paul Marti, Winterthur, Switzerland, assignor to Schweiz. Lokomotiv- und Maschinenfabrik, Winterthur, Switzerland

Application August 8, 1933, Serial No. 684,245
In Germany August 16, 1932
3 Claims. (Cl. 101—93)

1. In a type line composing and printing machine of the type described, in combination, a printing device having a rotatable printing cylinder, means for rotating said cylinder by steps, a resilient printing form mounted on said cylinder, a device for feeding printing paper into printing position under said cylinder between two successive printing operations of said printing device, a type line setting device, a spacer or justifier device, an inking device correlated to said printing device and adapted for inking in a set type line under said cylinder before two successive printing operations of said cylinder with the rotational adjustment of the latter unaltered, and means for driving said printing device, said printing paper feed device, and said inking device in timed relationship to print a transparent sheet fed to said cylinder on both sides during the second of said successive printing operations by contact of one side directly with the ink still present on the respective type line and of the other side with the part of the ink transferred from said type line onto said printing form during the first of said successive printing operations.

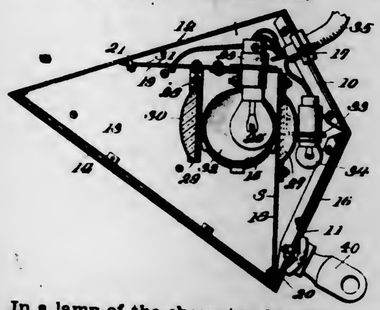
2,006,247

LEASHING OF HANKS OF YARN

Percy William Metcalfe, Halifax, England, assignor of one-half to Clayton Metcalfe & Company, Limited, Halifax, England, a corporation of Great Britain

Application May 25, 1933, Serial No. 672,888
In Great Britain June 1, 1932
2 Claims. (Cl. 28—21)

1. A method of leashing hanks of yarn consisting of automatically stopping the reeling machine every time a predetermined length of yarn has been wound on the reel, separating and indicating each length by lease bands, securing the convolutions of the completed hank as in ordinary reeling



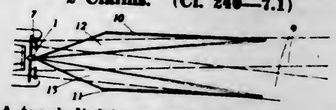
with a tie band, and securing the starting and finishing ends of the hank to said band.

2,006,248

HEADLIGHT

Herluf Nielsen, New York, N. Y.

Application October 2, 1933, Serial No. 691,847
12 Claims. (Cl. 240—7.1)



1. In a lamp of the character described, a casing provided with a forwardly and downwardly inclined top wall and with laterally and downwardly inclined side walls, a support member located within said casing and having an overhanging portion, lamp supporting means carried by said overhanging portion, and auxiliary lamp casings on said side walls each provided with lamp supporting means, said auxiliary casings being so constructed and arranged as to project rearwardly and slightly laterally directed beams of light from the lamps therein.

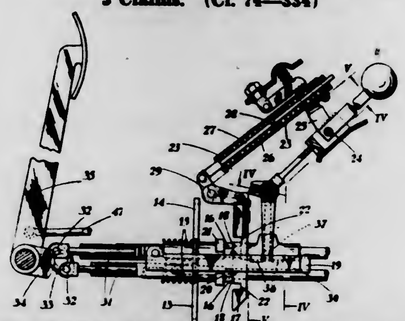
2,006,249

PROJECTING LAMP FOR MOTOR VEHICLES

Ottmar Rall, Zurich, Switzerland

Application January 20, 1933, Serial No. 652,615
In Switzerland November 19, 1932
2 Claims. (Cl. 240—7.1)

1. A track light projecting lamp for motor vehicles, comprising in combination: a casing arranged on the vehicle; a source of light in said casing comprising two linear incandescent filaments arranged at an angle to one another; and an objective for projecting images of said incandescent filaments in substantial alinement with



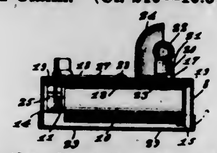
the wheels of the vehicle, whereby two narrow brightly illuminated bands of light visible from a distance and indicating the track width required by the vehicle are projected on to the road on which the vehicle is travelling.

2,006,250

CHANGE SPEED MECHANISM

Percy Riley, Coventry, England

Application October 12, 1934, Serial No. 748,120
In Great Britain October 12, 1933
3 Claims. (Cl. 74—334)



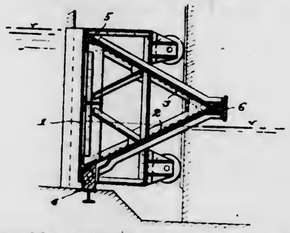
1. A preselective change-speed mechanism comprising two portions in series, a common selector control, one portion having a striking fork operable as a result of the lateral movement of the selector control and the other portion having a striking fork operable as a result of a movement of the selector control in another direction, connections between the portions and the selector control whereby movements of the selector control load springs by which the necessary movement of the striking forks is effected, a main control, and means whereby the necessary movement of the striking forks is effected only on the operation of the main control.

2,006,251

LIGHTING UNIT FOR LANTERNS

Irving E. Rollins, Worcester, Mass.

Application July 13, 1934, Serial No. 735,057
1 Claim. (Cl. 240—10.67)



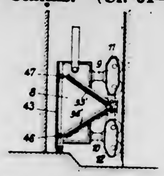
A unit of the character described comprising a casing having upper and lower sections separably interfitted with each other, the upper section constituting a body part of the casing and the lower section a lid part, the latter being telescopically fitted upon the body part and serving as a base, an insulating plate on the upper section, a battery clip carried by said plate and holding a battery therein, a contact engaged with the clip and exposed through the upper section, a bulb socket about said contact, a lighting bulb within the socket and engaged with the contact, the said clip being adapted for engagement with one pole of the battery, a saddling clip for engagement with the other pole of the battery and having a contact closed through the upper section, and a switch blade engageable with the last-named contact and pivoted to the upper section for closing a circuit between the bulb and battery.

2,006,252

MOVABLE WEIR

Hans Zimmermann, Dortmund, Germany, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany

Application February 10, 1932, Serial No. 592,103
In Germany January 23, 1931
6 Claims. (Cl. 61—28)



1. A movable weir of the Stoney roller type comprising a weir body consisting substantially of two main girders and a weir wall and having a continuous triangular cross section, the said main girders and the weir wall representing the sides of the triangle, said body also including two beams for the main girders located adjacent the upper and lower edges of the weir wall and a common beam for connecting the main girders, said beams forming the edges of the triangle.

2,006,253

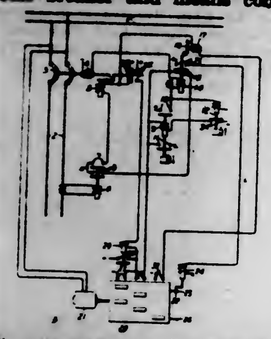
MOVABLE WEIR

Hans Zimmermann, Dortmund, Germany, assignor to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany

Application July 9, 1934, Serial No. 734,412
In Germany October 29, 1931
3 Claims. (Cl. 61—28)

1. Movable weir of the Stoney roller type the body of which has a quadrangular cross-section comprising a weir wall, upper and lower main girders, the said main girders being substantially parallel and connected at their one end with the weir wall, beams at the ends of the main girders, lateral end plates to which the beams are connected, the beams at the free ends of the main girders being substantially parallel in a horizontal level except their end members in the end field, which end members are so inclined that they converge and intersect each other in the end plates in a single point so that a triangle of beams is formed in the end fields.

2,006,254



AUTOMATIC RECLOSING CIRCUIT BREAKER SYSTEM

Arvid E. Anderson, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York

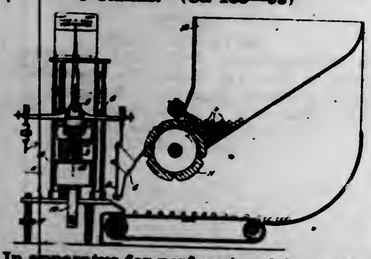
Application August 23, 1934, Serial No. 741,085
8 Claims. (Cl. 175—294)

1. In combination, two electric circuits, a circuit breaker interconnecting said circuits, and means for effecting a substantially instantaneous

reclosure of said circuit breaker including fault responsive means for effecting the opening of said circuit breaker and means controlled by

said fault responsive means for initiating the closing operation of said circuit breaker prior to the opening thereof.

2,006,255



DAMPENER FOR WEIGHING APPARATUS

Cyril Best, Deptford, London, England

Application January 12, 1935, Serial No. 1,562

In Great Britain January 9, 1934

6 Claims. (Cl. 188—93)

1. In apparatus for performing delicate weighing operations of the type provided with a weigh-beam, means associated with said weigh-beam for damping oscillations induced therein, said means comprising a vane moving in a fluid and having at least a portion thereof flexibly connected with said weigh-beam, whereby the said flexibly connected portion of the vane may lag behind the weigh-beam in reaching a state of equilibrium during a weighing operation.

2,006,256

TREATING SCRAP STORAGE BATTERY PLATES AND LEAD-BEARING MATERIALS OF SIMILAR COMPOSITION

Jesse O. Betterton and Charles W. Hanson, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application September 13, 1932, Serial No. 633,943. Renewed December 28, 1934

11 Claims. (Cl. 75—15)

1. In the treatment of material containing high percentages of lead contaminated with antimony, such as storage batteries and the like, the process which consists of charging a quantity of such material together with approximately 1.6% of its weight of petroleum coke fines to a reverberatory furnace containing the litharge and antimony oxide resulting from the final softening stage of the preceding charge, maintaining the furnace at a temperature of 1600° F. to 1850° F. until the material is completely melted and three molten layers form in the furnace comprising a top slag layer of oxidized lead and antimony, an intermediate layer of molten matte and a bottom layer of metallic lead containing some antimony, applying finely divided petroleum coke to the top layer whereby a substantial portion of the lead in said layer is reduced to the metallic state, removing the first and intermediate layers from the bath, agitating the remaining bottom layer under oxidizing conditions until the antimony content of the softened lead is below .02% and tapping the softened lead from the furnace

---

2,006,257

SMELTING SCRAP BATTERY PLATES AND THE LIKE

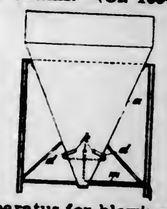
Jesse O. Betterton, Metuchen, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application January 12, 1933, Serial No. 651,361. Renewed December 28, 1934

12 Claims. (Cl. 75—15)

1. The process of treating scrap battery plates which comprises mixing said plates with approximately 1.6% of their weight of petroleum coke, charging same to a reverberatory furnace containing oxides of antimony and lead from the preceding charge, smelting same therein at a temperature of from 1650° F. to 1850° F., adding a mixture of soda ash and petroleum coke in the approximate respective quantities of two percent and one-third of one percent of the weight of the scrap treated thereby forming a top slag layer of sodium sulphate, an intermediate slag layer containing 30% to 35% antimony and a bottom layer of lead containing less than two percent antimony, removing the top and intermediate slags from the furnace, subjecting the lower remaining layer to oxidizing conditions sufficient to soften the lead and reduce its antimony content to below 0.05% and tapping the softened lead from the furnace.

2,006,258



DEVICE FOR BLOWING FIRE-EXTINGUISHING GAS INTO STORAGE BINS CARRYING MORE OR LESS FINE MATERIALS

Martin Betzler, Neuruppin, Germany, assignor to the firm Minimax A.-G., Berlin, Germany

Application September 24, 1934, Serial No. 745,371

In Germany June 6, 1931

3 Claims. (Cl. 169—2)

1. In an apparatus for blowing fire-extinguishing gas into material in a finely divided state, a container for said material, a feed pipe for the gas extending into said container in position to be covered by said material, and a porous envelope surrounding the discharge end of said feed pipe for obtaining a distribution of the extinguishing gas at low speed to prevent any turbulent action of the finely divided material and consequent explosions.

2,006,259

ZINC SULPHIDE AND PROCESS OF MAKING THE SAME

John Henry Calbeck, Joplin, Mo., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a corporation of Maine

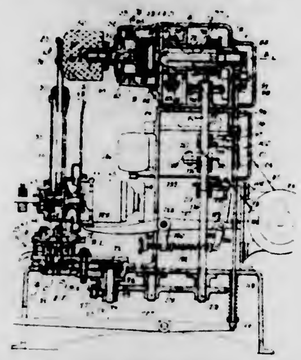
No Drawing. Application September 6, 1933, Serial No. 688,413

26 Claims. (Cl. 134—78)

1. The process of precipitating a basic zinc sulphide, comprising treating a zinc sulphate solution with a water soluble thiosulphate and adding a base at a rate equivalent to the rate of reaction between the zinc and thiosulphate.

23. As a new article of manufacture, a precipitated zinc sulphide pigment consisting mainly of individual crystals of substantially uniform size and shape as precipitated and characterized by having the color strength, combined with whiteness and brightness, comparable to titanium dioxide.

2,006,260



HAT WORKING MACHINE

Marcel Cassé, Essonnes, France

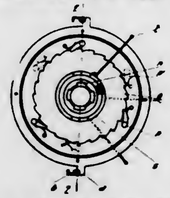
Application October 12, 1931, Serial No. 568,463

In France December 24, 1930

22 Claims. (Cl. 223—30)

1. A hat working mechanism of the type described comprising in combination, a cinematic mechanism including a rigid member, two parallel spindles journalled in said member, a third spindle parallel to the two above mentioned spindles, located in the same plane as said spindles and also journalled in said member, transmission means for connecting the two first mentioned spindles to one another, whereby they are caused to rotate one with respect to the other at respective speeds of revolution whose ratio is equal to the reciprocal of the ratio of the respective distances from said two spindles to the third mentioned spindle, said speeds of revolution and said distances being counted algebraically, a fourth spindle rigidly connected to one of the two first mentioned spindles and parallel thereto, a rigid member to which the fourth spindle is journalled, said last mentioned rigid member being adapted both to slide and rotate with respect to the third mentioned spindle, a tool supported by said last mentioned rigid member so as to move along a hypocycloid corresponding substantially to a section of the hat by a plane at right angles to its base, a second cinematic mechanism of the same type, a block for supporting the hat adapted to be actuated by the last mentioned mechanism, and means for connecting said two mechanisms to one another adapted to maintain the tool in a tangential position with respect to the piece of work.

2,006,261



RATCHET DEVICE FOR PREVENTING THE REARWARD MOTION OF POWER DRIVEN VEHICLES

Atille Catella, Paris, France

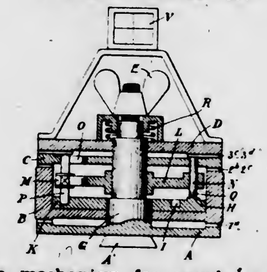
Application September 10, 1931, Serial No. 562,175

In France September 12, 1930

2 Claims. (Cl. 188—81)

1. A device of the character described comprising a driving shaft, a pair of ratchets loosely carried by said shaft and each disposed in reverse relation to the other, pawls positioned for cooperative engagement with said ratchets, and clutch means operable to connect either of said ratchets to the shaft.

2,006,262

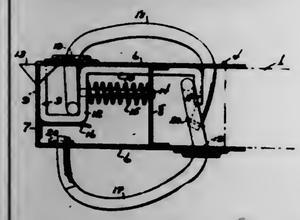


MECHANISM FOR ANGULAR ADJUSTMENT OF GUN SIGHTS

Gustave Charvet, Paris, France, assignor, by mesne assignments, to Anciens Etablissements Barbier, Benard & Turenne, Paris, France, a French company

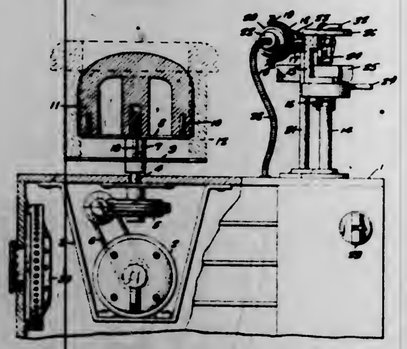
Application July 13, 1931, Serial No. 550,598

In France July 21, 1930



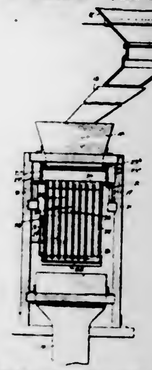
3 Claims. (Cl. 33—59)

1. In a mechanism for angular adjustment, more particularly adapted for goniometric sighting instruments for firearms, the combination of a stationary member, a movable member provided with a slot, and an intermediate member, said members being provided with coupling teeth for selective interconnection with one another, the number of teeth in one tooth coupling differing from the number of teeth in the other tooth coupling, a cam operatively connected with said intermediate member, a guiding member fixed with respect to said stationary member, and a stop member engaging said cam, said guiding member and said slot in said movable member, said guiding member and said slot having such an inclination with relation to each other that when said intermediate member is advanced with reference to the stationary member by one tooth of the coupling between the stationary member and the intermediate member, said intermediate



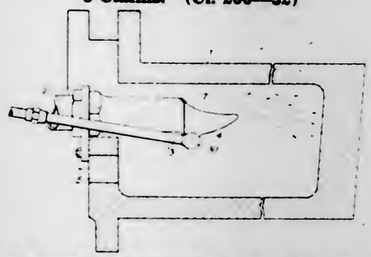
member will also be advanced with reference to said movable member by one tooth of the coupling between said intermediate and said movable members.

2,006,263
DOORLOCK
Bernard J. Cosmos, Bristol, Ill.
Application May 1, 1934, Serial No. 723,391
2 Claims. (Cl. 292—173)



1. A latch comprising a casing, a spring pressed latch bolt slidable in said casing, said casing having pairs of openings in opposite walls thereof, substantially U-shaped handles extending through the openings, means pivoting the handles to the casing adjacent one end of said handle, pins carried by the other ends of the handles for limiting the sliding movement of the handles relative to the casing in one direction, offset portions on the latch bolt, said pivoted end of the handles engaging the offset portions whereby a push on one handle will retract the latch bolt or a pull on the other handle will retract the latch bolt.

2,006,264
HAT IRONING MACHINE
Hari Couyoumjian, Detroit, Mich.
Application July 11, 1933, Serial No. 679,943
5 Claims. (Cl. 223—28)

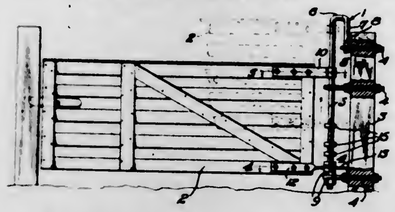


1. A hat ironing machine comprising a main support, power driven means for rotatably supporting hat forms to the main support, a standard rising from the main support, a bracket rotatably secured to the standard, a rod slidably secured to the bracket and extending horizontally therefrom over the main support, a hollow lever pivotally and slidably connected adjacent one end to said rod, a hand grip for said lever, and an electric iron pivoted to the other end of the lever.

2,006,265
METHOD OF AND APPARATUS FOR TREATING GRAIN FOR EXTERMINATION OF INSECT LIFE THEREIN
Jesse H. Davis, Baltimore, Md.
Application April 29, 1933, Serial No. 668,311
21 Claims. (Cl. 175—311)

1. In an apparatus for transporting and treating grain, means for conducting a stream of grain to be transferred from one point to another, an exterminator in the line of feed presenting a plurality of parallel electrodes providing grain flow passages operative to divide the grain into a plurality of smaller streams and forming correspondingly shaped high frequency oscillation fields, and a high frequency oscillation generator including said electrodes for generating and passing high frequency oscillations through said fields.

2,006,266
PROCESS FOR COOLING FURNACES BY MEANS OF COOLING CHAMBERS
Gustav Dörrenhaus and Simon Walter, Mulheim-Ruhr, Germany, assignors to the firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany
Application June 9, 1934, Serial No. 729,862
In Germany June 23, 1933
8 Claims. (Cl. 266—32)



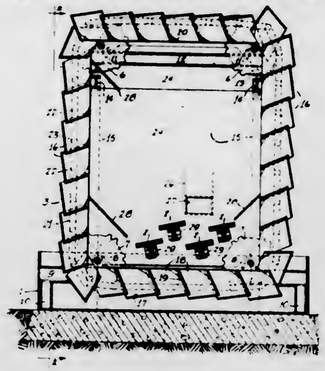
1. A process for cooling furnaces by means of cooling chambers, in which the cooling agent is sprayed in atomized condition against the cooling surfaces of the cooling chamber by means of compressed air.

3. A process for cooling furnaces by means of cooling chambers in which a cooling stream is introduced into the chamber and a stream of air is caused to act upon said cooling stream under a pressure of about 0.1–0.2 atm. so that the cooling agent is atomized and sprayed against the cooling surfaces of the cooling chamber.

CARNEGIE LIBRARY OF ATLANTA

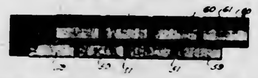
2,006,267
GATE HINGE
Cyrus Feltz, Swaysee, Ind.
Application May 1, 1934, Serial No. 723,403
2 Claims. (Cl. 16—132)

1. A hinge comprising a vertically arranged rod, eye bolts receiving said rod and adapted to be secured to a supporting post, said rod having its upper end bent angularly and downwardly to form a stop and a shank, an eye bolt connecting the shank to the supporting post, a lug on the shank and adapted to abut the post, strap members rotatably and slidably mounted on the rod and adapted to be secured to a gate and capable of moving horizontally for a limited distance with respect to the rod, one of said strap members having a key hole slot to receive the rod, and means adjustably secured to the rod to act as supporting bearings for the last-named strap member and capable of passing through the keyhole slot thereof when the gate is placed in an inclined position with respect to the supporting post.



2,006,268
FASTENER FOR BAGS
Ludwig Thomas Geiger and Richard Geiger, Vienna, Austria
Application October 16, 1933, Serial No. 693,879
In Austria January 12, 1933
2 Claims. (Cl. 292—207)

1. In a fastener for bags of the type in which a slide adapted to move in sliding engagement with and longitudinally of one hinged frame member is capable of being brought selectively into and out of the range of a clasp member pertaining to the other hinged frame member, a slide adapted to move, in the plane of the said first hinged frame member, not only longitudinally of the said frame member but also at the same time in a direction substantially at right angles thereto, an inclined guide track for the said slide disposed in the said plane, and a clasp member of uniform and unvaried shape throughout adapted to be liberated for the opening of the fastener by the movement of the said slide clear of the upper edge thereof.

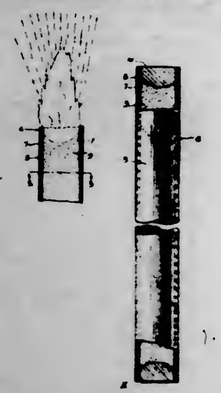


2,006,269
ORE REDUCING MACHINE
Alvah D. Hadsel, Oakland, Calif.
Application February 7, 1933, Serial No. 655,647
5 Claims. (Cl. 83—46)

1. In an ore reducing machine, a tank for holding water, a breaker plate supported above the water and at a slight angle to the surface thereof, means for dropping ore on the breaker plate from a height sufficient to insure chipping of the ore whereby the ore is made to drop from the breaker plate in comminuted form and the finer particles of ore are made to float on the

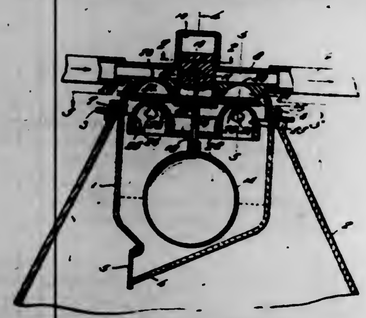
water while the coarser particles descend, the ore dropping means including means for catching the coarser particles below the surface of the water and for relifting the same for further dropping and having spaced openings for allowing the tank water to rush therethrough for washing out the fines.

2,006,270
ROOFING AND SIDING ELEMENT
Norman P. Harshberger, Scarsdale, N. Y., assignor to Bakelite Building Products Co., Inc., New York, N. Y., a corporation of Delaware
Application September 24, 1930, Serial No. 484,079
13 Claims. (Cl. 108—7)



1. Building material comprising an elongated body portion forming a base, tabs foldable toward one another from opposite longitudinal edges of said base to a superimposed position thereon wherein the lines of fold are in line with the upper and lower edges of the finished product, said tabs being separated by intervening transverse spaces which form spaced apart depressions defining a plurality of raised figures formed by the superimposed tabs, and said superimposed tabs on the two edges terminating short of meeting to provide a depressed longitudinal definition line for cooperation with the transverse depressions in setting off the figures formed.

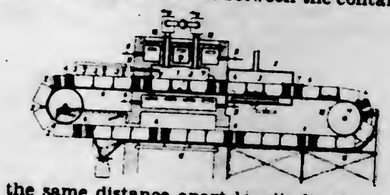
2,006,271
PYROTECHNIC DISPLAY
Ray C. Hitt, Seattle, Wash.
Application October 13, 1931, Serial No. 568,595
2 Claims. (Cl. 102—20)



1. A pyrotechnic display comprising a thin casing treated with a slow burning material, a fireworks composition containing spark producing metallic particles in said casing, said casing and fireworks composition adapted to be ignited at one end of said casing, the casing being of slower burning material than said composition, a chimney formed by said slow burning casing, said chimney confining for a short dura-

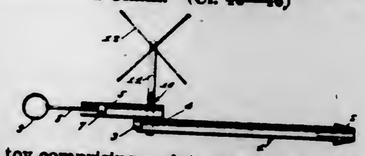
tion gases formed from the burning composition, said gases forcing the flames from the burning

composition out of said casing to give a sparkler effect.



2,006,272
MILKING-MACHINE ATTACHMENT
Ralph Walter Hurlburt, Sheffield, Mass.
Application June 21, 1932, Serial No. 618,940
4 Claims. (Cl. 31—58)

1. The combination with a milking machine including a suction line for drawing milk from a cow, of means interposed in said suction line for diverting a quantity of the milk, said means including a container communicating with the suction line for receiving the milk therefrom, interconnected valves controlling the suction line and the communication between said suction line and the container, and common means for actuating the valves.



2,006,273
APPARATUS FOR THE DISTILLATION OF OIL
Alfred Knudsen, Astra (Chubut), Argentina
Application September 12, 1933, Serial No. 689,189. In Germany September 22, 1932
9 Claims. (Cl. 202—117)

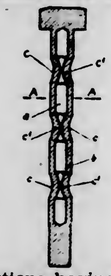
1. In apparatus for the distillation of oil material to coke, a distillation chamber having means for heating it on all sides and provided on opposite sides respectively with two openings having frames fixing them, a chain of distillation containers mounted to travel through said openings and the distillation chamber, and resilient sealing members adapted to close the two openings and arranged in the chain between the containers

at the same distance apart longitudinally of the chain as the distance between said openings.

2,006,274
TOY
John Kushner, Farrell, Pa.
Application April 3, 1934, Serial No. 718,849
1 Claim. (Cl. 46—46)

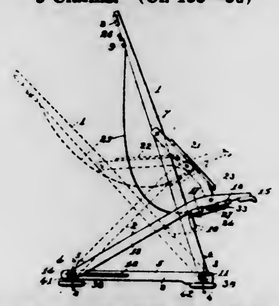
A toy comprising a plate provided adjacent one end with closely related openings, a mouth tube frictionally engaging the walls of one of said openings and provided adjacent the plate with an air port, a cylinder frictionally engaging the walls of the other opening and having one end located close to the air port and paralleling the tube, said plate having a bifurcated portion to form spaced arms extending from the cylinder, a paddle wheel journaled to said arms and located in the path of the air passing from the end of the cylinder from the air port, and a manually actuated plunger slidable in the cylinder.

2,006,275
KNITTED YARN AND FABRIC MADE THEREFROM
Franz Meiwald, Vienna, Austria
Application May 21, 1932, Serial No. 612,687
In Austria October 15, 1931
7 Claims. (Cl. 66—169)



1. A yarn composed of a plurality of threads knitted into a plurality of individual courses of loops spaced in the direction of the courses with floats between the adjacent loops, the loops of each successive course extending part-way into the spaces between the adjacent loops of the next preceding course, and crossing with their floats the loops of said preceding course, whereby the bight ends of the loops of adjacent courses form a zigzag line, the general direction of which line follows the direction of said adjacent courses.

2,006,276
SAFETY BOLT
Victor Nodière, Saint-Etienne, France
Application November 27, 1933, Serial No. 699,992
In Germany December 2, 1932
2 Claims. (Cl. 85—1)



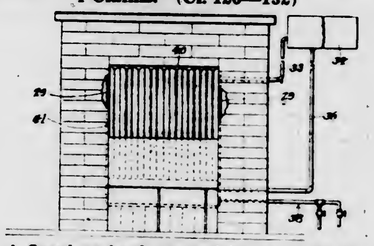
1. A resilient threaded bolt which will retain its nut under vibration having a threaded portion and a shank, said shank being provided with a central bore, said shank being

further provided with spaced depressed ring portions having sharply curvilinear cross-sectional boundaries in the general direction of the axis of said bolt, the centers of curvature of said curvilinear boundaries being outside said

bolt, said ring portions having a wall of thickness which increases from a minimum value at the point of maximum diameter of said ring portion to a maximum value at the point of minimum diameter of said ring portion.

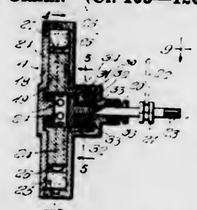
2,006,277
FOLDING ROCKING CHAIR
Olaf J. Olsen, Miami, Fla.
Application June 24, 1929, Serial No. 373,380
5 Claims. (Cl. 155—56)

2. In a chair of the class described a base comprising a pair of straight parallel bars extending from front to rear, the rear portions of said bars being formed with longitudinally extending slots, a back frame pivotally connected to the forward ends of said base bars to oscillate thereon and a seat frame having pivot pins pivotally and slidably mounted in said slots, said seat frame being adapted to oscillate on said pins, and supporting blocks connected under the front and rear ends of the base bars respectively, the blocks at the rear ends being pivotally supported with respect to the base bars, as and for the purpose described.



2,006,278
RIMLESS ENDPIECE MOUNTING
Emanuel Pappert, Long Island City, N. Y., assignor to George P. Kimmel, Washington, D. C.
Application April 22, 1933, Serial No. 667,454
16 Claims. (Cl. 88—53)

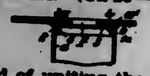
1. An endpiece for rimless spectacles of the type having the lenses formed with straight, horizontal top edges comprising a horizontally disposed arm, said arm being formed with a channel for receiving the outer end part of the top edge of and for overlapping a lens in proximity to said edge whereby said top edge is arranged in parallelism to said arm, said channel opening at the inner end of said arm, and said arm being formed with spaced depending apertured ears opposing opposite faces of the lens and being adapted for the passage of holdfast means in proximity to the top edge of the lens for anchoring the latter



and arm together, said arm having a portion thereof for projecting outwardly beyond the outer end of said edge, said arm having its outer end formed as a hinge connection for the forward end of a temple, and said ears having the apertures thereof positioned outwardly with respect to the inner end of said arm.

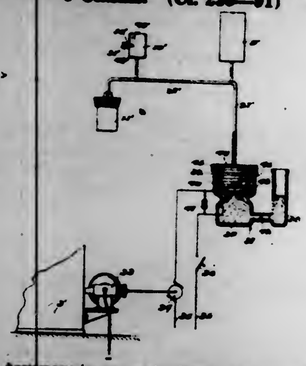
2,006,279
COMBINED FIREPLACE BACK AND WATER HEATER STRUCTURE
Charles Walter Perry, Dothan, Ala.
Application June 5, 1934, Serial No. 729,145
4 Claims. (Cl. 126—132)

1. A fireplace back comprising a vertically disposed hollow casting forming a water chamber; the upper portion of said chamber being of greater volume than its lower portion, the upper portion of the front of said casting being projected forwardly with respect to the lower portion of its front, and said casting being formed therein with upstanding spaced apertured webs extending from a point removed from the lower end thereof to its upper end, said webs being integral with the inner faces of the front, rear and top of the casting.



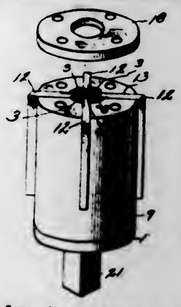
2,006,280
PUMP FOR HYDRAULIC DRIVES
Theodore J. Schlueter, New Orleans, La.
Application March 23, 1933, Serial No. 662,402
1 Claim. (Cl. 103—120)

A hydraulic drive comprising a casing having inlets and outlet ports communicating with the interior thereof, means for forcing liquids through the ports and casing, means for reversing the flow of the liquid through the ports and casing,



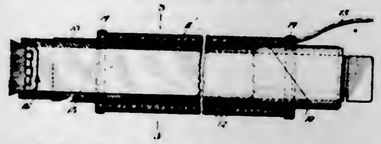
said casing having a hood at the center of its side wall, a disk slidable in the hood and adapted to enter the casing, a rotor journalled in the casing and having spring supported peripheral vanes engaging the inner surface of the casing, said rotor having at its side, a central cavity adapted to receive said disk snugly and fitting in said hood, said rotor having radial disposed passages located between said vanes and communicating at their inner ends with said cavity and at their outer ends with the interior of the casing, means for sliding the disk and means carried by the disk and housed in the hood for locking the disk to the wall of the cavity when the disk is moved to a position closing the inner ends of the passages; said last named means being further adapted for unlocking the disk from the wall of the cavity when the disk is moved to a position where the inner ends of the passages are opened.

2,006,281
METHOD OF MANUFACTURING BOBBINS, PARTICULARLY FILM BOBBINS
Philipp Schwarz, Wuppertal-Barmen, Germany
Application November 28, 1933, Serial No. 644,358
In Germany December 1, 1931
10 Claims. (Cl. 29—170)



1. The method of uniting the flange ends and tubular bodies of bobbins which consists in bending a flange end to form an annular channel, inserting an end of the tubular body in said channel, and closing the channel on the inserted end and crimping the tube inwardly at the mouth of the channel to form a seat for the material at one side of the channel whereby to form a reverse bend at the end of the tubular body.

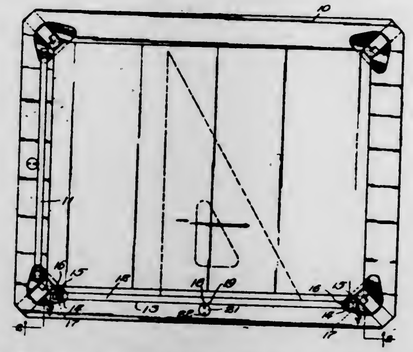
2,006,282
TEMPERATURE CONTROL SYSTEM
Edwin F. Smith, Prospect Park, Pa., assignor to The Fulton Sylphon Company, Knoxville, Tenn., a corporation of Delaware
Application December 6, 1930, Serial No. 500,607
9 Claims. (Cl. 236—91)



1. A temperature controlling system of the type adapted for use with a heating plant for enclosures employing a fluid heating medium comprising a container exposed to the temperature without the enclosure to be heated, a second container exposed to the temperature within the enclosure, a third container exposed to the temperature of the heating medium, an expansible fluid within said containers, a pressure responsive device, means connecting the enterior of each of said containers to the interior of said pressure responsive device and directly subjecting the latter to the pressure of said expansible fluid thereby forming a closed thermo-sensitive system with said containers connected in parallel with one another, and means operated by said pressure responsive device for varying the heating effect of said heating plant.

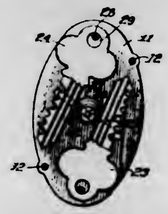
2,006,283
MACHINE FOR MAKING BOILER CLEANER NOZZLES
Joseph Staempfli, New Orleans, La.
Application July 19, 1934, Serial No. 736,074
7 Claims. (Cl. 153—48)

1. A tool for forming nozzles having vanes on a tubular member with alternate edges of the vanes bent inwardly towards the axis of the nozzle and with the other alternate edges of said vanes in concentric relation with the nozzle, said tool comprising a body member, a channeled mandrel within the body member and adapted to receive the nozzle and bending plates slidably mounted in the body member and positioned whereby when forced inwardly the alternate edges of the nozzle vanes will be engaged thereby and be forced inwardly towards the channels of the mandrel.



2,006,284
HAIR STRAIGHTENING DEVICE
Arthur L. Thomas, Trenton, and Lily D. Ellis, Princeton, N. J.
Original application September 23, 1933, Serial No. 690,714. Divided and this application September 17, 1934, Serial No. 744,402
3 Claims. (Cl. 132—36)

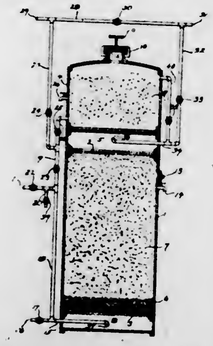
1. A hair straightening device comprising a tubular oven, heating means surrounding said oven, and a flat bar adapted to extend through said oven, said bar having provision for securing the scalp ends of the hair thereto while the hair is laid lengthwise of the bar.



2,006,285
STRAIGHT-EDGE
Max Kurt von Zimmermann, Elkhart, Ind.
Application March 24, 1934, Serial No. 717,246
5 Claims. (Cl. 33—76)

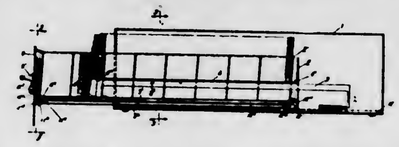
1. A board of the character described, having in combination: a groove in said board; a straight-edge adapted to lie in said groove; diagonally sloping slots in said straight edge; and members on said board adapted to be engaged

by said slots, whereby longitudinal movement of said straight-edge effects a change in the vertical level thereof.



2,006,286
KEY-CONTAINER
Arthur Waller, Chicago, Ill.
Application January 26, 1934, Serial No. 708,485
5 Claims. (Cl. 59—96)

1. A key-container comprising a pair of body members connected in spaced relation to form a housing, means for pivotally fastening a key within said housing, an ejector slidably mounted within a slot provided in one of said body members, said slot being disposed so as to guide said ejector selectively into engagement with either of two keys to swing the key from the housing, and a collar mounted upon said ejector with a lost-motion connection and adapted to engage said keys.

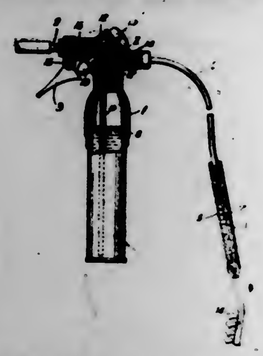


2,006,287
WATER SOFTENER
Allen M. Wilbanks, Amarillo, Tex., Ophelia Wilbanks executrix of will of said Allen M. Wilbanks, deceased
Application November 14, 1932, Serial No. 642,612
4 Claims. (Cl. 210—24)

1. Water-softening apparatus comprising a fluid-tight container of water-softening material, a fluid-tight tank of regenerating material, a valve-controlled supply-pipe connectible with a main, a valve-controlled pipe-line extending from said supply-pipe to the bottom part of said container, a valve-controlled discharge-exit in said pipe-line between the valve thereof and said container, a valve-controlled delivery-pipe extending from the upper portion of said container, a valve-controlled pipe in communication with said supply-pipe beyond its valve and with the lower part of said tank, and a valve-controlled

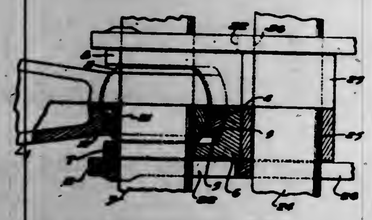
pipe extending from the upper part of said tank and connected with said delivery-pipe at a place between its inner end and its valve.

2,006,288
VERTICAL CARD INDEX CABINET
Birger Aagaard, Trondhjem, Norway
Application August 5, 1933, Serial No. 683,885
5 Claims. (Cl. 129—16)



1. A vertical index cabinet embodying, in combination, a stationary casing, a drawer slidable with said casing, a card-dropping element mounted in said casing, extending through the bottom of said drawer above the plane thereof and having a substantially horizontal card-supporting surface disposed in an elevated position, and a card dropping edge extending downwardly at substantially right angles to said elevated card-supporting surface, index cards mounted within said drawer, mechanism for raising and lowering the bottom of said cards above and below the top of said dropping element, and mechanical means for controlling the horizontal sliding movement of said drawer within the casing.

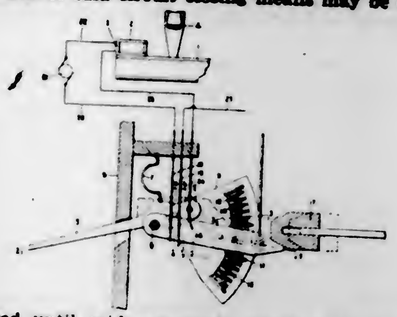
2,006,289
TEETH-CLEANSING APPLIANCE
Hans Andvig, Oslo, Norway
Application October 7, 1932, Serial No. 636,750
In Norway October 13, 1931
1 Claim. (Cl. 15—128)



A tooth cleaning appliance, comprising an atomizer containing a liquid dentifrice, a conduit through which carbon dioxide passes under pressure, means for controlling the amount of carbon dioxide flowing, a mixing valve by means of which the carbon dioxide draws with it and atomizes in finely divided particles a certain quantity of the dentifrice, a mouth piece shaped as a tooth brush and having a passage for conveying the stream of atomized dentifrice and carbon dioxide to an opening on the surface of the brush head and

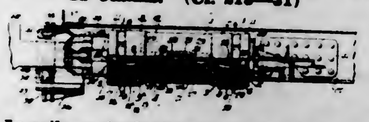
a chamber in the handle of said mouth piece and through which passes said atomized dentifrice

and carbon dioxide, the said chamber containing a solid but soluble disinfecting material.



2,006,290
DRAFT RIGGING
Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a corporation of Maryland
Application October 2, 1929, Serial No. 396,758
15 Claims. (Cl. 213—69)

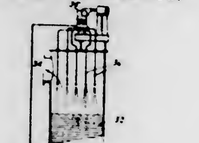
13. A car coupler involving a shank member having a rear end wall and a transversely extending slot in advance thereof, said rear wall having curved rear and forward surfaces, a bearing block having a curved forward face cooperating with said curved rear surface, and a key seat member positioned in said slot and having a curved rear face cooperating with said curved forward surface of said rear wall, the bearing block being provided with forwardly extending arms embracing said shank member and key seat member and serving to connect said block to said key seat member.



2,006,291
REGISTRATION CONTROL FOR PIPE ORGANS
Donald S. Barrows, Rochester, N. Y.
Refiled for abandoned application Serial No. 666,710, September 15, 1923. This application January 26, 1928, Serial No. 250,519
10 Claims. (Cl. 84—345)

1. In an organ, in combination with stop actions, stop keys normally indicating by their positions whether such stop actions are on or off, each key carrying means for closing an electric circuit, pneumatic control means operated by said circuit for effecting desired movement of said stop actions, and means for rendering said pneumatic means ineffective, whereby the action of said circuit closing means may be de-

layed until said pneumatic means is rendered effective.



2,006,292
DRAFT RIGGING
Donald S. Barrows, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a corporation of Maryland
Application February 14, 1933, Serial No. 656,722
11 Claims. (Cl. 213—31)

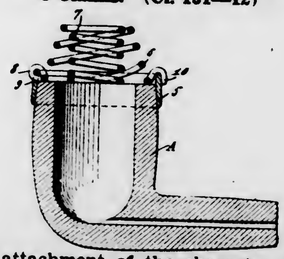
1. In railway draft rigging, in combination with draft sills, a backstop connecting said sills, a coupler, and yoke-acting means normally engaging said backstop so as to be stationary on buff, a friction draft gear comprising a housing with cushioning mechanism at each end, said yoke-acting means embracing said housing and cushioning mechanism to actuate the rear mechanism on draft, said coupler, yoke-acting means, housing and sills being formed with slots, a housing key passing through said slots in said housing, yoke-acting means and sills and another key passing through corresponding slots in said coupler, yoke-acting means and sills, said sill slots being elongated rearwardly of the normal position of the housing key to permit rearward movement of the housing on buff, while holding it stationary on draft, whereby the cushioning mechanisms at both ends are operated on buff but only that at the rear end on draft, said yoke-acting means being continued forwardly at the sides of the coupler and connected at its front end by an integral portion functioning as a striking casting, and a coupler carrier resting on portions of said yoke-acting means beneath said striking casting portion for supporting said coupler.

2,006,293
HANDLE FOR CANS
Lloyd L. Bassett, Los Angeles, Calif.
Application August 23, 1934, Serial No. 741,171
4 Claims. (Cl. 220—94)

1. In combination with a can, a handle member of flexible material having one of its ends secured to the lower portion of the can, and its other end slidably mounted on the top of the can, means secured to the can top to guide the slidable end of the handle, the can top adapted to have openings punched therein to dispense the contents of the can and to vent it, the slidable end of the handle closing said openings in one position and exposing the dispensing opening in a second position, and the slidable end of the handle

provided with an opening alining with the vent opening in said second position.

2,006,294
DRAG CONVEYER CHANNEL
Bruce Beardsley, Brooklyn, and Alexander Plausics, New York, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application January 21, 1932, Serial No. 588,012
12 Claims. (Cl. 198—160)



1. In a drag-conveyer for sheet material, the combination of a conveyer guideway, a belt arranged to travel along the face of the guideway for conveying sheets of material between it and the guideway, said guideway having a greater width than the belt and a less width than the sheets, said guideway being provided along its outer edges beyond the edges of the belt with longitudinally extending members protruding above the face thereof for holding the edge portions of the sheets out of contact with the said face.

2,006,295
APPARATUS FOR THE SCRUBBING OF GAS
Walter L. Chewning, Cynwyd, Pa., assignor to United Engineers & Constructors Inc., Philadelphia, Pa., a corporation of Delaware
Application June 19, 1931, Serial No. 545,469
4 Claims. (Cl. 261—98)

1. Apparatus for scrubbing gas with a liquid including a scrubber having gas inlet and outlet means therein, a plurality of liquid supply means, a plurality of rotatable liquid inlet means to said scrubber receiving liquid from said supply means, means in each of said supply means for controlling the flow of liquid therethrough, and means for intermittently opening and closing said means for controlling the flow of liquid through the supply means.

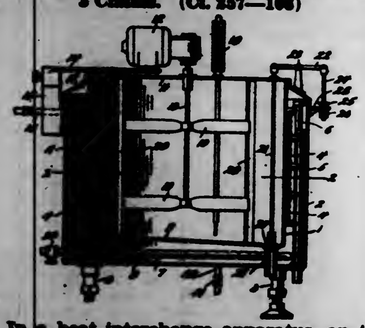
2,006,296
SMOKING PIPE ATTACHMENT
Augustus Christensen, Hellertown, Pa.
Application August 21, 1934, Serial No. 740,832
3 Claims. (Cl. 131—12)

1. An attachment of the character described comprising an outer resilient helix, an inner resilient helix located centrally of and depending within the outer helix, and means for hinging the outer helix to the mouth of a bowl of a smoking pipe.

2,006,297
FILM FEEDING MECHANISM FOR CINEMATOGRAPH APPARATUS
Ernst Eisemann, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany
Application October 28, 1933, Serial No. 695,710
In Germany November 8, 1932
10 Claims. (Cl. 88—18.2)

1. A film feeding mechanism for cinematograph films comprising a film feed roller, a stationary central supporting shaft for same, a peripheral series of apertures in said roller, a feed lever, a sliding connection between said feed lever and said stationary shaft to permit rotary and radial movement of said lever, a feed pin on the end of said feed lever for engaging the said apertures, means for intermittently oscillating said feed lever about said stationary shaft and means for intermittently reciprocating said feed lever radially of said stationary shaft to bring the feed pin into and out of engagement with said apertures, the said means for oscillating said feed lever being so connected with the means for reciprocating said lever that a radial movement of the lever in one direction always follows an oscillatory movement in one sense and a radial movement in the other direction always follows an oscillatory movement in the other sense.

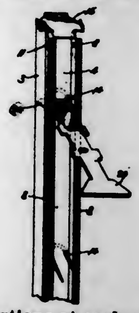
2,006,298
ROTARY PUMP, COMPRESSOR, ENGINE, AND THE LIKE
Miller R. Hutchison, Jr., Madison, N. J., assignor to Multicycol Pump & Engine Corporation, New York, N. Y., a corporation of New York
Application April 21, 1933, Serial No. 667,140
11 Claims. (Cl. 103—124)



1. A machine of the character disclosed, comprising a lobed impeller, hollow faced rockers having their opposite sides in sealing engagement with said lobed impeller and provided with passages through from back to front of the same, a

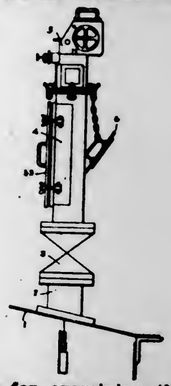
housing enclosing said impeller and rockers and providing with the impeller and rockers a variable displacement chamber for each rocker and variable displacement chambers between the rockers, said housing having admission and ex-

haust valve ports at opposite sides of the rockers and valving elements on the rockers and cooperatively related to said ports to alternately place the same in communication with the rocker chambers and with said chambers between the rockers.



2,006,299
HEAT INTERCHANGE APPARATUS
Robert E. Kaestner, Baltimore, Md., assignor to E. A. Kaestner Company, a corporation of Maryland
Application July 30, 1934, Serial No. 737,658
3 Claims. (Cl. 257—106)

2. In a heat-interchange apparatus, an inner vessel, an outer vessel surrounding said inner vessel in spaced relation both laterally and at the bottom to said inner vessel and forming a tight jacket for said inner vessel, a plurality of hollow coils including coils having a plurality of convolutions, a manifold disposed between said vessels and in spaced relation to said inner vessel for supplying heat-exchange fluid to said coils, a manifold disposed between said vessels and in spaced relation to said inner vessel for receiving the fluid after passage through said coils, a perforated steam pipe extending into the space between said vessels, the convolutions of said coils being in direct contact with each other and with said inner vessel, means comprising heat-conducting material in the interstices between the adjacent convolutions of said coils and said inner vessel said forming a direct and voidless heat-transfer structure between the contents of said coils and the contents of said inner vessel, and agitation means within said inner vessel.

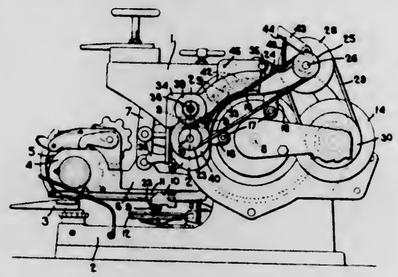


2,006,300
ANCHOR INSERT
Arthur M. Kinsinger, Dayton, Ohio, assignor of one-half to Carl A. Kinsinger, Dayton, Ohio
Application February 6, 1933, Serial No. 591,348
13 Claims. (Cl. 72—101)

13. A slot-forming unit for a concrete form including a channel-shaped body of sheet material having inwardly directed side walls, adapted to be embedded in a body of concrete with its open side exposed in the face of the concrete body, and a reversible anchor tie including similarly

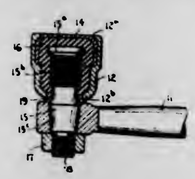
enlarged head portions at each end of the tie engageable within the channel-shaped body, whereby either end of the anchor tie may be engaged with the channel.

2,006,301
APPARATUS FOR EXAMINING THE CONTENTS OF TANKS
Martinus Adrianus Meyer, The Hague, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application May 22, 1933, Serial No. 672,148
In Germany July 22, 1932
2 Claims. (Cl. 137—18)



1. Apparatus for examining the contents of tanks, comprising a cut-off valve attached to the top of the tank, a hollow head adapted to be attached to the upper side of said cut-off valve, two drums mounted in said head independently rotatable, cables attached to said drums, a transparent cylindrical sample can having end plates, connected valves arranged in the end plates of said sample can, two sets of levers on one of said end plates for operating said valves, each set of said levers being attached to one of said cables.

2,006,302
MARKING MACHINE
Charles F. Robbins, Keene, N. H., assignor to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application November 28, 1933, Serial No. 700,063
5 Claims. (Cl. 101—348)

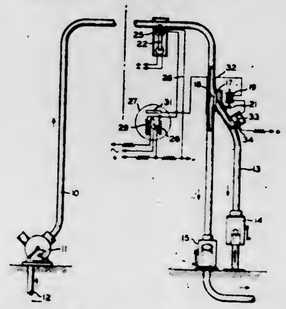


1. An ink roll conditioning attachment for printing machines comprising a fixed support-

ing member, a conditioning roll rotatably mounted therein, said supporting member having means for supporting an ink roll of a printing machine in a position resting on the conditioning roll, said means permitting ready removal and replacement of the ink roll, a second conditioning roll, and means supporting the same in position to

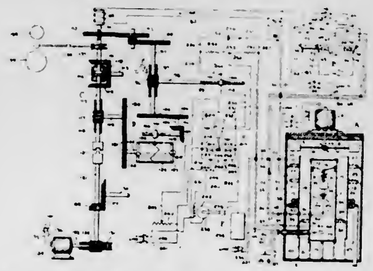
rest on the ink roll, said means providing for separation of the second conditioning roll from the ink roll to permit the latter to be removed from the supporting member or to be replaced therein, means for rotating one of the conditioning rolls, and means for reciprocating the other conditioning roll in the direction of the length of the ink roll.

2,006,303
FLEXIBLE CONNECTION
Curt Saurer, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a corporation of Ohio
Application February 12, 1932, Serial No. 592,555
6 Claims. (Cl. 287—85)



5. In a flexible connection, the combination of a tubular socket, a generally cylindrical rubber structure, a metal cap vulcanized on one end of the latter, and a threaded stud mounted axially of the rubber structure and vulcanized therein with the threaded portion disposed exteriorly thereof, the metal cap having a force fit in the socket, and the rubber structure being mounted in the socket and compressed so as frictionally to engage the wall thereof.

2,006,304
ALLOY STEEL
Jerome Strauss, Pittsburgh, Pa., assignor, by mesne assignments, to U. S. Rustless Steel & Iron Corporation, Bridgeville, Pa., a corporation of Delaware
No Drawing. Application April 13, 1935, Serial No. 16,255. In Great Britain June 16, 1934
5 Claims. (Cl. 75—1)



1. An alloy steel containing .01% to .60% carbon, .3% to less than 2% chromium, .15% to 3% copper, .25% to 3% silicon, .07% to .75% phosphorus, .02% to .50% manganese, and not over .10% sulphur, the balance being substantially all iron.

2,006,305
CARRIER DISPATCH SYSTEM
Harold F. Wilder, Chatham, N. J., and Hakon H. Haglund, New York, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Application January 8, 1932, Serial No. 585,556
30 Claims. (Cl. 243—16)

1. A conveyor, a switching mechanism for said conveyor, a slow acting device for operating said switching mechanism, an electronic device responsive to a condition of short duration produced by articles being conveyed to initiate a discharge therethrough, said latter device being of such a character as to sustain said discharge at a substantially constant value for a sufficient period to operate said slow acting device.

2,006,306
APPARATUS AND METHOD FOR TEMPERATURE REGULATION
Daniel D. Wile, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application May 22, 1930, Serial No. 454,548
35 Claims. (Cl. 236—1)

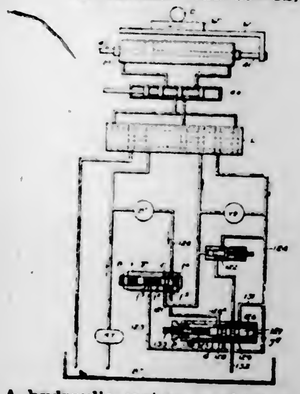
1. An apparatus of the character described, comprising a chamber, regulatable heating means in said chamber, cooling means in said chamber acting to withdraw heat from said chamber simultaneously with the supply of heat to said chamber by said heating means, and means to regulate the heat supplied by said heating means in predetermined relation to the rate at which heat is withdrawn by said cooling means whereby the temperature of said chamber may be accurately controlled.

2,006,207
TIRE BUILDING APPARATUS
Raymond W. Allen, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application December 5, 1932, Serial No. 646,947
12 Claims. (Cl. 18—3)

10. In apparatus of the character described, the combination of a stationary lower head adapted to support a flat band tire by one margin thereof, a housing positioned above said head, a hollow cylinder disposed in axial alignment with said lower head slidably mounted in said housing, an annular upper head on the lower end of said cylinder, means for axially moving said cylinder to cause the head thereon to engage the upper margin of a tire positioned on said lower head, a plunger within said cylinder, a hook on the bottom of said plunger adapted to engage an expansible core, means for moving the plunger longitudinally of said cylinder to draw said core therewith and subsequently to eject it therefrom, means passing through said plunger and connected to the said core to evacuate or inflate the same, and means for passing pressure fluid through said plunger to establish superatmospheric pressure on the inner surface of the tire when engaged by both of said heads.

2,006,208
GRINDING WHEEL
Alonzo Oakleigh Bush and Richard H. Martin, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application July 13, 1933, Serial No. 680,274
17 Claims. (Cl. 51—206)

2. An abrasive article comprising a body of abrasive grains bonded by vitrified ceramic material and an adjacent strengthening body comprising vulcanized hard rubber, which bodies are secured together as an integral unit by a vulcanized rubber bond which fills the pores of the vitrified body and intimately unites with the bond in the rubber bonded body.

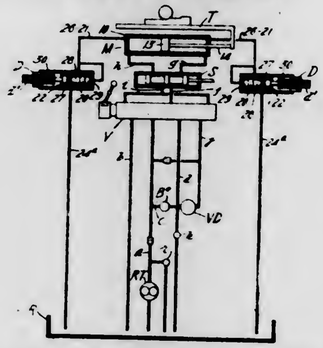


2,006,209
HYDROXY SULPHONATED FATTY ACID ESTERS AND THEIR PRODUCTION
Charles C. Clark, St. Bernard, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application July 6, 1933, Serial No. 679,217
10 Claims. (Cl. 260—106)

1. A new composition of matter consisting of monohydric aliphatic alcohols derived from a soluble salt of 1,2-dihydroxy propane-3-sulphonic acid by esterification of one of its hydroxyl groups with a fatty acid containing at least six carbon atoms.

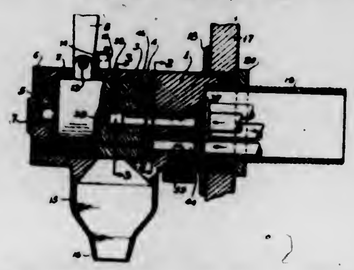
2,006,210
RUBBER COMPOUNDING
Arthur B. Cowdery, Needham, Mass., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application August 20, 1932, Serial No. 629,749
11 Claims. (Cl. 106—23)

1. A compound comprising rubber having incorporated therewith an oil-resin compound comprising about 1 to about 5 parts by weight of heat polymerized cumarone resin, and about 5 to about 1 part by weight of a coal tar oil substantially free from crystalline material at 25° C. and boiling at not less than about 170° C.



2,006,211
LEAKAGE COMPENSATOR FOR HYDRAULIC SYSTEMS
Hans Ernst and Bernard Sassen, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application September 9, 1931, Serial No. 561,900
26 Claims. (Cl. 60—52)

1. A hydraulic system combining a motor; a source of hydraulic fluid supply for said motor; a hydraulic rate control line subject to natural leakage connected with said motor governing the rate of movement thereof; and means providing an artificial leakage to balance the natural leakages of said rate control line.

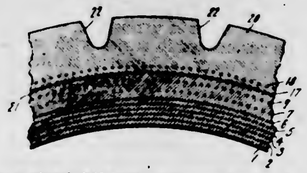


14. An hydraulic power system, said system being subject under varying work resistances to variations in pressures and to corresponding variations in natural leakages; means providing an artificial leakage operative under a selected work resistance to balance the resultant of the natural leakages; and means for automatically varying said artificial leakage to maintain a balance of leakages as the pressures in said system vary under variations in work resistance.

2,006,212
COMPENSATING BLEEDER VALVE
Hans Ernst and Bernard Sassen, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application February 2, 1932, Serial No. 590,336
18 Claims. (Cl. 121—45)

1. An hydraulic propulsion system including a motor and a rate control line therefor; and a combined air bleeder and leakage compensator for said motor comprising a variable opening valve means in liquid communication with said rate control line and adapted to bleed entrained air therefrom and to produce an artificial leakage of liquid substantially equal to but opposite in effect to the normal natural leakage from said line, and means in liquid communication with said rate control line for varying the opening of said valve means in accordance with variations in pressure in said rate control line whereby the artificial leakages from said line are maintained equal to the net natural leakages into said line and a balance is maintained.

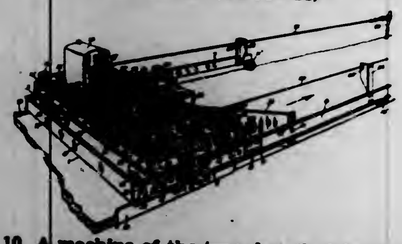
2,006,213
SELF-CARBONATING DISPENSING SYSTEM
Charles A. Geddes, New York, N. Y.
Application September 26, 1933, Serial No. 691,047
6 Claims. (Cl. 225—21)



1. Self-carbonating system for dispensing carbonated drinks comprising a cooler, a displacement vessel, and sources of carbon dioxide gas and water under pressure, and a faucet having a carbonated water discharge and a syrup discharge simultaneously opened and shut by movement of the valve of said faucet, conduits connecting said displacement vessel and said cooler, through said faucet, conduits connecting said carbon dioxide and water under pressure sources to said displacement vessel through said faucet, and a conduit connecting said cooler with said carbon dioxide discharge, through said faucet, the conduit from said carbon dioxide source being in communication with said displacement vessel and the latter with said cooler when said faucet is closed, all other conduits being then occluded, permitting the carbon dioxide to fill that displacement cylinder, driving the displaced and partially carbonated water into said cooler, said conduits being so arranged that when the faucet is opened to discharge syrup and carbonated water, the conduit from the source of water under pressure replaces the conduit from the source of carbon dioxide in communication with said displacement vessel, filling the latter with water and driving the carbon dioxide into the cooler, there completing the carbonation of said water, said cooler being simultaneously placed in communication with said carbon dioxide discharge.

2,006,214
PROCESS OF PREPARING SUBSTITUTED MALONIC ACIDS
Paul Halbig and Felix Kaufler, Munich, Germany, assignors to Dr. Alexander Wacker Gesellschaft für Elektrochemische Industrie, G. m. b. H., Munich, Germany, a corporation
No Drawing. Application May 25, 1933, Serial No. 672,866. In Germany June 8, 1932
14 Claims. (Cl. 260—116)

1. Process of directly preparing alkyl substituted malonic acids from a corresponding water-insoluble compound containing in place of at least one carboxyl group of the substituted malonic acid at least one of the group consisting of $—CH_2OH$ and —CHO, comprising oxidizing said compound with an inorganic acid in the presence of a nitrogen oxide having at least one oxygen atom to one nitrogen atom.



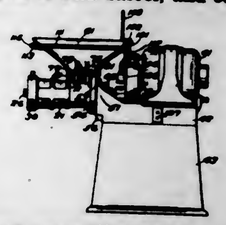
11. Process of preparing diethyl malonic acid comprising treating 2,2-diethyl-propanol-(1)-al-(3) with a mixture of nitric acid, sulphuric acid and nitrogen oxide having at least one oxygen atom to one nitrogen atom in the presence of ammonium vanadate at between 10 and 50° C.

2,006,215
AUTOMOBILE TIRE
Ernest Hopkinson, New York, N. Y., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application June 10, 1932, Serial No. 616,385
7 Claims. (Cl. 152—13)

2. An automobile tire comprising a carcass, protective plies of spaced apart parallel cords disposed externally of the carcass, a rubber tread constituting the outer portion of the tire and extending through the spaces between the cords of said protective plies whereby the latter are embedded in the tread rubber.

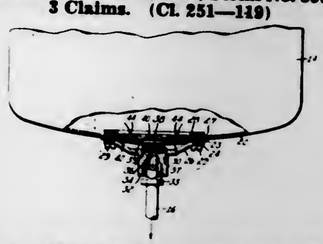
2,006,316
APPARATUS FOR BUILDING ROADS
Obert G. Mandt, Columbus, Ohio, assignor to The Jaeger Machine Company, Columbus, Ohio, a corporation of Ohio
Application May 2, 1932, Serial No. 608,667
21 Claims. (Cl. 94—44)

10. A machine of the type described for forming a monolith or slab from material which is disposed in front thereof, comprising means for propelling said machine through the material, a screw spreading member carried by said machine for spreading the material across the surface to be covered, means for driving said screw spreading member, a strike-off blade carried by said machine, means for vertically adjusting said screw spreading member and said strike-off blade simultaneously, means for vertically adjusting said screw spreading member and said strike-off blade relative to each other, means for guiding the material to said screw spreading member as the machine moves therethrough, side forms carried by said machine for limiting lateral displacement of the material spread by said screw spreading member, said side forms extending a considerable distance ahead of and behind said screw spreading member.



2,006,317
ELECTRIC SWITCH
Friedrich Mensel, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany
Application October 5, 1931, Serial No. 567,079
In Germany October 9, 1930
4 Claims. (Cl. 200—102)

1. A combined electromagnetic cut-out and regulator for the electrical systems of motor vehicles comprising a core of magnetic material, a voltage coil and a current coil connected to the dynamo and coiled about said core, an armature, means for regulating the output of said dynamo upon movement of said armature, a pair of cut-out contacts connected in series with said current coil and the battery, a bimetal spring carrying one of said contacts and a spring of a single material upon which said bimetal spring is mounted.

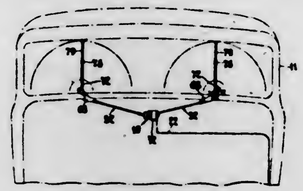


2,006,318
MEAT GRINDING MACHINERY
Oscar C. Schmidt, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a corporation of Ohio
Application October 7, 1933, Serial No. 692,637
5 Claims. (Cl. 146—122)

1. In a meat grinding machine, the combination of a barrel having a feed mouth, a feed-screw in said barrel, an upwardly extending hopper having a feed opening in its lower end registering with said feed mouth, pivot means between the respective sides of said barrel and the respective sides of said hopper respectively provided with releasable pivot pins for respectively disconnecting and connecting said respective pivot means for rocking movements of said hopper toward the respective sides of said barrel, and connected links

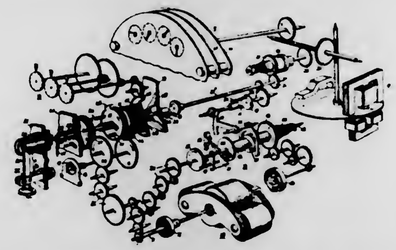
having hinge connections with said barrel and said hopper for limiting opening movements of said hopper in both directions and supporting said hopper in raised relations at both sides of said barrel, said hinge connections with said barrel and said hopper respectively being in a vertical plane substantially coincident with the vertical plane in which the axis of rotation of said feed-screw is located when said hopper is in down position.

2,006,319
DIAPHRAGM VALVE FOR TANK ASSEMBLIES
Henry Hueber, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application March 17, 1932, Serial No. 599,561
3 Claims. (Cl. 251—119)



1. In a reserve tank for providing relatively uniform changes in fluid pressure of a variable fluid pressure system, a casing support pressed out integrally from a wall portion of the tank, a casing secured to said support, an oscillatable valve diaphragm in the casing secured in fluid tight relation between the support and casing, said diaphragm and wall portion having openings offset from each other to provide communication between the tank and the casing, a valve closing seat on said wall portion of the tank within the range of normal operating movement of the diaphragm to close communication between the tank and casing when the diaphragm oscillates in one direction, said openings being disposed on opposite sides of the seat contacting portion of the diaphragm.

2,006,320
MOTOR VEHICLE CONSTRUCTION
Henry Hueber, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application October 10, 1932, Serial No. 637,173
6 Claims. (Cl. 15—255)



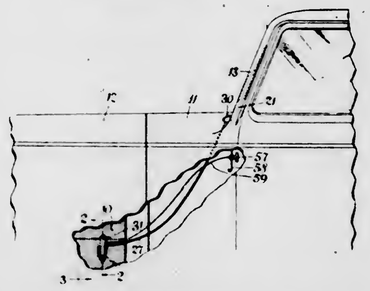
1. In a cowl construction for a motor vehicle having a windshield mounted in conjunction

therewith, an inwardly turned flange on the cowl disposed forwardly of the windshield, supporting means on the forward side of the flange of the cowl, a cleaner motor connected to the support-

ing means, and transmission means extending rearwardly from the motor through the flange and through the cowl to a location adjacent the vehicle windshield for operating a windshield wiper.

2,006,321
DEMAND METER
Julian H. Stark and Harry M. Witherow, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application June 20, 1934, Serial No. 731,573
12 Claims. (Cl. 171—34)

12. A demand meter comprising an interval-demand member which is advanced from a zero position in accordance with a measurement over predetermined intervals of time and reset to its zero position at the end of such intervals, a maximum-demand-measuring part which is advanced from a zero position in accordance with the maximum demand of the interval-demand member over many of such time intervals, a timing motor and means driven thereby for automatically returning said interval-demand member to a zero position at the ends of said predetermined time intervals, manually-controlled means driven by said motor for returning said maximum-demand part to its zero position when desired, and an overrunning clutch between said motor and the above mentioned parts which are driven thereby, whereby the parts normally driven by said motor may be operated manually, independently of said motor.



2,006,322
WINDSHIELD CLEANER BLADE
Erwin C. Horton, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application July 20, 1932, Serial No. 623,625
3 Claims. (Cl. 15—245)

1. A wiper blade comprising a channelled holder, and a laminated yieldable wiper element mounted in the channelled holder, the outer laminated portions of the wiper element having outwardly extending shoulders adjacent the holder edges, the outer sides of the outer laminations ta-

pering from the shoulders outwardly in normally converging planes into the form of feather edges, the inner laminated portion of the wiper element projecting from the tapered edges and cooperating therewith to provide wiping surfaces.

2,006,323
WINDSHIELD CLEANER
Erwin C. Horton, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.
Application July 31, 1933, Serial No. 683,100
9 Claims. (Cl. 15—255)

1. In a motor vehicle having an engine compartment with an engine therein having a rotating part, a windshield and supporting structure adjacent thereto, the combination of a wiper mounted on said supporting structure for angular oscillation over said windshield, a flexible cable operatively connected to said wiper for imparting angular oscillatory movement thereto, a casing in the engine compartment mounted upon the engine, transmission means for converting rotary movement into angular oscillatory movement, said means being mounted in said casing and being connected to said rotating part of the engine and to said flexible cable, for converting the rotary motion imparted thereto by said rotating part into angular oscillatory motion and imparting the latter to the flexible cable.

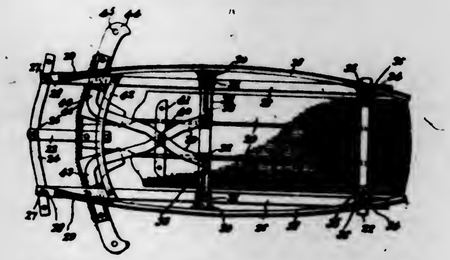
2,006,324
HYDROQUINONE MANUFACTURE
Joseph Schumacher, Peru, Ill., assignor to Carus Chemical Company, a corporation of Illinois
No Drawing. Application November 21, 1934, Serial No. 754,178
6 Claims. (Cl. 260—154)

1. In the reduction of quinhydrone to hydroquinone by ferrous salts, the step of reducing ferric salts to ferrous in the presence of hydroquinone by finely divided iron in the absence of free acid capable of uniting with iron or iron oxide.

2,006,225
SCOOTER AND SLEIGH RUNNER
Albert J. Scheltes, Baltimore, Md.
Application June 8, 1934, Serial No. 729,670
8 Claims. (Cl. 280—23)

1. A sliding vehicle, comprising a platform, a flexible runner mounted for lateral movement beneath the platform, a guide rod rotatably mounted on the platform and having an arm with oppositely extending portions disposed lengthwise of the platform and runner, and spaced levers pivoted at their intermediate portions beneath the platform with one end of each lever connected to an adjacent portion of the runner and with their other ends pivoted to the opposite ends of the arm for swinging the levers in opposite directions when the rod and arm are turned and flexing the runner at spaced points in opposite directions into a continuous longitudinal curve.

2,006,226
FLEXIBLE COASTING SLED
Albert J. Scheltes, Baltimore, Md.
Application June 20, 1934, Serial No. 731,504
9 Claims. (Cl. 280—22)



1. A flexible coasting sled, comprising a body portion, a pair of flexible runners mounted beneath the body portion, front and rear flexing levers connected to the front and rear portions of the runners, a connecting lever pivoted on the body portion and connected to said front and rear flexing levers for actuating the same in opposite directions, and operating means for swinging said levers to flex the runners.

2,006,227
HOSE CLAMP
Albert J. Scheltes, Baltimore, Md.
Application June 20, 1934, Serial No. 732,112
16 Claims. (Cl. 24—19)

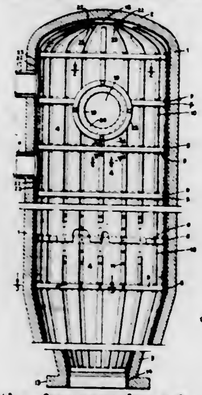
14. A clamp, comprising an object engaging band adapted to be placed about an object to be clamped, an independent flexible element, and gathering means cooperating with the element for spirally winding the element against the band at the side thereof to deform a portion of the band; thereby tightening the other portion of the band about the object.

2,006,228
CENTER BOWING STEERING AND BRAKING SLED RUNNERS
Albert J. Scheltes, Baltimore, Md.
Application July 25, 1934, Serial No. 736,932
14 Claims. (Cl. 280—22)

13. A sled having flexible runners, and control means including a handle having two parts one of each being connected to a runner for independently flexing one or both of the runners to control movements of the sled.

2,006,229
ENCIRCLING BAND TIGHTENER
Albert J. Scheltes, Baltimore, Md.
Application November 12, 1934, Serial No. 752,775
15 Claims. (Cl. 24—19)

1. A band tightener, comprising a plate having an opening therein, a band extending through the opening with one end secured to the plate and looped outwardly therefrom to form a loop at the outer side of the plate, the other end of the band adapted to encircle an object, and expanding means including a winding strip disposed in the looped portion of the band with the free end of the strip extending through the opening in the plate between the latter and the outer side of the band.



2,006,230
COASTING SLED
Albert J. Scheltes, Baltimore, Md.
Application February 21, 1935, Serial No. 7,615
15 Claims. (Cl. 280—22)

3. A coasting sled, comprising a body portion having flexible runners, a front bar connected across the forward ends of the runners, a second bar connected across the intermediate portions of the runners, lever means pivoted to the sled

body and to said bars for causing the same to move in opposite directions, and guide means carried by the sled body and connected to the front bar for shifting the same.

2,006,231

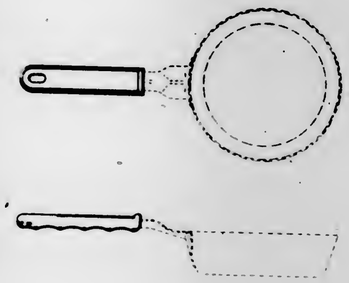
sections to the framework and permitting expansion and contraction thereof.

DESIGNS

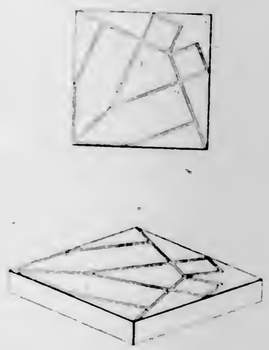
JUNE 25, 1935

96,000
DESIGN FOR A SPOON OR SIMILAR ARTICLE
Grosvenor N. Allen, Charles A. Bennett, and Lloyd E. Rensegger, Oneida, N. Y., assignors to Oneida Limited, Oneida, N. Y., a corporation of New York
Application May 7, 1935, Serial No. 56,720
Term of patent 14 years



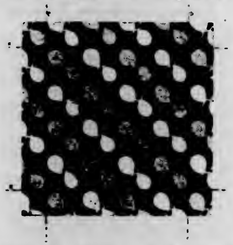
The ornamental design for a spoon or similar article as shown and described.

96,001
DESIGN FOR A BUCKLE
Louis Altersom, New York, N. Y.
Application May 8, 1935, Serial No. 56,733
Term of patent 3½ years



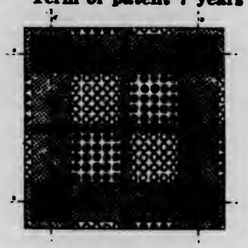
The ornamental design for a buckle, substantially as shown.

96,002
DESIGN FOR A SKILLET OR SIMILAR ARTICLE
Leclare H. Amrine, Chicago, Ill., assignor to Imperial Molded Products Corporation, Chicago, Ill.
Application September 13, 1934, Serial No. 53,270
Term of patent 7 years



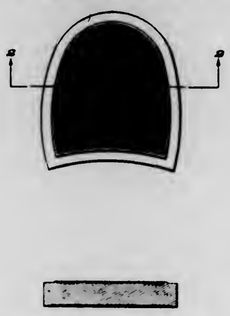
The ornamental design for a skillet or similar article, as shown.

96,003
DESIGN FOR A PAVING BLOCK
Francisco Belda, Benicalap, Spain
Application November 8, 1934, Serial No. 53,930
In Spain August 16, 1934
Term of patent 14 years



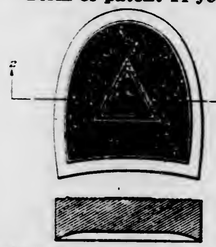
The ornamental design for a paving block, as shown.

96,004
DESIGN FOR A CARPET
Paul V. Beneville, Dumont, N. J., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 6, 1935, Serial No. 56,239
Term of patent 7 years



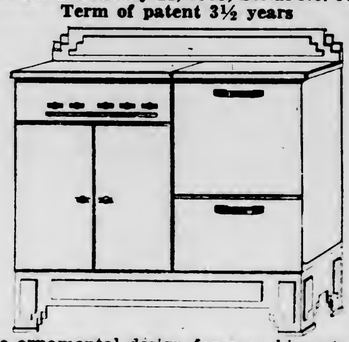
The ornamental design for a carpet, substantially as shown and described.

96,005
DESIGN FOR A CARPET
Paul V. Beneville, Dumont, N. J., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 10, 1935, Serial No. 56,300
Term of patent 7 years



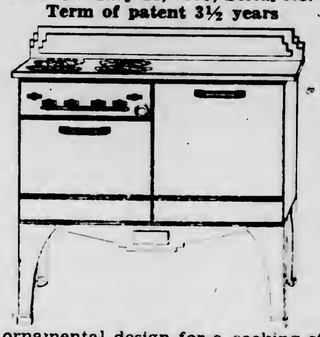
The ornamental design for a carpet, substantially as shown and described.

96,006
DESIGN FOR A SHOE HEEL
Frank Berenstein, Chelsea, Mass., assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass., a corporation of Massachusetts
Application May 3, 1935, Serial No. 56,674
Term of patent 14 years



The ornamental design for a shoe heel as shown.

96,007
DESIGN FOR A SHOE HEEL
Frank Berenstein, Chelsea, Mass., assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass., a corporation of Massachusetts
Application May 3, 1935, Serial No. 56,675
Term of patent 14 years

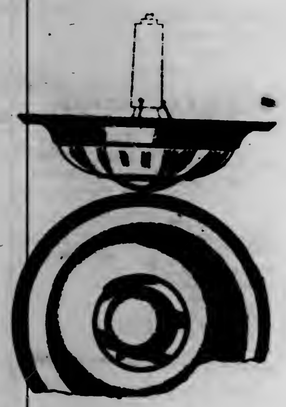


The ornamental design for a shoe heel as shown.

96,008
DESIGN FOR A COOKING STOVE OR SIMILAR ARTICLE
Frank K. Berry and Alfred J. Reedy, Battle Creek, Mich.
Application January 11, 1935, Serial No. 54,816
Term of patent 3½ years

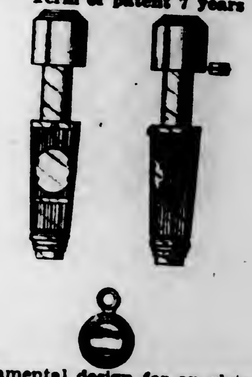
The ornamental design for a cooking stove or similar article, as shown.

96,009
DESIGN FOR A COOKING STOVE OR SIMILAR ARTICLE
Frank K. Berry and Alfred J. Reedy, Battle Creek, Mich.
Application January 11, 1935, Serial No. 54,817
Term of patent 3½ years



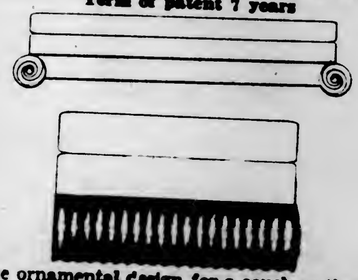
The ornamental design for a cooking stove or similar article, as shown.

96,010
DESIGN FOR A DISPLAY CARD
Alfred Bleich, New York, N. Y.
Application April 6, 1935, Serial No. 56,249
Term of patent 3½ years



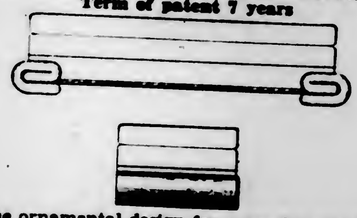
The ornamental design for a display card as shown.

96,011
DESIGN FOR A LIGHTING UNIT
Jacob H. Bittner, New York, N. Y., assignor to Lightolier Company, New York, N. Y., a corporation of New York
Application November 10, 1934, Serial No. 53,961
Term of patent 7 years



The ornamental design for a lighting unit, substantially as shown and described.

96,012
DESIGN FOR AN ELECTRIC HEATER FOR HAIR WAVING
Harry Benat, New York, N. Y., assignor to Harry Benat and Samuel Benat, doing business as Samuel Benat and Bro., New York, N. Y.
Application January 10, 1935, Serial No. 54,786
Term of patent 7 years



The ornamental design for an eletcric heater for hair waving, substantially as shown.

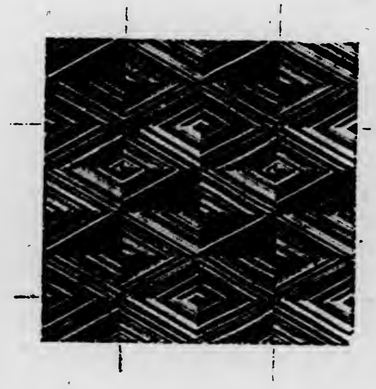
96,013
DESIGN FOR A COUCH OR THE LIKE
Joseph W. Bowersox, Glen Ellyn, Ill., assignor to Superior Felt & Bedding Co., a corporation of Illinois
Application March 23, 1935, Serial No. 56,005
Term of patent 7 years

The ornamental design for a couch or the like, as shown and described.

96,014
DESIGN FOR A COUCH OR THE LIKE
Joseph W. Bowersox, Glen Ellyn, Ill., assignor to Superior Felt & Bedding Co., a corporation of Illinois
Application March 23, 1935, Serial No. 56,006
Term of patent 7 years

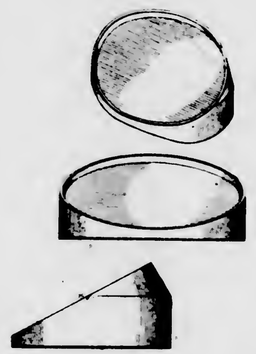
The ornamental design for a couch or the like, as shown and described.

96,015
DESIGN FOR A TEXTILE FABRIC
Andre C. Bruine, Rutherford, N. J., assignor to Roth Fabrics Corp., New York, N. Y., a corporation of New York
Application December 5, 1934, Serial No. 54,284
Term of patent 3½ years



The ornamental design for a textile fabric, substantially as shown and described.

96,016
DESIGN FOR A TEXTILE FABRIC
Andre C. Bruine, Rutherford, N. J., assignor to Roth Fabrics Corp., New York, N. Y., a corporation of New York
Application December 5, 1934, Serial No. 54,285
Term of patent 3½ years

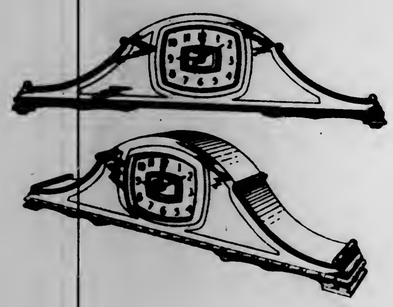


The ornamental design for a textile fabric substantially as shown and described.

96,017
DESIGN FOR A TEXTILE FABRIC
Andre C. Bruine, Rutherford, N. J., assignor to Roth Fabrics Corp., New York, N. Y., a corporation of New York
Application December 5, 1934, Serial No. 54,286
Term of patent 3½ years

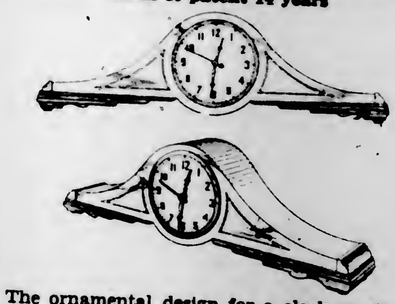
The ornamental design for a textile fabric substantially as shown and described.

96,018
DESIGN FOR A TELEPHONE RECEIVER BASE
Philip J. Cannon, Cincinnati, Ohio
Application March 16, 1935, Serial No. 55,900
Term of patent 7 years



The ornamental design for a telephone receiver base as shown.

96,019
DESIGN FOR A BOTTLE OR SIMILAR ARTICLE
Christopher J. Chamales, Chicago, Ill., assignor to C. A. Zees Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application March 7, 1935, Serial No. 55,760
Term of patent 7 years



The ornamental design for a bottle or similar article, as shown.

96,020
DESIGN FOR A CLOCK OR SIMILAR ARTICLE
Ostilio Ciccarelli, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a corporation
Application April 19, 1935, Serial No. 56,466
Term of patent 14 years

The ornamental design for a clock or similar article substantially as shown and described.

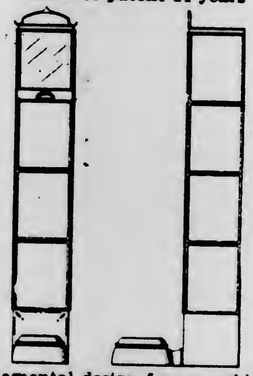
96,021
DESIGN FOR A CLOCK OR SIMILAR ARTICLE
Ostilio Ciccarelli, Bristol, Conn., assignor to The E. Ingraham Company, Bristol, Conn., a corporation
Application April 19, 1935, Serial No. 56,467
Term of patent 14 years

The ornamental design for a clock or similar article substantially as shown and described.

96,022
DESIGN FOR A PENCIL
William R. Cuthbert, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application April 22, 1935, Serial No. 56,499
Term of patent 14 years

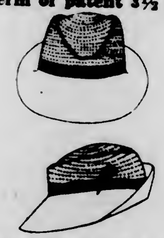
The ornamental design for a pencil substantially as shown and described.

96,023
DESIGN FOR A FOUNTAIN PEN
William R. Cuthbert, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a corporation of Delaware
Application April 22, 1935, Serial No. 56,500
Term of patent 14 years



The ornamental design for a fountain pen substantially as shown and described.

96,024
DESIGN FOR A SHOE
Vincent De Lise, Astoria, N. Y.
Application February 27, 1935, Serial No. 55,642
Term of patent 3½ years



The ornamental design for a shoe, as shown and described.

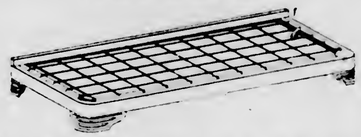
96,025
DESIGN FOR A COMBINED WEIGHING AND ADVERTISING DEVICE
Guy G. Eldman, Houston, Tex.
Application September 4, 1934, Serial No. 53,191
Term of patent 14 years

The ornamental design for a combined weighing and advertising device, substantially as shown.

96,026
DESIGN FOR A HAT
Isidore Eisenberg, New York, N. Y.
Application May 24, 1935, Serial No. 56,993
Term of patent 3½ years

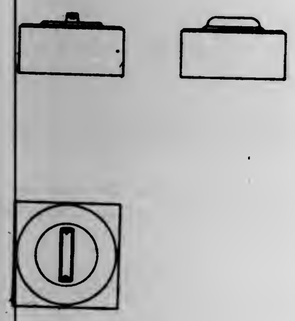
The ornamental design for a hat, substantially as shown and described.

96,027
DESIGN FOR A GAME BOARD
George Ellison, Lynbrook, N. Y.
Application October 22, 1934, Serial No. 53,715
Term of patent 14 years



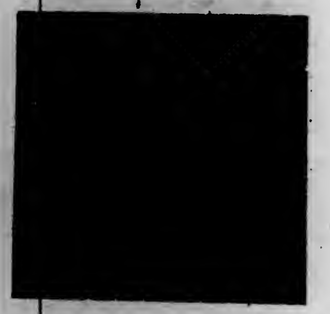
The ornamental design for a gameboard, as shown.

96,028
DESIGN FOR A TEXTILE FABRIC
Curt Erwin Forstmann, Montclair, N. J.
Application May 9, 1935, Serial No. 56,745
Term of patent 14 years



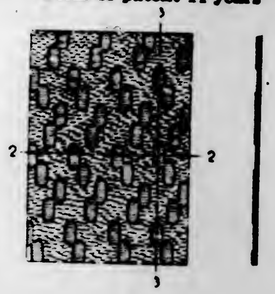
The ornamental design for a textile fabric as shown and described.

96,029
DESIGN FOR A BASE UNIT OF A STUDIO COUCH OR SIMILAR ARTICLE
Martin Fox, Chicago, Ill., assignor to The Seng Company, Chicago, Ill.
Application January 30, 1935, Serial No. 55,152
Term of patent 7 years



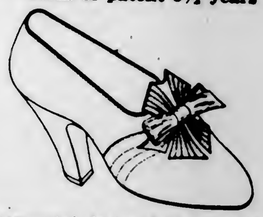
The ornamental design for a base unit of a studio couch or similar article, as shown.

96,030
DESIGN FOR A SHAVING BOWL OR THE LIKE
Charles B. Gage, Tarrytown, N. Y., and Wilbur D. Canaday, Stamford, Conn., assignors to Lentheric Incorporated, New York, N. Y., a corporation of New York
Application December 22, 1933, Serial No. 50,185
Term of patent 14 years



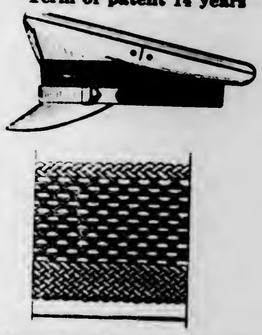
The ornamental design for a shaving bowl or the like substantially as shown.

96,031
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
John F. Gaul, Jr., Clifton, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application December 15, 1934, Serial No. 54,442
Term of patent 14 years



The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

96,032
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
John F. Gaul, Jr., Clifton, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application May 13, 1935, Serial No. 56,809
Term of patent 14 years



The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

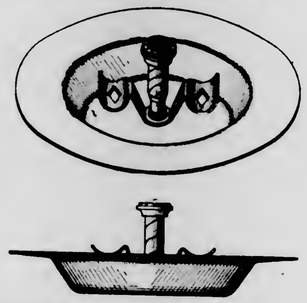
96,033
DESIGN FOR A SHOE
Herman Goldberg, Haverhill, Mass.
Application May 17, 1935, Serial No. 56,889
Term of patent 3½ years

The ornamental design for a shoe as shown.

96,034
DESIGN FOR A MILITARY CAP
Mayer Greenberg, Chicago, Ill.
Application May 1, 1935, Serial No. 56,640
Term of patent 14 years

The ornamental design for a military cap as shown and described.

96,035
DESIGN FOR A BRIDGE FOR EYEGLASSES
Henry W. Grom, Rochester, N. Y., assignor to Artcraft Optical Co., Rochester, N. Y.
Application April 6, 1935, Serial No. 56,244
Term of patent 3½ years



The ornamental design for a bridge for eyeglasses as shown.

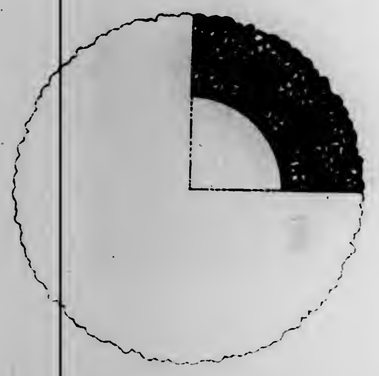
96,036
DESIGN FOR A RADIOCABINET
Arthur C. Haggstrom, Rockford, Ill.
Application May 9, 1935, Serial No. 56,752
Term of patent 7 years

The ornamental design for a radiocabinet substantially as shown and described.

96,037
DESIGN FOR AN ASH TRAY
Russell P. Harshberger, Pasadena, Calif.
Application April 15, 1935, Serial No. 56,383
Term of patent 7 years

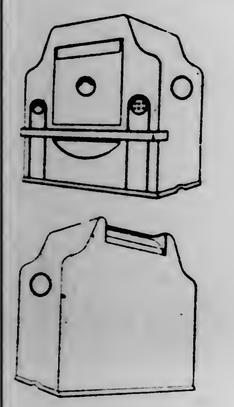
The ornamental design for an ash tray substantially as shown.

96,038
DESIGN FOR DECORATED WRAPPING PAPER
August Hegmann, Newark, N. J.
Application February 26, 1935, Serial No. 55,620
Term of patent 7 years



The ornamental design for decorated wrapping paper, as shown and described.

96,039
DESIGN FOR LEATHER
Hans Hiedemann, Cologne, Germany, assignor to Arrigo E. Marconetti, New York, N. Y.
Application May 3, 1935, Serial No. 56,672
Term of patent 7 years



The ornamental design for leather substantially as shown and described.

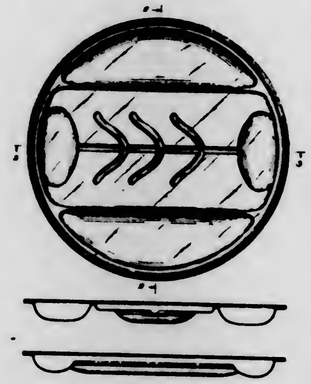
96,040
DESIGN FOR A DOILY
Robert J. Hutt and George A. Hutt, Brooklyn, N. Y., assignors to U. S. Lace Paper Works, Inc., Brooklyn, N. Y.
Application April 20, 1935, Serial No. 56,623
Term of patent 3½ years

The ornamental design for a doily as shown and described.

96,041
DESIGN FOR A MIXING MACHINE CASING
Edith A. Jackson, Larchmont, N. Y., assignor to American Machine & Foundry Company, a corporation of New Jersey
Application January 19, 1935, Serial No. 54,937
Term of patent 14 years

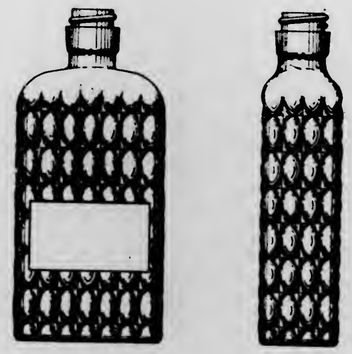
The ornamental design for a mixing machine casing, as shown and described.

96,042
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Adolph C. Jaeger, Port Chester, N. Y.
Application April 20, 1935, Serial No. 56,475
Term of patent 7 years



The ornamental design for a textile fabric or similar article substantially as shown and described.

96,043
DESIGN FOR A SHOE HEEL
Fred C. Lovejoy, St. Louis, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 17, 1935, Serial No. 56,880
Term of patent 14 years

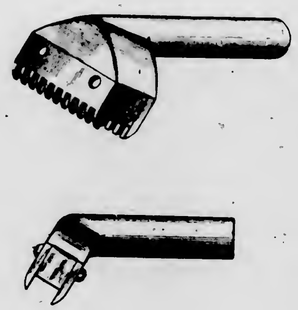


The ornamental design for a shoe heel, as shown.

96,044
DESIGN FOR A PLATTER
Frank J. Mascuch, East Orange, N. J., assignor to Sheffield Silver Co., Jersey City, N. J., a corporation of New York
Application April 15, 1935, Serial No. 56,400
Term of patent 7 years

The ornamental design for a platter as shown and described.

96,045
DESIGN FOR A BOTTLE
Albert C. Meyer, Glenshaw, Pa.
Application March 29, 1935, Serial No. 56,117
Term of patent 7 years

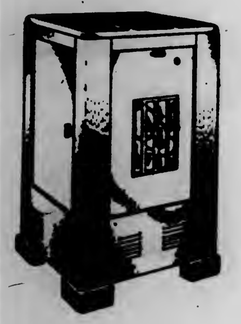


The ornamental design for a bottle, as shown and described.

96,046
DESIGN FOR A RUG
Jens J. Moll and William C. Chapman, Chicago, Ill.
Application March 16, 1935, Serial No. 55,906
Term of patent 7 years

The ornamental design for a rug, as shown and described.

96,047
DESIGN FOR A NOZZLE FOR A SUCTION MACHINE
Clyde S. Morse, Sycamore, Ill.
Application January 19, 1935, Serial No. 54,928
Term of patent 3½ years



The ornamental design for a nozzle for a suction machine, substantially as shown.

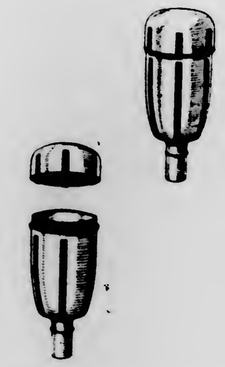
96,048
DESIGN FOR A BOWL OR SIMILAR ARTICLE
Charles Wirt Oldham, Shadyside, Ohio, assignor to Imperial Glass Corporation, Bellaire, Ohio, a corporation of Ohio
Application April 13, 1935, Serial No. 56,344
Term of patent 7 years

The ornamental design for a bowl or similar article as shown.

96,049
DESIGN FOR A HEATER
Ambrose D. Olds, Wichita, Kans.
Application April 6, 1935, Serial No. 56,250
Term of patent 14 years

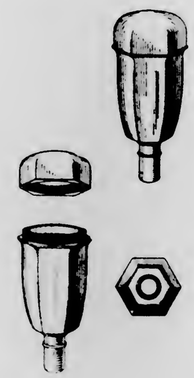
The ornamental design for a heater substantially as shown.

96,050
DESIGN FOR A COMBINED FLASH LIGHT AND UMBRELLA HANDLE OR SIMILAR ARTICLE
Samuel Osterman, New York, N. Y., assignor to Guth, Stern & Co. Inc.
Application April 13, 1935, Serial No. 56,364
Term of patent 7 years



The ornamental design for a combined flash light and umbrella handle or similar article, as shown.

96,051
DESIGN FOR A COMBINED FLASH LIGHT AND UMBRELLA HANDLE OR SIMILAR ARTICLE
Samuel Osterman, New York, N. Y., assignor to Guth, Stern & Co. Inc.
Application April 13, 1935, Serial No. 56,365
Term of patent 7 years

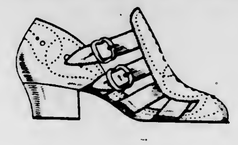


The ornamental design for a combined flash light and umbrella handle or similar article, as shown.

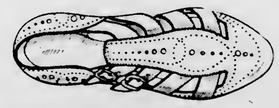
96,052
DESIGN FOR A COMBINED APPAREL HOLDER AND UMBRELLA HANDLE OR SIMILAR ARTICLE
Samuel Osterman, New York, N. Y., assignor to Guth, Stern & Co. Inc.
Application April 13, 1935, Serial No. 56,366
Term of patent 7 years

The ornamental design for a combined apparel holder and umbrella handle or similar article, as shown.

96,053
DESIGN FOR A COMBINED APPAREL HOLDER AND UMBRELLA HANDLE OR SIMILAR ARTICLE
Samuel Osterman, New York, N. Y., assignor to Guth, Stern & Co. Inc.
Application April 13, 1935, Serial No. 56,367
Term of patent 7 years



The ornamental design for a combined apparel holder and umbrella handle or similar article, as shown.



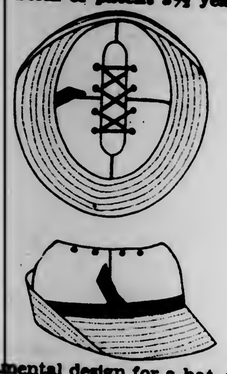
96,054
DESIGN FOR A CRAVAT HOLDER
Joseph O. Pollack, Chicago, Ill.
Application April 1, 1935, Serial No. 56,140
Term of patent 7 years

The ornamental design for a cravat holder, as shown and described.

96,055
DESIGN FOR A SHOE
Rosette Rome, New York, N. Y.
Application May 13, 1935, Serial No. 56,798
Term of patent 3½ years

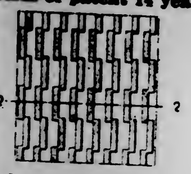
The ornamental design for a shoe, as shown.

96,056
DESIGN FOR A FINGER RING
Abraham Sager, Chicago, Ill.
Application April 6, 1935, Serial No. 56,237
Term of patent 14 years



The ornamental design for a finger ring as shown.

96,057
DESIGN FOR A SHOE
Jack Sesco, New York, N. Y.
Application January 21, 1935, Serial No. 54,969
Term of patent 3½ years



The ornamental design for a shoe as shown and described.

96,058
DESIGN FOR A HAT
Samuel Schoner, New York, N. Y.
Application May 24, 1935, Serial No. 56,995
Term of patent 3½ years

The ornamental design for a hat, substantially as shown.

96,059
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
Albert Schoenacher, Passaic, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application February 6, 1935, Serial No. 55,275
Term of patent 14 years

The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

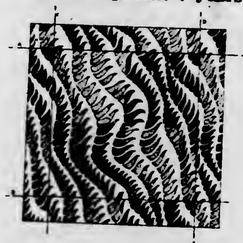
96,060
DESIGN FOR A GAME BOARD OR SIMILAR DEVICE
Hyman Schwartz, New York, N. Y.
Application April 15, 1935, Serial No. 56,230
Term of patent 7 years

The ornamental design for a game board or similar device, as shown.

96,061
DESIGN FOR AN ELECTRON DISCHARGE DEVICE
Terry M. Shrader, West Summit, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corperation of Delaware
Application April 20, 1935, Serial No. 56,477
Term of patent 14 years

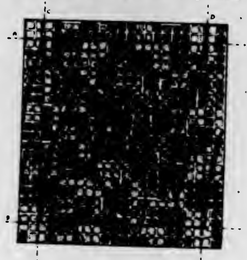
The ornamental design for an electron discharge device substantially as shown.

96,062
DESIGN FOR AN ELECTRON DISCHARGE DEVICE
Newell R. Smith, Bloomfield, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application April 20, 1935, Serial No. 56,478
Term of patent 14 years



The ornamental design for an electron discharge device substantially as shown.

96,063
DESIGN FOR A BUTTON
George T. Thorne, Detroit, Mich., assignor to Universal Button Fastening & Button Company, Detroit, Mich., a corporation of Michigan
Application April 24, 1935, Serial No. 56,529
Term of patent 3½ years



The ornamental design for a button as shown.

96,064
DESIGN FOR A CARPET
John S. Travis, Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 10, 1935, Serial No. 56,301
Term of patent 7 years

The ornamental design for a carpet, substantially as shown and described.

96,065
DESIGN FOR A CARPET
John S. Travis, Long Island City, N. Y., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 11, 1935, Serial No. 56,325
Term of patent 7 years

The ornamental design for a carpet, substantially as shown and described.

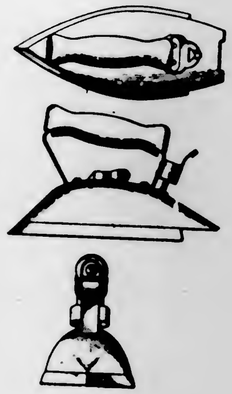
96,066
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 11, 1935, Serial No. 56,786
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown and described.

96,067
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 22, 1935, Serial No. 56,958
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

96,068
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 22, 1935, Serial No. 56,959
Term of patent 3½ years

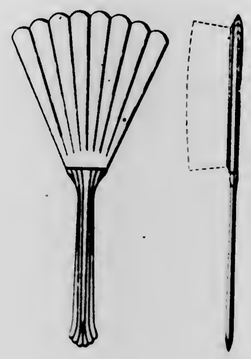


The ornamental design for a shoe, substantially as shown.

96,069
DESIGN FOR A RUG
Ignatius J. Vetter, New York, N. Y., assignor to Bigelow-Sanford Carpet Co., Inc., a corporation of Massachusetts
Application April 6, 1935, Serial No. 56,242
Term of patent 14 years

The ornamental design for a rug, substantially as shown and described.

96,070
DESIGN FOR AN ELECTRIC FLATIRON
Gilbert Waage, Chicago, Ill.
Application April 27, 1935, Serial No. 56,604
Term of patent 3½ years

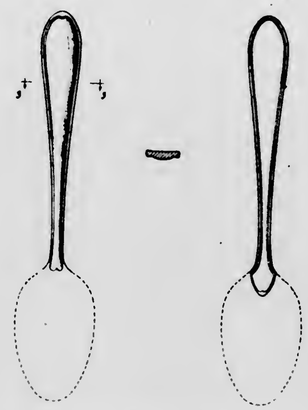


The ornamental design for an electric flatiron, substantially as shown.

96,071
DESIGN FOR A RAZOR BLADE SHARPENER
Albert F. Weiss, University City, Mo.
Application March 30, 1935, Serial No. 56,131
Term of patent 14 years

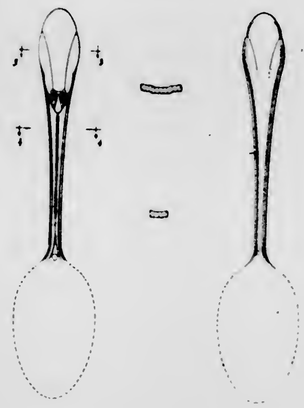
The ornamental design for a razor blade sharpener, as shown and described.

96,072
DESIGN FOR A BRUSH OR SIMILAR ARTICLE
Albert Wewetser, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application April 22, 1935, Serial No. 56,493
Term of patent 7 years



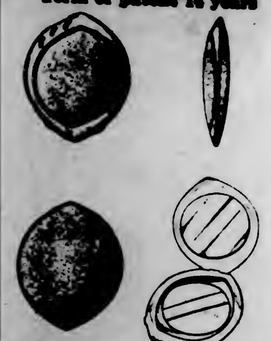
The ornamental design for a brush or similar article, as shown and described.

96,073
DESIGN FOR A VANITY CASE
Albert Wewetser, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application May 2, 1935, Serial No. 56,659
Term of patent 7 years



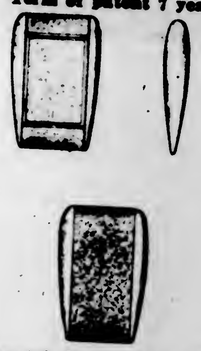
The ornamental design for a vanity case, as shown.

96,074
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
F Russell Woodward, Attleboro, Mass., assignor to Gorham Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application May 9, 1935, Serial No. 56,758
Term of patent 14 years



The ornamental design for a spoon or other article of flatware substantially as shown.

96,075
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
F Russell Woodward, Attleboro, Mass., assignor to Gorham Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application May 9, 1935, Serial No. 56,759
Term of patent 14 years



The ornamental design for a spoon or other article of flatware substantially as shown.

96,676
DESIGN FOR A VANITY CASE OR SIMILAR ARTICLE
David H. Zell, Brooklyn, N. Y.
Application May 2, 1935, Serial No. 56,667
Term of patent 14 years

The ornamental design for a vanity case or similar article, substantially as shown.

96,677
DESIGN FOR A VANITY CASE OR SIMILAR ARTICLE
David H. Zell, Brooklyn, N. Y.
Application May 2, 1935, Serial No. 56,668
Term of patent 7 years

The ornamental design for a vanity case or similar article, substantially as shown.
